After six years of intensive plant staking, and the trial and discarding of thousands of individual plant selections, Hal Mills, our plant breeder, has succeeded in getting true type plants on Bloomsdale Farm. We therefore offer, for the first time, the only Certified Pepper Seed ever produced.

This Pepper Seed will be dyed green for identification and sold in 1/2, 1 lb. lithographed cardboard packages, wrapped in moistureproof cellophane, and sealed with a yellow certificate from The Pennsylvania Department of Agriculture, located at Harrisburg, Pa.

Ruby King (Black Strain) Prices

Packets (Without Certificate) $ .15
Ounce (Without Certificate) 1.00
1/2 Pound 3.00
1 Pound 6.00

Florida Giant 1 Pound 9.00

Be sure to try some Certified Pepper Seed.

Hollow Crowns—All our Certified Pepper strains have been selected for hollow crowns. This is a distinct advantage to the housewife in preparing peppers for stuffing. By cutting off the top with one operation, the stem and core lift right out. Try it

Ruby King (Black Strain)—An exceedingly fine selection in Ruby King. Prolific, early vines, withstanding disease conditions. Fruits are long, hollow-crowned, thick fleshed, and very smooth for Ruby King.

World Beater (Landreths' Strain)—Selected from World Beater for large, thick-fleshed fruits, hollow-crowned and smooth. About as long as Florida Giant.

California Wonder (Landreths' Strain)—These fruits are very thick-fleshed, large in size, very smooth and hollow-crowned, short and blocky.

Florida Giant—A late-maturing strain of California Wonder. Fruits are longer than California Wonder, otherwise the same. Very smooth and very thick fleshed.

(See Pages 57, 58, 59 for further description of Peppers.)
IT is with much pleasure we present to our friends the 1937 edition of our Catalogue. We have listed only the best and most called for varieties of Vegetable, Grass and Flower Seeds available today, and have described them accurately and clearly in as few words as possible. We hope you will benefit from our efforts.

D. LANDRETH SEED CO.
Bristol, Pa.

Burnet Landreth, Jr., Pres. & Treas.
S. Phillips Landreth . . . . Secretary
David Landreth . . . . Assistant Sec.

Of the fourth generation

Burnet Landreth, 3rd, Charles H. Landreth, Edward S. Landreth,

Of the fifth generation

From father to son for five generations in the direct male line is unequalled in the Seed Business in the United States and equalled only by a very few firms or corporations in any other business.
How and Where to Buy LANDRETH Seeds

Almost always you will find Landreth Seeds in one of the finest and most reputable stores near you. Perhaps the name of your local dealer is printed on the front cover of this catalogue. He has a wide selection of flower, vegetable, and grass seeds displayed for quick selection.

We have many seeds not listed in this catalogue. Don’t hesitate to ask for them.

The simplicity of the LANDRETH CATALOGUE rests in the fact that it is so easily understood. It is arranged alphabetically and contains straightforward, concise descriptions in order that the seed or plant may be identified at once.
To add charm to your 1937 garden, we suggest the following varieties—(So new, they’re a year ahead)

**MARIGOLD □**
Crown of Gold Collarette

All-America Gold Medal for 1937. Entirely new type of flowers. Chrysanthemum-like crown of beautifully incurved petals, surrounded by collar of broad petals of brilliant golden orange. Entirely odorless foliage. Height 2½ ft.

Pkt. 25¢

**CENTAUREA □ (Cornflower)**
Jubilee Gem

All-America Award-of-Merit for 1937. Superb English dwarf bushy type, not over 12 inches tall, and excellent for border use as well as for cutting. Large deep blue flowers. As an edging plant, a border plant, or for ground work in formal beds of Roses, etc., it is admirable. It has foliage distinct from all other Cornflowers, forming a tufted mass of bright green, contrasting well with the dark but vivid double blue flowers.

Pkt. 25¢
LANDRETHS' NOVELTIES

MARIGOLD
Gigantea Sunset Giants

The largest Marigold known to floriculture. A new race with flowers 5-7 inches across, in shades of vivid orange, dark and light yellow and primrose. Sweet-scented, too. 35% will come single, but the excellence of the doubles will compensate for this. Has long stems for cutting. Flowers are loosely formed, very full-centered, with broad, heavy petals gracefully overlapping to make a flower of great depth, and even larger than Dahlia Flowered Zinnias.

Pkt. 15c

Marigold—Sunset Giants Mixed

PETUNIA
Flaming Velvet

All-America Gold Medal for 1936. Rich, velvety blood-red about 15 inches tall. 150 seeds for 25c

Morning Glory Rose Marie Double Pink

Morning Glory Rose Marie Double Pink

- MORNING GLORY
Double Pink "Rose Marie"

Early, free-flowering clear deep rose double. Being double gives it the appearance of being open even after all other Morning Glories have closed for the day. 1/2 oz. 45c pkt. 10c
COSMOS □
Sensation Mixed
All-America Award-of-Merit for 1936. Early mammoth flowered, 4 feet tall, flowers 4-5 inches across. Disbud for largest flowers. Plant is extremely early flowering, blooming 10 weeks from time of planting. Mixture contains white and shades of rose and pink.
Pkt. 16c

ZINNIA □
Fantasy Type "Stardust"
All-America Award-of-Merit for 1937. First separate color of this group. Beautiful clear golden yellow and 100% true.
Pkt. 26c

ESCHSCHOLTZIA □
(California Poppy)
• New Double Choice Mixed
This strain produces 60% double flowers of a beautiful waved type. Strong stems, holding the flowers well above the attractive blue-green foliage.
Pkt. 10c

HOLLYHOCK ○
• Double Orange Prince
A robust grower in a rich apricot-orange double type. This color not previously known to this genus, and is an ideal background subject. Pkt. 15c

VISCARIA □
• Blue Pearl
A new introduction from England. Semi-dwarf, and pure lavender-blue without the characteristic white-eye, this plant is ideal for mass effects. Viscarias are becoming extremely popular, and some of the most outstanding bedding effects we have seen, have resulted from broadcast sowings. ½ oz. 50c pkt. 15c

FOR COMPLETE FLOWER SEED LIST SEE PAGE 78
SPECIAL NOTICE — The D. Landreth Seed Company gives no warranty, express or implied, as to description, quality, productiveness or any other matter of seeds (Bulbs or Plants) it sells and will not be responsible for the crop. All sales subject to loss or damage by fire or other contingencies beyond our control.

ARTICHOKE
(FRENCH SEED)

Two Ounces of Seed Will Sow 100 Yards of Row

Seed breaks ground in about 7 days. One inch high in 15 days under most favorable circumstances in greenhouse

This plant may be grown from seed sown when the Cherry is in bloom or from suckers taken from established plants. If the seed be sown, the plants may be raised in beds and transplanted. The seedlings or sets should be planted out in rows at four feet apart and eighteen inches in the row.

Success with Artichoke in the United States cannot be expected north of the Cotton Belt.

Large Green Globe. The variety which is so popular on the market today. Thousands of acres are now being grown to perfection in California. Heads green, elongated, and plants spiny.

Pkt. 5c oz. 40c 1 lb. $1.35 lb. $4.50

ASPARAGUS (SEED AND ROOTS)

Sow seed in temporary location and let stand for two years; Eight Ounces will plant 100 Yards of Row; or Fifteen Pounds per Acre. Set 4000 two-year-old Roots to the Acre. Seed breaks ground in about 15 days. One inch high in 19 days under most favorable circumstances in greenhouse

If roots are purchased, be sure and get large two-year-old. Do not waste time and money on small roots. Set them in trenches dug about 12 to 16 inches deep; then fill up with about 2 inches manure with two inches of earth on top of the manure, so that it will not burn the plants in any way. Then set the plants 18 inches part in the row, rows 4 to 5 feet apart, and cover them with about 3 inches of earth, and gradually work in earth during the Summer so that by Fall the trench will be level with the ground. When well planted, fertilized, and limed, a cutting of shoots can be made about three times the second year after planting; cutting oftener than this is injurious.

If seed is planted, it will take at least three years to obtain the first cutting, and then only a small one the third year. While, if two-year-old roots are planted, the same result will be obtained in one full year. Asparagus beds if well cared for are good from twelve to fifteen years from first cutting.

Palmetto Seed. Early prolific type. The Asparagus of the Southern Seaboard, first grown in South Carolina. Pkt. 5c oz. 10c 1 lb. 25c lb. 70c

Palmetto Roots—2-year-old.
Per 100 $1.60 per 1000 $11.00

Mary Washington Seed—(Is rustproof and surprisingly superior.) Originated at the Massachusetts Experimental Station, the male plants bearing the name Washington and the two female plants Martha and Mary, these three being the parents of this variety wherever sold. It is claimed that both are highly resistant to rust and blight. The shoots are long without branching, oval in the cross-section, dark green, tight buds and rather late in maturing. It will resist hot weather without blowing out. It is unquestionably the best Asparagus ever sold; a very large producer of extraordinarily good shoots.

Pkt. 5c oz. 15c 1 lb. 30c lb. 85c

Mary Washington Roots—2-year-old.
Per 100 $1.75 per 1000 $12.00
**BRUSSELS SPROUTS**

One Ounce of Seed Will Sow 100 Yards of Row. Seed breaks ground in about 4 days. One inch high in 7 days under most favorable circumstances in greenhouse. A variety of the Cabbage family, possessing the peculiarity of bearing upon its stem or stalk from 50 to 100 buds resembling miniature Cabbage heads. The leaves composing these heads resemble Savoy Cabbage in their crumpled texture and also in their color. The heads or buds, from 1 to 2 inches in diameter, form one of the most delicious garden vegetables, only equaled by the Cauliflower.

**Long Island Improved—90 Days.** A leading variety of one of the most popular Winter vegetables. Very choice tall stalks, 50 to 100 large buds, 1 to 2 inches in diameter. The development of the buds can be hastened and enlarged by cutting away ten or more leaves from the stalk when three-quarters grown.

- **Pkt. 6c**
- **oz. 26c**
- **½ lb. 66c**

---

**BROCCOLI**

One Ounce of Seed Will Sow 100 Yards of Row. Seed breaks ground in about 4 days. One inch high in 7 days under most favorable circumstances in greenhouse. A plant much resembling the Cauliflower, and like it derived from the wild Cabbage. Broccoli requires a longer season to develop than Cauliflower. It has more numerous and stiffer leaves, and the heads are smaller. The seed is best sown in Midsummer and Autumn, and the plants carried over the Winter for planting out in Spring.

**Early Green Calabrese or Italian.—65 Days.** This is a so-called new vegetable introduced into the United States in the last few years, but has been well known in Italy for generations. The Italian population in the United States has taken to it very freely, as have all users of vegetables. It should be sown very early in the Spring and marketed in July and August. This vegetable bears a succession of deep green heads, about 5 inches long.

- **Pkt. 6c**
- **oz. 30c**
- **½ lb. $1.00**
- **lb. $3.25**

**St. Valentine—150 Days.** Large white head resembling Cauliflower. We offer an especially fine strain of Early White Broccoli, and strongly recommend its more general culture.

- **Pkt. 6c**
- **oz. 40c**
- **½ lb. $1.35**
- **lb. $4.50**

---

**Calabrese Broccoli**

**Mary Washington Asparagus**
**BUSH BEANS**

The Garden Bean was probably first cultivated in Western Asia and was known in Rome about 2000 years ago. Average Height of Vine, 15 inches. 2 lbs. Will Plant 100 Yds.; 80 lbs. per Acre. Seed breaks ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse. Plant when the apple tree is in bloom, and repeat as frequently as necessary until within fifty days of the average date of frost. In field culture sow in drills at two and a half to three feet apart. In garden culture, when the cultivation is done by hand, the rows may be twenty-four inches apart. The seed should be sown in such quantity as under ordinary circumstances to warrant one bean vine to every two or three inches. If closer than this, their production will be impaired. Yield about 125 to 150 bushels of green pods for market per acre.

**Why Plant Varieties with Strings? We Suggest Planting Only Stringless Types.** Beans are one of the most desirable and easily cultivated vegetables that can be raised in the family garden. In our opinion there are entirely too many varieties of Bush or Snap Beans on the market and without regard to stock on hand, or to price, etc., we recommend for the family garden the following as the best varieties:

1. **Landreths' Stringless Green Pod, Giant Stringless Tendergreen** for the best long, meaty, round and flat pod, stringless, wax bean. 
2. **Bountiful** for the best flavored, meaty, long, stringless green flat pod. 
3. **Landreths' Extra Early Stringless Red Valentine** in place of the old style. 
4. **Pencil Pod Wax** and Brittle Wax for the best round, long, meaty, stringless, wax bean. 
5. **Wardwell's Kidney Wax, Sure Crop** or Landreths' Top Notch Golden Wax for the best, long, meaty, flat pod, stringless, wax bean.

### GREEN PODS

<table>
<thead>
<tr>
<th>Variety</th>
<th>Days</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Black Valentine, Stringless</strong></td>
<td>50</td>
<td>Color of seed black, shape long and slim, purple blossoms, vines 16 to 18 inches tall, pods half round to round. Slightly curved, absolutely stringless. Six to 6½ inches long, color medium green, averaging 6 or 7 beans to the pod. Very prolific, extremely desirable for early planting, very hardy, productive, a most excellent shipper; a decided improvement over the old style stringy Black Valentine. Four or five days earlier than Stringless Red Valentine.</td>
</tr>
<tr>
<td><strong>Black Valentine or King of the Early</strong></td>
<td>50</td>
<td>Pods are absolutely stringy, nearly straight, dark green and same general character but not so good as the new Stringless Black Valentine.</td>
</tr>
<tr>
<td><strong>Bountiful</strong></td>
<td>50</td>
<td>Vines 16 inches high, bushy and erect. Color of seed, light yellow with brownish color about eye. Pods, large, flat, 6 to 6½ inches long containing 6 or 7 kidney shaped beans. Color of pods, light green, absolutely stringless, slightly fibrous, always tender. One of the best for both market and private gardens. The earliest and most tender of the strictly flat stringless pods, being in a class by itself.</td>
</tr>
<tr>
<td><strong>Dwarf Horticultural, Speckled Cranberry, or Ruby</strong></td>
<td>56</td>
<td>Pods resemble Horticultural Pole. Height of vine, 14 inches. Pods flat, broad, almost straight, absolutely stringless, dashed with red as they ripen. About 5 inches long, averaging 5 beans to the pod.</td>
</tr>
<tr>
<td><strong>French's Horticultural</strong></td>
<td>70</td>
<td>Later than the Dwarf Horticultural. Color of seed, cream mottled purple. Height of vine, 22 inches. Pods flat, straight to slightly curved, fibrous stringy. Vines all show a running tendency, making a wild appearance; therefore, much more vigorous than Dwarf Horticultural, but not as productive. Pods all green until quite ripe, when they are dashed with a brilliant red or carmine. Valuable as a shell bean, averaging 6 or 7 beans to the pod.</td>
</tr>
<tr>
<td><strong>Full Measure</strong></td>
<td>58</td>
<td>Seed speckled mahogany color. Height of vine, 14 to 16 inches. Average 6 beans to pod. Foliage slightly larger than Landreths' Stringless Green Pods, and more of a yellowish green. Pods average 6 inches long, more curved than Stringless Green Pods, absolutely stringless, possibly more green in color than in Full Measure. Pods 6½ to 7 inches long, color is a little darker than Full Measure, but is yellowish green. Not so early by 2 or 3 days as the Stringless. Pods round, meaty, similar to Stringless but slightly straighter and narrower. A showy pod, about 6 inches long, containing 6 or 7 beans to the pod.</td>
</tr>
<tr>
<td><strong>Giant Stringless Green Pod</strong></td>
<td>56</td>
<td>Color of seed, yellow. Long, cylindrical. Height of vine, 13 to 15 inches. Foliage resembles Full Measure, but is yellowish green. Not so early by 2 or 3 days as the Stringless. Pods round, meaty, similar to Stringless but slightly straighter and narrower. A showy pod, about 6 inches long, containing 6 or 7 beans to the pod.</td>
</tr>

LANDRETHS' STRINGLESS GREEN POD—54 Days. This bean was propagated from an individual plant Trial Ground selection from the Burpee's Stringless Green Pod. We made the selection twelve years ago from one individual plant and have propagated it ever since, so that our stock is the product of this plant. The color of the seed is brown, kidney shaped; does not show the seed in the pod as the old Stringless; vine is more erect with a darker foliage and a longer slimmer pod than the old type of Burpee's Stringless; pods and vines stay green longer than the original type; pods six to eight inches long do not turn yellow, slightly curved, meaty, absolutely stringless and free from fibers. This is undoubtedly the best round podded bean in the market today for home garden, market gardeners, or canners. It is much superior to the Giant Stringless. The vine is 17 to 18 inches high with 7 or 8 beans in a pod. This year it averaged over 17 to one planted in Idaho with us when Bountiful only averaged 9 to 1 planted. The most blight resistant Bean on the market today. For Canner's use will produce 10% to 15% more pods in weight than any other bean. We cannot recommend Landreths' Stringless Green Pod too highly. In sections where we have grown this bean it has produced an average of five bushels to the acre more dry beans than any other. We can say justly it is the best, most disease resistant and most productive Bean in existence today.

\[ \frac{1}{2} \text{ lb.} \ 16c \ \text{lb.} \ 26c \ \text{5 lbs.} \ 1.05 \ \text{10 lbs.} \ 1.96 \]

Low's Champion or Dwarf Red Cranberry—56 Days. Height of vine, 11 to 13 inches. Foliage, dark green. Very large, almost round, crimson seed. Pods 5 inches long, flat, deep green, stringless, broad, almost straight, very tender, 5 or 6 beans in the pod. An excellent bean for canning. Also used as a Shell Bean. \[ \frac{1}{2} \text{ lb.} \ 20c \ \text{lb.} \ 30c \ \text{5 lbs.} \ 1.25 \ \text{10 lbs.} \ 2.30 \]

New Stringless or Tendergreen—54 Days. Color of seed resembles Refugee Stringless. Height of vine, 17 inches, not quite as dark foliage as Landreths' Stringless. Pods 6 inches long, round, almost straight, meaty. 5 or 6 beans in a pod. Not as productive as Landreths' Stringless. Resembles Full Measure, but harder and more dependable. We undoubtedly take the place of Full Measure with Market Gardeners and Canners.

\[ \frac{1}{2} \text{ lb.} \ 16c \ \text{lb.} \ 26c \ \text{5 lbs.} \ 1.05 \ \text{10 lbs.} \ 1.96 \]

LANDRETHS' EXTRA EARLY STRINGLESS RED VALENTINE—54 Days. This is an "old bean in a new pod," as the Extra Early Red Valentine was catalogued by the Landreths first in 1832. After most diligent work for six years in our trial grounds, we have produced a bean the same color, not so curved, the same size, in all respects as the old Extra Early Red Valentine, except it is stringless and will fill a long felt want, as the Extra Early Red Valentine is one of the best known beans cultivated in the United States and considered by many growers to be of superior flavor to any other bean in the market. It is productive, round podded, curved, stringless, free from fibers, and of excellent quality. Our new stringless variety is much superior for the home garden or shipping purposes, especially for the Southern States where the old Extra Early Red Valentine has been the most popular bean. We now sell twice as many of the Stringless Red Valentine as the old type. It is in every way equal to the old type Red Valentine and better because it is stringless. We developed this and are the first seedsmen to sell a Stringless Red Valentine.

\[ \frac{1}{2} \text{ lb.} \ 15c \ \text{lb.} \ 25c \ \text{5 lbs.} \ 1.05 \ \text{10 lbs.} \ 1.96 \]

Red Valentine Extra Early—54 Days. Color of seed, red mottled. Foliage, resembling Black Valentine, of a yellowish green. Height of vine, 14 to 15 inches. Pods, 4 1/4 inches long, almost round, curved, cylindrical with a crest in back, light green, semi-transparent, and stringy, averaging 5 or 6 beans in a pod. One of the old standbys of good flavor, still very popular for family and market gardeners. Although stringy it is tender, fleshy, of good quality and appearance, a long keeper.

\[ \frac{1}{2} \text{ lb.} \ 16c \ \text{lb.} \ 26c \ \text{5 lbs.} \ 1.05 \ \text{10 lbs.} \ 1.96 \]

Refugee Stringless (Roger's)—74 Days. For years the trade has been looking for a Stringless Bean having the many excellent qualities of Late Refugee or 1000 to 1. We now offer such a variety in our unsurpassed stock of Stringless Refugee. Absolutely stringless, fully as hardy and productive as the old Late Refugee and retaining all the good qualities of that sort. Vine 15 to 18 inches tall. Pods, 5 inches long, round, meaty, slightly curved and containing 5 or 6 beans which are the same color as Late Refugee. Very popular with canners.

\[ \frac{1}{2} \text{ lb.} \ 15c \ \text{lb.} \ 25c \ \text{5 lbs.} \ 1.05 \ \text{10 lbs.} \ 1.96 \]
BUSH BEANS—Green Pods Continued

Tennessee Green Pod, Brown Bunch or Dwarf
Kentucky Wonder—62 Days. Color of seed yellowish brown, flat. Height of vine, 12 to 14 inches. Dark green foliage. Inclined to sprawl considerably. Pods stringy, flat, broad, productive, almost straight, about 8 to 9 and sometimes 11 inches long, wrinkled and slightly depressed between each of the 7 or 8 seeds in the pod. Stock very superior to the average.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

GROCERY BEANS
(Used only as dry beans for stewing or baking)

Navy or Boston Pea—60 Days. The bean which next to the “Sacred” Codfish made Boston famous. A little more dwarf than the Marrow in habit. Pods about 4 inches long, containing 5 to 7 small almost round white beans. Productive, 25 to 30 bushels to an acre being commonly raised.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

Red Kidney—60 Days. Height of vine, 20 to 22 inches. Length of pod 6 to 7 inches, containing 5 or 6 red kidney shaped beans to every pod. Pods flat, broad, stringy, straight, with very little meat. Only used in dry state.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

White Marrow or Cranberry—60 Days. Height of vines, about 18 inches. Two days earlier than White Kidney. Vines coarse and rank in growth with a tendency to run. Pods stringy, flat, straight, 6 inches long. Average 5 or 6 almost round, white beans in a pod. Used for baking.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

WAX OR GOLDEN PODDED

Currie’s Rustproof Wax—50 Days. Height of vine, 15 inches. Color of seed, purplish brown. Pods similar in shape to Golden Wax, only longer. Pods, light yellow, stringy, flat, almost straight, about 6 inches long, containing an average of 4 or 5 beans in a pod. A great favorite with truckers in New Jersey on account of its earliness, but not as desirable as the Stringless Sure Crop Wax.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

Davis Kidney Wax Stringless—52 Days. Height of vine 15 to 18 inches, beans large, white, kidney shaped. Length of pod 6 to 7 inches, containing 5 or 6 beans. Pods handsome, long, flat, almost straight, very stringless, light yellow in color, productive. A decided improvement over the old style Davis which was stringy.

\[ \frac{1}{2} \text{ lb.} \ 20 \text{c lb.} \ 30 \text{c lb.} \ 5 \text{ lbs.} \ 1.25 \ 10 \text{ lbs.} \ 2.30 \]

Improved Rustproof Golden Wax—50 Days. Height of vine, 12 to 14 inches. Pods, 4 to 4½ inches long, almost straight, flat, broad, absolutely stringless, meaty and fiberless, containing 4 or 5 beans in a pod. Pods light yellow. Seed medium sized, oval, two-thirds of the surface being white, covered with shades of purplish red around the eyes. See Landreths’ (New) Top Notch Golden Wax, a 1936 introduction.

\[ \frac{1}{2} \text{ lb.} \ 20 \text{c lb.} \ 30 \text{c lb.} \ 5 \text{ lbs.} \ 1.25 \ 10 \text{ lbs.} \ 2.30 \]

LANDRETHS’ DELICIOUS WAX—54 Days. This is a splendid, very productive, round podded, meaty, fiberless, Stringless Wax Bean, with extremely healthy vines. This Stock was selected very carefully from Stringless Green Pod in our Trial Ground at Filer, Idaho. It is the same in every respect as the Stringless Green Pod except that the Pod is a Wax instead of a Green Pod. This bean should supersede the Improved Golden Wax as it is a much better quality. The pods are round, about 5 inches long, and resemble Stringless Green Pod, except they are slightly shorter and yellow. The dry Seed being identical in appearance to the Stringless Green Pod.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]

LANDRETHS’ TOP NOTCH GOLDEN WAX—50 Days. Landreths’ Top Notch Golden Wax was developed by us in our trial grounds at Filer, Idaho. It is a hand cross between the old style Grenell’s Improved Rust Proof Golden Wax and our Landreths’ Stringless. The character of the vine in all respects is identical to the Grenell’s strain of Golden Wax. The beans are decidedly more white than the old other varieties were practically destroyed. The pods are round, a much better quality. The pods are round, about 5 inches long, and resemble Stringless Green Pod, except they are slightly shorter and yellow. The dry Seed being identical in appearance to the Stringless Green Pod.

\[ \frac{1}{2} \text{ lb.} \ 15 \text{c lb.} \ 25 \text{c lb.} \ 5 \text{ lbs.} \ 1.05 \ 10 \text{ lbs.} \ 1.95 \]
LANDRETHS' LAWN GRASS SEED PRODUCES BEAUTIFUL TURF

BUSH BEANS—Wax or Golden Podd ed

Continued

A 1936 Landreth Introduction. Old Style Golden Wax Pod on left. Landreths' New Style Top Notch Golden Wax on right

New Kidney Wax—52 Days. This is, we believe, one of the best introduced in recent years, because, while the seed resembles Round Pod Kidney Wax, which is dangerous because of possible mix-ups, it is white in color except for a small dark eye, making it desirable for canning. The semi-round straight stringless pods are 6 to 7 inches long, very broad and of good thickness. The vine is hardy and very productive.

½ lb. 20c lb. 40c 5 lbs. $1.65 10 lbs. $3.00

Pencil Pod Black Wax—64 Days. Color of seed, black, long cylindrical. Height of vine, 16 to 18 inches. Pods, round, 6 to 7 inches long, absolutely stringless and very meaty. Fiberless and of the finest quality. This bean is without doubt the best round podded wax bean in the market and no one should be without it in his garden. The pods are very handsome, long, of a bright yellow color and extremely tender. We cannot recommend this variety too highly as a round podded wax Bean.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Round Podd ed Kidney Wax or Brittle Wax—56 Days. Color of bean, white with black eye. Pods, round, slightly curved, very handsome appearance, extremely brittle, 5 to 6 inches long, containing 6 or 7 beans, light yellow, absolutely stringless and very meaty and fiberless. A great favorite in certain sections of Pennsylvania. Strong growing vine with broad large rough leaves. Quality of the best. However, we do not consider it as good a bean as our strain of Pencil Pod Black Wax. Usually a shy producer of seed, but a very attractive pod.

½ lb. 20c lb. 40c 5 lbs. $1.65 10 lbs. $3.00

Sure Crop or Bountiful Wax—58 Days. Color of seed purplish black, resembling Curries Rustproof. Height of vine, 16 to 18 inches. Pods about 6 inches long, containing 6 or 7 beans. Pods golden yellow, flat, not as wide as Golden Wax but longer and absolutely stringless, with little fiber. We believe this bean should take the place of Curries Rustproof because it is stringless, which makes it a superior variety although it is about 6 days later, which is its only drawback, but in all other ways much superior to Curries.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Unrivalled Wax—60 Days. Color of seed resembles Bountiful only much smaller. Pods semi-round, stringless when young, deep yellow, narrow, brittle. Longer and lighter in color than Golden Wax. 5 inches long. As carry as Golden Wax.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Vines of Landreths' Top Notch Golden Wax Beans

ALL-AMERICA VEGETABLE SEED TRIALS

The D. Landreth Seed Company has again been signally honored with the award as one of those conducting the All-America Vegetable Seed Trials. Mr. Hal Mills of our staff will again be in charge of judging the merits of various new strains from America and abroad which have not as yet been offered for sale but will undoubtedly represent the best types of the future. Visitors are welcome at Bloomsdale Farms, Bristol, Pa.
BUSH BEANS—Wax or Golden Podded Continued

**Wardwells Kidney Wax—66 Days.** Color of seed, white with purplish eyes and kidney shaped. Pods, brittle and of fine texture, about 6 inches long, flat, meaty, absolutely stringless, almost straight, containing 5 or 6 beans in the average pod. Color of pods, golden yellow and very handsome. We believe this to be the best flat pod, Wax Bean in the market, and it cannot be recommended too highly. A very shy seed producer.

$\frac{1}{2}$ lb. 20c lb. 30c 5 lbs. $1.25$ 10 lbs. $2.30$

**Weber Wax or Crackerjack—48 Days.** Height of vine, 14 to 15 inches. Pods average about 6 inches long, containing 5 or 6 beans. Very much resembles Curries Rustproof. Absolutely stringless when young. Pods, flat, long, but not as broad as Curries. Seed, yellow with white eye, kidney shaped. Vines, very hardy. A very early, very productive good wax bean, highly recommended to Market Gardeners.

$\frac{1}{2}$ lb. 20c lb. 30c 5 lbs. $1.25$ 10 lbs. $2.30$

**POLE or RUNNING BEANS—NOT LIMAS**

12 Qts. to Acre; 3 Lbs. to 100 Poles. Set Poles 4 x 3 Feet. Seed breaks ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse

**Creaseback White or Cornfield—70 Days.** Color of seed, white. Shape, long and narrow. Pods, 3½ to 6 inches long, containing 8 or 9 beans, which are borne in clusters of 8 to 9 pods. Early producers, round, meaty, stringless pods when young. Extremely productive.

$\frac{1}{2}$ lb. 15c lb. 25c 5 lbs. $1.05$ 10 lbs. $1.95$

**Golden Cluster Wax—75 Days.** This is one of the best early Wax Pole Pod Beans on the market. Foliage strong, vigorous, with large light yellowish green crumpled leaves. Pods green when young, turning to golden as they mature, stringy, flat, broad, golden, meaty, 6 to 8 inches long, borne in clusters, 6 or 7 flattish dull white beans in a pod, fine as a Shell Bean.

$\frac{1}{2}$ lb. 20c lb. 30c 5 lbs. $1.25$ 10 lbs. $2.30$

**Horticultural Pole, London or Speckled Cranberry—72 Days.** Sold years ago by this House under the name of Wren's Egg. Color of bean, flesh colored splashed or spotted with red. Dry seed almost round. Pods after they pass marketable condition show a brilliant carmine and are very attractive. Pods, 5½ to 6 inches long, 6 or 7 beans, slightly curved, flat to oval, stringy. Also used as a shell bean.

$\frac{1}{2}$ lb. 15c lb. 25c 5 lbs. $1.05$ 10 lbs. $1.95$

**Kentucky Wonder Green Pod or Old Homestead—68 Days.** Sometimes called Egg Harbor, a name given by us over 40 years to mislead the Jefferson Co., N. Y., bean growers, when we first introduced this variety so as to disguise its identity. Dried seeds, large, flattish, and oval, incurved at eye. Color generally gray, but marked with many black irregular stripes. The Department of Agriculture Bulletin 100 states that the “Tennessee Wonder is the largest and handsomest of all cultivated beans.” The pods are 8 to 9 inches long, round light green, tinged with purple. Curved, round to double barrelled in shape. Stringless when fit for table use. Wrinkled and depressed between each of the 8 or 9 seeds in the pod.

$\frac{1}{2}$ lb. 20c lb. 30c 5 lbs. $1.25$ 10 lbs. $2.30$

**Lazy Wife—74 Days.** Seed attractive, glossy white, round. Pods green, borne in clusters, flat and broad, 5½ inches long, containing 6 or 7 beans in a pod. Small foliage, a good, late, productive, stringless pole bean.

$\frac{1}{2}$ lb. 15c lb. 25c 5 lbs. $1.05$ 10 lbs. $1.95$

LANDBRETH'S TENNESSEE WONDER—69 Days

Sometimes called Egg Harbor, a name given by us over 40 years to mislead the Jefferson Co., N. Y., bean growers, when we first introduced this variety so as to disguise its identity. Dried seeds, large, flattish, and oval, incurved at eye. Color generally gray, but marked with many black irregular stripes. The Department of Agriculture Bulletin 100 states that the “Tennessee Wonder is the largest and handsomest of all cultivated beans.” The pods are 8 to 9 inches long, round light green, tinged with purple. Curved, round to double barrelled in shape. Stringless when fit for table use. Wrinkled and depressed between each of the 8 or 9 seeds in the pod.

$\frac{1}{2}$ lb. 20c lb. 30c 5 lbs. $1.25$ 10 lbs. $2.30$
POLE or RUNNING BEANS (Not Limas)  
—Continued

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

McCaslan Pole—67 Days. A prolific, early maturing, green podded, pole variety, of excellent quality. Pods are rather flat and slightly curved, 7 to 8 inches long, thick, dark green, meaty and quite stringless. The shell Beans are a flattish pure white.

1/2 lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Nancy Davis, Striped Creaseback or Scotia—73 Days. Seed Kidney shaped, mottled putty color with dark stripes. Blossoms bright crimson with silver gray hood. Pods green, round, full, creaseback, slightly curved, dashed with purple as the pods mature, 5 to 5 1/2 inches long, containing 8 or 9 beans. A good semi-stringless variety. The best variety for planting to Corn. A good climber and productive.

1/2 lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

POLE LIMAS

THE FLAVOR OF ALL THE POLE LIMAS IS SUPERIOR TO BUSH LIMAS. Probably Originally a Native of Peru or Brazil. Two Pounds Will Plant 100 Yards; Thirty Pounds Will Plant an Acre. Seed breaks ground in 7 days. One inch high in 9 days under most favorable circumstances in greenhouse

Landreths' Large Green Seeded Lima

Carolina or Sewee—80 Days. Named after the river in South Carolina. A small early variety of Lima, much more used in the South than elsewhere, as a Butter Bean, more vigorous in growth and more prolific than the ordinary Jersey Limas. Very small foliage, short pointed leaves, more metallic green than the ordinary Lima. Pods, about 3 inches long, borne in clusters, averaging 3 or 4 small white beans. Similar to Dwarf Sewee, Henderson's Bush or Baby Lima.

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Challenger, Dreer's, or Fordhook Pole—89 Days. Beans very full or plump, larger foliage than Jersey Lima, pods not so long as the King of the Garden by 1/2 inches, but as broad; not so early as the King of the Garden, the original parent of the Fordhook Bush Lima, very meaty and good flavor. Potato Lima type. Pods about 4 inches long, containing about 3 or 4 beans which are similar but not as plump as the Fordhook Bush Lima.

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

King of the Garden—84 Days. One of the best and most productive Pole Limas, large leaved, good climber. Vine of a branching habit, pods about 4 1/2 to 5 1/2 inches long, dark, large and containing about 3 or 4 beans to the pod. Seed flat, and white with a slight green tinge.

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

LANDRETHS' LARGE GREEN SEEDED—84 Days. Seed of a decided green tinge, that is, not bleached ivory-white. This green seeded selection is never been excelled. The best form of Jersey Limas on the market today for both private and market gardeners, unsurpassed in flavor, of superior quality, averaging 4 or 5 beans to the pod, which is 4 1/2 to 5 1/2 inches long.

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Large Early Jersey—84 Days. One of the old standbys of the Lima type. Pods average 4 to 4 1/2 inches long. Contain 3 beans each. Seed identical to the King of the Garden.

1/2 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

VITALITY TESTS

Every season in our Greenhouses we make about fifty thousand tests in earth of the Germination and Vitality of the Seeds used in filling orders. Tests are made of each lot of Seed received at the Warehouse, no matter from what source, and repeated again three months later. All these tests are entered in a separate vitality book, which is consulted before the Seeds are shipped.
LANDRETHS' SEEDS MAKE A GOOD FARMER BETTER

DWARF or BUSH LIMA BEANS

Two weeks earlier than Pole Limas. Average height of vine, 14 to 20 inches. Two pounds will plant 100 yards of row or 40 to 60 pounds to an acre. No one should be without one of the following varieties of Dwarf Limas in his garden. We cannot recommend them too highly. They are two weeks earlier than the Pole Limas and much easier to raise, as no poles or strings are required. Their flavor, however, is not as appetizing as the old-fashioned Pole Lima. Plant in drills 30 to 36 inches apart, dropping the beans 4 to 5 inches apart. If too thick, they will not do well. Do not plant in cold ground as they are liable to rot. If possible plant Lima Beans with eyes down. Deeply rooted plants continue to grow after others stop.

Fordhook Bush Lima

Burpee's Bush Lima—77 Days. Seed more nearly resembling the old Jersey Pole Lima than any other, but a trifle smaller. Flat, usually having the appearance of a cut on both sides of the eye. This is a lima bean borne in full-sized pods on plants of a dwarf habit. The pods average 4 to 5 inches long and contain an average of 2 or 3 beans, although some pods contain 4 beans—maturing for the table about 10 days earlier than the earliest Pole Lima. Vines not averaging over 20 inches high. Not so tasty as the Pole Lima.

Henderson's Dwarf Lima; Dwarf Sewee or Dwarf Carolina—72 Days. Seed small, flat, white with a tinge of yellow. Height of vine, about 14 inches, compact. Leaves, small and pointed, more of a metallic dark green than any other Bush Lima, a dwarf form of the Carolina or Pole Sewee from which it was originated. Early and very productive. Pods average 2½ to 3 inches in length and contain 3 or 4 small beans. They are of fine quality for so early a bean. Sold years ago by us as Dwarf Carolina. Very popular with Commercial Canners who put up millions of cans of them for winter use. Commercially known as Baby Lima. Used extensively as a dry shell bean.

BEETS

Native of Europe, North Africa and Western Asia. Ready for Table Use 45 to 60 Days After Sprouts Appear Above Ground. Three Ounces of Seed Will Sow 100 Yards of Row; Twelve Pounds per Acre.

Beets are a great acquisition to the family garden, but should be pulled young, before they age. They should be sown early in the Spring, as soon as the ground is tillable for a summer garden, and in July or August for the Winter garden, to enable them to get sufficiently large to be in first-class condition to pit for Winter use. Beets if sown too early in the season grow too tough to be carried over the Winter. The time of sowing and the condition of the ground make the inside color darker or lighter. Autumn sown beets are usually much darker in color than Spring sown.

Crimson Globe—65 Days. A very popular beet on account of its excellent color and shape. Deep globular in shape with little crown and a clean cut, small tap root. Skin and flesh of a dark red color with zones.

Pkt. 6c oz. 15c ¼ lb. 30c lb. 90c

Pkt. 5c oz. 15c ¼ lb. 30c lb. 90c

Detroit Dark Red Perfected Strain—65 Days. Of great celebrity, because of its merit. Form oval, flesh dark blood with indistinct zones of slightly lighter color. Skin smooth with small tap roots. A favorite beet with all private and market gardeners. Very extensively used by canners because of its good dark red color. By all odds the most popular table variety today.

Pkt. 5c oz. 15c ¼ lb. 40c lb. $1.25

Early Wonder or Boston Crosby Strain—65 Days. This is one of the earliest of the small table beets for outside culture. It has small leaves, is flat to globe in shape. Bright red skin. Vermillion red flesh with distinct zones of a lighter red. It is of excellent quality, being sweet, tender and free from fibrous roots. It is a Select Improved Crosby.

Pkt. 6c oz. 15c ¼ lb. 30c lb. 90c

Eclipse Extra Early—65 Days. Bulbs globed, early as name indicates, small tops. Roots smooth, round, inclined to be top shaped. Leaves light green, broad with broad orange midrib. An excellent beet for the family garden.

Pkt. 6c oz. 15c ¼ lb. 30c lb. 90c

Egyptian Extra Early—48 Days. The roots of this Beet develop quicker than any other Table Beet. Bulbs half globular or flat. Roots very smooth and dark red. Small tops. Flesh of a purplish red.

Pkt. 6c oz. 15c ¼ lb. 30c lb. 90c

Half Long Blood, Bastian Half Long or Phila. Perfection—70 Days. Fine color outside. Excellent color when cut. Tops purple and green in about equal proportion. Very desirable for a late beet and one of the best producing. A handsome, tapering, wedge-shaped root, growing well under the ground. Season much earlier in maturity than other long beets.

Pkt. 6c oz. 15c ¼ lb. 30c lb. 90c

LANDRETHS’ BEST—60 Days. About 5 days earlier than Detroit, more ball-shaped, and altogether a superior sort. Slimmer tap roots and more mouse-tailed. Roots vary from deep globe to round. Flesh deep red, with indistinct zoning, of excellent sugary quality. Skin smooth and free from fibers. All gardeners will find this beet of fully double the usual value if they are pulled and served on the table when so small as to be no larger than a silver half dollar. Landreths’ Best is very choice for early use, having an intensely red color and delicate texture and flavor.

Pkt. 6c oz. 15c ¼ lb. 40c lb. $1.30
THE PRICE OF BEET SEED IS IMMATERIAL—GOOD SEED IS ESSENTIAL—BEETS—Continued

**LANDRETHS’ EARLY BLOOD RED TURNIP—55 Days.** In this particular beet you have one of the old standbys. Very hard to equal. Top-shaped, early in maturity and one of our best sellers. Very desirable in every respect. Skin deep red and very smooth. When cut it proves itself to be one of the best red Turnip Beets on the market.

Pkt. 5c oz. 15c 1/4 lb. 30c lb. 85c

**Long Blood Red—80 Days.** Resists drought better than any other variety of Beet. Color, deep red; flesh, very sweet; roots long, slim with a big shoulder, one third out of the ground.

Pkt. 5c oz. 15c 1/4 lb. 30c lb. 85c

**Ohio Canner—55 Days.** In shape more like Crosby Egyptian than Detroit. Inside very excellent dark color and practically free from light zones. A splendid new variety likely to supersede other strains.

Pkt. 5c oz. 15c 1/4 lb. 35c lb. $1.15

**New Century, Lutz Green Leaf or Long Season**

Tops small, glossy green with pink midribs; roots dark purplish red, half long top shape; flesh blood red with indistinct zone. Is a late variety for home use.

Pkt. 5c oz. 15c 1/4 lb. 40c lb. $1.30

**SUGAR BEETS**

**Giant Feeding Half Rose Sugar—90 Days.** This beet is extremely desirable for cattle—of high nutritive value. The flesh is white, and very sugary.

Pkt. 5c oz. 10c 1/4 lb. 20c lb. 60c

**Klein-Wanzleben—90 Days.** Beet sugar manufacturers have united in recommending this as possessing the highest sugar producing qualities, as much as 18 tons of sugar having been made from 100 tons of root of this variety. We highly recommend it also for feeding.

Pkt. 5c oz. 10c 1/4 lb. 20c lb. 60c

**Lucullus Swiss Chard**

Lucullus—60 Days. Stalks pure white and thick as Rhubarb. Foliage yellowish green and crumpled like Bloomsdale Spinach or Savoy Cabbage. Very choice. Growing in popularity every day. The tops look like Spinach and the stems like Celery.

Pkt. 5c oz. 15c 1/4 lb. 30c lb. 85c

**MANGEL WURZELS FOR CATTLE**

**Golden Tankard—100 Days.** A rapidly maturing root adapted to shallow lands, although doing well on every soil. The root has broad shoulders partly above ground, rich golden skin, solid sugary flesh and golden footstalk. The flesh is yellow zoned with white.

Pkt. 5c oz. 10c 1/4 lb. 20c lb. 60c

**Mammoth Long Red—110 Days.** In England, 80 tons have been grown to the acre. Everywhere the most popular variety for cattle feeding. Roots grow half above ground, very large, long, well formed, usually straight, flesh-white tinged with rose. We cannot recommend this beet too highly to dairymen.

Pkt. 5c oz. 10c 1/4 lb. 20c lb. 60c

**CABBAGE**

Native of the Western European Coast. Gardeners Can Rely Upon Landreths’ Cabbage Seed. One Ounce Will Produce 1000 Plants. Seed breaks ground in 5 days. One inch high in 8 days under most favorable circumstances in greenhouse. Deep rooting will resist drought, so in setting out cover to the first leaf-stems. Supply plenty of moisture and manure. We suggest that you do not sow seed for an entire crop at one time, as plants of various ages are differently affected by circumstances, and by separate seed plantings you have a better chance to profit from at least a portion of your crop.

Wisconsin Yellows-Resistant Cabbage varieties were introduced by the Wisconsin Agricultural Experimental Station to combat the tremendous crop failures at the beginning of this century, and have proven to meet their requirements to prevent the disease commonly known as “Yellows,” or sometimes called “Wilt.” These strains have been successful in combating this disease.
CABBAGE—Continued

Wisconsin All Seasons—94 Days. A yellow-resistant strain of All Seasons. Valuable in sections which are infested with cabbage yellows or wilt. Coarser plants than the original All Seasons. A good Winter keeper, producing large, flat, deep hard heads. Productive; used extensively in the manufacture of Kraut, as well as for home gardens.

Pkt. 5c oz. $1.05 lb. $3.50
Wisconsin Hollander No. 8—125 Days. A late, yellows-resistant Danish Ball Head, developed by Prof. L. R. Jones, producing larger plants than the famous Danish Ball Head. Heads are inclined to flatten slightly as they mature.

Pkt. 5c oz. 40c ½ lb. $1.05 lb. $3.50

BLOOMSDALE EARLY DWARF FLAT DUTCH—100 Days. A large intermediate variety. A good keeper of the finest quality. Heads round to flat, solid, leaves rather short; head will stand without bursting. Has such qualities as the market gardener can duly appreciate.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Marion Market or New Resistant Wisconsin Copenhagen—90 Days. This is a yellows-resistant strain of Copenhagen Market. Plants large, coarse, not so uniform or early by ten days as the original Copenhagen, but have solid, crisp, tender, round heads. Will produce a crop when non-resistant strains fail.

Pkt. 5c oz. 55c ½ lb. $1.85 lb. $6.20

Charleston Large Wakefield, Landreths' Very Select—80 Days. Specially selected. Very choice and uniform, best of any from any source. One-third stronger grower than the Jersey Wakefield. One of the best early shipping sorts, larger but not so early as the Landreths' Selected Jersey Wakefield. Super-excellent.

Pkt. 5c oz. 30c ½ lb. 90c lb. $3.00

Charleston or Large Wakefield—80 Days. A large, flattish variation of the pointed early Jersey Wakefield. Heads are half round, later than the Jersey Wakefield by about 10 days and 40 to 50% larger. This variety is also extremely popular with market gardeners, owing to its earliness and its size.

Pkt. 5c oz. 25c ½ lb. 70c lb. $2.25

Copenhagen Market—80 Days. The plants are very vigorous, short, stout stems, few outer leaves, producing a very hard, round head, very uniform in size and of long keeping qualities. In maturity slightly larger and later than Golden Acre. Produces a greater tonnage per acre and is very profitable. It is gaining in popularity every year, as it is an excellent variety.

Pkt. 5c oz. 25c ½ lb. 70c lb. $2.25

CHINESE OR CELERY CABBAGE

There are numerous varieties of this cabbage on the market but we believe these are the best of them all. They resemble Cos Lettuce more than any cabbage.

Chihili—55 Days. We think this is superior to the other Chinese Cabbage. Heads 18 to 20 inches tall and 3½ to 4 inches thick. Very firm and well blanched, crisp, tender and sweet.

Pkt. 5c oz. 25c ½ lb. 70c lb. $2.25

Pe-Tsai—70 Days. The leaves are very much crumpled, light green, somewhat resembling smooth Mustard, but with broad ribs. When tied or bunched with raffia, the inner leaves bleach to a creamy white. It is distinct from any American or European cabbage.

Pkt. 5c oz. 20c ½ lb. 55c lb. $1.75

Wong Bok—70 Days. A desirable, short, broad, tightly folded head, shorter and thicker than Pe-Tsai, which is 8 to 10 inches tall. Bleaches very well.

Pkt. 5c oz. 20c ½ lb. 55c lb. $1.75

Early Flat Dutch—90 Days. This variety produces thick leaves, very dark blue in color. Succeeds admirably in Southern States on account of its ability to resist heat. It is found especially valuable to sow in cold frames in October and November and to plant out in the Spring as a succession to the smaller earlier pointed varieties.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Early Jersey Wakefield, Landreths' Very Select—70 Days. Specially selected, extra early, choice in all good qualities, earlier than Long Island Wakefield. Recommended to gardeners. Heads ovoid, broad at the base and running to a blunt point. Very solid, early. This excellent variety is the surest heading of the very early varieties and most depended upon by the market gardener of the Southern States for heads to send North in the early Spring. A very superior selection.

Pkt. 5c oz. 25c ½ lb. 70c lb. $2.25

Early Jersey Wakefield—70 Days. A short stemmed, hardy, early cone-shaped heading variety, broad at the bottom with a pointed peak, the leaves leathery and well folded over the top.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00
GROW FRESH VEGETABLES AND SAVE MONEY

CABBAGE—Continued

BLOOMSDALE LARGE LATE FLAT DUTCH—
120 Days. The original strain of this cabbage was obtained by us from Swedish gardeners who settled in Philadelphia, previous to the Revolutionary War. Ever since that time we have been continually re-selecting this Cabbage and we now believe it is second to none of this type. It is late, produces large solid weighty and very uniform heads and is the best cropper obtainable for tropical or semi-tropical climates.

Pkt. 5c oz. 25c $1 lb. 75c lb. $2.25

BLOOMSDALE LARGE LATE DRUMHEAD—
120 Days. A large heavy head, smooth-leaved, late ripening Cabbage. No strain is superior and few equal to this. Head is thick, broad, solid, flat. Leaves extend well over the center leaves of the head and fold down alternately, forming a tight, compact head. The natural habit of the seedling plant is to develop short thick stocky stems but this quality is affected by the system of growth, for if the seedlings are crowded in the bed or grown among weeds, or under the shade of a house, fence or tree, they reach upward for air and light, resulting in long, slim stalks. The bad form of the plants cannot be corrected by any subsequent culture. We cannot too highly recommend this strain of Large Late Drumhead, but be careful to plant it in a suitable location.

Pkt. 5c oz. 25c $1 lb. 75c lb. $2.25

Danish Round Short Stem, Amagar or Holland—116 Days. This variety is considered by many the most popular ballhead, having a shorter stem, and is a little earlier than the ball stem; much superior. It produces a very solid, good quality, medium size round head and is very popular with the market gardeners in Cabbage growing districts of northern latitudes. The best late Cabbage. Fine for kraut; hard to equal.

Pkt. 5c oz. 25c $1 lb. 75c lb. $2.50

Penn State Danish Ball Head—120 Days. A late variety developed by Prof. C. E. Myers, of Pennsylvania State College. Productive, late, uniform, attractive, hard heads, six to seven inches deep, an excellent, large yielding Winter variety, resembling Danish Ball Head but heads slightly more flattened.

Pkt. 5c oz. 35c $1 lb. 70c lb. $3.75

Landreths' Very Select Early Jersey Wakefield
(For description see Page 17)

Glory of Enkhuizen—90 Days. A rather small but very hard heading sort set in a cluster of long, spreading leaves. Large, round and solid. Outer leaves medium size. Is a hardy grower and a sure header. Many market gardeners prefer this sort to all others on account of its excellent quality and its sure cropping habit.

Pkt. 5c oz. 20c $1 lb. 60c lb. $2.00

Golden Acre—65 Days. Here we have an acquisition, for seed of this variety planted at the same time will mature 5 days earlier than Early Jersey Wakefield, besides being larger and much more showy. Plant dwarf, compact. Few outer leaves. Heads very solid; earlier but smaller than Copenhagen. By actual count 96 of 100 plants produced fine heads, each of which ripened at one time; an almost, unbelievable condition. It is conical in shape, short stem and almost rests on the ground.

Pkt. 5c oz. 30c $1 lb. 85c lb. $2.75

Stein's Early Flat Dutch—90 Days. Growing constantly in demand by the early planters of Cabbage in Texas and the South for the northern market in the Spring. This variety produces early, large, flat, solid heads. A very vigorous plant with a short stem. The true stock of seed is hard to obtain, and greatly sought. We offer an unusually excellent strain.

Pkt. 5c oz. 20c $1 lb. 60c lb. $2.00

Succession or Florida Header—106 Days. An intermediate between Early Flat Dutch and Late Flat Dutch. Slightly later than the second early sorts. Plants are vigorous with short stems; heads are large, deep and excellent quality.

Pkt. 5c oz. 20c $1 lb. 60c lb. $2.00

Winnigstadt—100 Days. One of the old hardy standbys, producing a medium size, long pointed or cone shaped very solid head which is closely wrapped with dark, slate colored leaves. A favorite with old gardeners as it is one of the very intermediate early sorts.

Pkt. 5c oz. 20c $1 lb. 60c lb. $2.00

Later Varieties or Winter Sorts

Danish Round Short Stem
CABBAGE—Continued

Drumhead Savoy—100 Days. The best of its class and is as palatable as a Cauliflower. One of the best Cabbages one can grow. Large size, deep green, flat heads, curly or crinkled leaves. Stalk short, habit compact.

Pkt. 5c oz. 25c ½ lb. 76c lb. $2.50

Premium Large Late Flat Dutch—120 Days. A heavy, hard, smooth leaved, late ripening Cabbage. The head is thick, broad, solid, and slightly rounded on the top, though this variety is what is termed a flat head, as it tends toward flatness. The leaves extend well over the center line of the head and fold down alternately, forming a tight, compact head.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Red Dutch or Red Rock—100 Days. Leaves red or purple. Head medium size, round, solid, deep red color. Medium length stems, generally used for pickling.

Pkt. 5c oz. 25c ½ lb. 76c lb. $2.50

Surehead—115 Days. This is a popular strain of the Large Late Flat Dutch type of Cabbage so largely grown for Winter. The heads are large, round, flat at the top, remarkably uniform, extra hard, firm, and of fine texture. An excellent variety and stands shipping well.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Drumhead Savoy Cabbage

Volga or Stonehead—110 Days. A most reliable late sort, a superior header, never disappointing, with broad, flat, hard, large, solid heads of excellent keeping quality. Quite distinct in color from other Cabbages, it being a silvery green, with smooth folded leaves, the color of a silver coin. Plant vigorous and unusually short stalked.

Pkt. 5c oz. 25c ½ lb. 76c lb. $2.50

CARROTS

Native of Europe. Three Ounces of Seed Will Sow 100 Yards of Row; 4 lbs. for an Acre. For domestic use sow when the Apple is in bloom or as soon as the ground is workable. Drill in rows of fifteen inches for hand culture, two and a half feet for field culture, and when two inches high thin to two to three inches apart. Carrots for the table should be used when half grown because they are more tender.

Chantenay Half-Long Scarlet or Model—70 Days. Roots about 5 to 6 inches in length, 2 to 2½ inches thick at the crown. Small top set in a slight depression. Color deep orange red. Smooth tapering. A fine medium early, half long, stump rooted Carrot. One of the best for Market Gardens or Private use. Pkt. 5c oz. 16c ½ lb. 30c lb. $1.00

Chantenay Red Cored or Coreless Half-Long—70 Days. An improvement on the Chantenay. It is the most desirable variety, its core being indistinct. Roots 5 to 6 inches long, 2½ inches in thickness at shoulder, flesh reddish orange, tender, delicate flavor. Same size and shape as Chantenay.

Pkt. 5c oz. 16c ½ lb. 40c lb. $1.25

Early Scarlet Horn Blunt-Rooted or Dutch Horn—60 Days. A very popular early sort. Roots a trifle less than 3 inches long, 1½ inches at the shoulder and almost that wide at the base where it is decidedly stump rooted. Color bright orange scarlet.

Pkt. 5c oz. 15c ½ lb. 30c lb. $1.00

Imperator—76 Days. A new introduction of great merit. Tops medium size, but large enough for bunching. Length of root 7 to 8 inches. Indistinct core. Diameter of shoulder 2 inches. Rich orange flesh, fine for the market gardener, as its narrow or sloping shoulder tapering half blunt end, makes it especially fine for bunching.

Pkt. 5c oz. 15c ½ lb. 40c lb. $1.25

Orange Danvers
CARROT—Continued

Long Orange—80 Days. This extremely productive carrot frequently grows 10 to 12 inches long, sometimes longer, and produces a root of deep orange color, of about 3 inches diameter at the top of crown, tapering to a slight point. This is a variety used for both table and stock feeding.

Pkt. 5c oz. 15c 1/2 lb. 30c lb. $1.00

Orange Danvers Half Long or Rubicon—76 Days. This is probably the best known variety of Carrot, as for years Market Gardeners have used more seed of this variety than all others combined. It is a broad shouldered cylindrical variety, 7 inches long, 2 1/2 inches at the crown and gradually tapers to a blunt type. Color bright orange. Has a rather large core but is very tender and of excellent quality.

Pkt. 5c oz. 15c 1/2 lb. 30c lb. $1.00

Ox-Heart or Guerande—70 Days. A thick blunt variety, 3 to 4 inches long and 2 inches in diameter. When full size grows to a diameter of a pint measure but should be eaten when one inch in diameter. Bright orange. An excellent variety.

Pkt. 5c oz. 15c 1/2 lb. 30c lb. $1.00

CATTLE CARROTS

Large White Belgian—100 Days. This is one of the very best cattle feeding carrots. Roots half-long, 8 to 10 inches in length. Smooth with a heavy shoulder. Color of flesh a creamy white, with a light green crown. Very productive, and easy to harvest.

Pkt. 5c oz. 16c 1/2 lb. 30c lb. 86c

Large Yellow Belgian—100 Days. Very similar to the White Belgian in form and productiveness, only more slender. More attractive, owing to its yellow color and green crown. Used mostly for cattle feeding, producing an excellent quality of milk.

Pkt. 5c oz. 15c 1/2 lb. 30c lb. 85c

CAULIFLOWER

One-Half Ounce of Seed Will Sow 100 Yards of Row. Moisture or High Altitude Tends Toward Success. The earliest varieties are most likely to succeed in the hands of inexperienced growers. Sow the early sorts in seed beds at the beginning of Autumn, keep them in a cold frame protected by sash from the severe frost of the Winter, and transplant into deep and very rich ground as soon as frost ceases. Hand glasses or boxes placed over them at night when they are put out are useful. It should be observed, however, that success is very uncertain in dry localities. There is little difficulty in having fine Cauliflowers anywhere when planted in frames under glass, at close of Winter, so as to advance them ahead of the early Summer heat. The late varieties mature in Autumn, and are sown at the same time and managed similarly to Cabbage. They do best in localities where the atmosphere is damp and saline, as on the Atlantic or Pacific coast or in regions of high altitude as the Catskill Mountains in New York State, where they are grown to perfection. We may add that Cauliflower can only be grown on rich, well-tilled, well-watered soil, and that it can hardly be overfed. Our seed is of the highest quality.

Early Select Snowball Cauliflower
CAULIFLOWER—Continued

Early Snowball, Select Strain—95 Days. An extra early sort. Early as any under whatever name. Plants short and stocky, erect, pointed leaves and producing round heads, pure white; extremely early and perfectly solid. Edible heads 90 to 100 days from planting. Autumn crops are earlier than Spring crops. A variety of widest celebrity, by reason of its reliable qualities of productiveness, color, flavor, and keeping qualities. Leaves long and narrow. No strain superior to that which Landreth offers. The most popular variety in use.

Pkt. 20c oz. $1.75 lb. $6.00

Early Snowball—96 Days. A fine but not an extra select strain of this well-known Cauliflower, producing excellent heads.

Pkt. 15c oz. $1.25 lb. $4.50

Algiers—110 Days. An early, hardy and admirable sort used extensively before Snowball was introduced. A certain header.

Pkt. 10c oz. 95c lb. $3.00

Half Early Paris—90 Days. A small, hardy sort, very vigorous in growth. Produces a crop while many other sorts fail. Leaves large, small stem and a small but very white head. It is a very popular variety on account of being an almost sure cropper even under unfavorable conditions.

Pkt. 10c oz. 95c lb. $3.25

Lenormands—120 Days. A large, late variety, with well-formed, white, handsome heads. Strong grower.

Pkt. 10c oz. 95c lb. $3.00

Veitch’s Autumn Giant—130 Days. Very vigorous, long-stalked, large, dense foliage, stiff heads, long standing; should be sown early.

Pkt. 10c oz. 45c lb. $1.50

CELERY

Two ounces of Seed will plant 100 Yards of Row. Maturing in 130 to 150 Days According to Season. Sow thinly just before the Apple tree is in bloom on a finely raked, well-pulverized piece of ground, in a moist place or convenient to water, which should be applied freely during dry weather. The seed should not be covered more than a tenth of an inch. It is quite customary after planting celery to cover the ground with a slight sprinkling of straw or salt hay to retain the moisture. As soon as the seed is sprouted, take the hay or other covering off. Celery seed will not germinate in dry soil; therefore, it is very essential to plant it very early in the Spring.

Celery is one of the best of our Winter vegetables. To get a good crop, plants must be removed from seed beds and planted in rows about 4 feet apart, plants set about 4 to 5 inches apart so that the plants when fully developed can be easily worked. The whole planting should be so arranged that there is space between the rows to obtain earth for earthing to bleach the stalks in Autumn. Celery Seeds are often used for flavoring soups.

Easy Blanching or Sanford Superb—130 Days. Vigorous, plants medium size, stalks slightly taller than Golden Self-Blanching, white, crisp, thick, brittle, tender stalks, blanches easily, of an aromatic or nutty flavor, foliage very crumpled. About two weeks later than Golden Self-Blanching.

Pkt. 5c oz. 35c lb. $1.15 lb. $3.75

Emperor or Fordhook—130 Days. A Dwarf variety of superior excellence, very showy dark green foliage with a golden heart, to be at once noted because of its particularly upright growth of unusually thick, stocky stalks, very solid and large, no suckers, sixteen inches high.

Pkt. 5c oz. 35c lb. $1.15 lb. $3.75

Florida Golden—118 Days. It is an intermediate type; an improvement over Golden Plume. Withstands cold. Ribs round, thick and long. Large full golden hearts. Heavy yielder. The plants grow from 23 to 25 inches high, assuring an attractive pack.

Pkt. 10c oz. $1.10 lb. $3.60 lb. $12.00

Giant Pascal or Large White—140 Days. A mammoth, silver-white stalked variety of French origin, one of the best, if not the best, large green celeries still on the market. It is very productive, consequently, very profitable. We consider it the best celery for Winter use. It is very easy to bleach and when done presents a yellowish, white color, very solid and crisp, might be considered to resemble a nut in flavor.

Pkt. 5c oz. 25c lb. 75c lb. $2.50

Pkt. 10c oz. $1.40 lb. $5.00 lb. $18.00
CELERY Continued

Golden Plume or Wonderful—116 Days. We hesitate to recommend something to take the place of Golden Self-Blanching, but here we offer something superior. This variety is an individual line selection from Golden Self-Blanching, is five to ten days earlier, produces a larger, thicker and more solid stalk, blanches much more easily, is of richer color, being creamy yellow and lastly, it withstands blight much better. We look for it to finally replace the old standby, for undoubtedly it is a wonderful improvement. No strain, no matter what the selling price may be, is superior to that which we offer.

Pkt. 5c oz. 50c $1.65 lb. $6.50
Golden Self Blanching ('Tall)—120 Days. By many believed to equal the famous French grown of this variety. It is a big hearted, showy type. The plants develop crisp, tender stalks of rich golden yellow color. It requires little blanching. 26 to 30 inches tall. Pkt. 5c oz. 40c ½ lb. $1.35 lb. $4.50

Paris Golden Yellow French Grown Seed ('Tall)—120 Days. A solid, golden variety, very showy and rich. Very easily blanched, consequently, the easiest to develop into edible condition. Thick, solid and crisp, of a waxy golden appearance.

Pkt. 5c oz. 96c ½ lb. $3.00 lb. $10.00

Utah or Golden Crisp—132 Days. A week or ten days earlier to mature than Giant Pascal. Plants compact, solid, thick, with a nutty flavor.

Pkt. 6c oz. 75c ¼ lb. $2.25 lb. $7.75

White Plume—116 Days. This is a most desirable, early, handsome Celery. One of the best varieties of Celery in the market, is especially fine for private gardens. No garden should be without this most delicate and delicious variety; it is much in demand by market gardeners for early Fall use. It is self-blanching to a great extent—consequently after earthing it blanches very quickly and is soon ready for the table; is very tender, sweet, and attractive in appearance. When growing it presents handsome leaves of bright green with white tips. We cannot recommend our strain of this variety too highly.

Pkt. 6c oz. 25c ¼ lb. 75c lb. $2.50

TURNIP ROOTED OR CELERIAC

Large Smooth Prague—120 Days. This plant is used for the large Turnip-like bulbs forming under the ground; the stems above ground are of no value except to use for flavoring. The seed should be sown and given the same treatment as any ordinary Celery, except it is not necessary to earth up the plants as is necessary in growing ordinary Celery. The roots can be readily kept till late in the Winter and are excellent for soups, stews or salads.

Pkt. 5c oz. 25c ½ lb. $75 lb. $2.50

SUGAR or SWEET CORN

First Introduced in 1830—Then One Variety. One lb. of seed for 100 yds. Twelve lbs. to the acre. Seventy-two to 100 days from planting to edible condition. Breaks ground in 6 days. One inch high in 10 days under most favorable circumstances. No one ever grows corn without having a garden of over 150 square feet should be without a few hills of sweet corn. In our opinion, the best early roasting ear of garden corn is Landreths' Earliest Table; the best early varieties of sweet corns are Spanish Gold, Whipple's Yellow, and the Vanguard. For midseason or main crop, we especially recommend Bloomsdale Golden, Golden Cross Bantam, Bloomcross P 39, Country Gentleman, Stowell's Evergreen and Landreths' Money Maker. Please note that the new Hybrids and Top Crossed Corns are all designated with a star (★). These corns are a very valuable asset to the Corn Family. They are very uniform in growth and ripening and produce larger yields of extra fine quality ears. Highly recommended by agricultural experiment stations and all Corn Experts.

★Bancross P39 (Golden Bantam Top Cross)—83 Days. Grains medium length and golden in color. Height of stalk about 5½ to 6 ft. Ears medium length and medium thickness, averaging about 7 to 7½ inches and short pointed. Rows 8 to 12. This is more resistant and more uniform than ordinary Golden Bantam, and produces a larger yield per acre.

½ lb. 30c lb. 60c 5 lbs. $2.05 10 lbs. $3.70

Barden's Wonder Bantam—80 Days. Grains medium length and golden in color. Height of stalk 5½ to 6 ft., ears long and thin, average length 7 to 8 inches, mostly 8 rows. This is an improved strain of the Golden Bantam type, with the stalk and ear somewhat longer. It matures about the same time as Golden Bantam, and the quality is just about as good.

½ lb. 30c lb. 60c 5 lbs. $2.05 10 lbs. $3.70

Black Mexican—84 Days. The grains are medium in length and black or purple in color. When at eating stage they are white. Height of stalk about 6½ to 7 feet, ears medium length and thin, averaging 8 inches long, usually 8 rows. As sweet if not sweeter than any of the golden types, and more tender.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

★BLOOMSDALE GOLDEN (Golden Sunrise)—89 Days. Grains medium length and golden in color. Height of stalk 6½ to 7 feet, ears long, thin, average length 8 or 9 inches long, mostly 10 to 14 rows, pointed. This is a new hybrid variety created by crossing Golden Bantam with Long Island Beauty, in 1925, by our Mr. Mills. Due to the confusion of our Golden Sunrise with Golden Sunshine and others of similar names, we have changed the name of Golden Sunrise to Bloomdale Golden. The yield is only slightly less than Golden Cross Bantam, the ears are larger and thicker. Resistant to Stewart's Wilt Disease.

½ lb. 26c lb. 45c 5 lbs. $1.85 10 lbs. $3.35
LANDRETHS’ MONEY MAKER CORN IS DELICIOUS

SUGAR or SWEET CORN—Continued

★BLOOMCROSS P39 (Topcrossed Bloomsdale Golden or Topcrossed Golden Sunrise) — 89 Days. This is identical to Bloomsdale Golden, except that Purdue 39, one of the parents of Golden Cross Bantam, is used as the seed parent and the stamens detasseled, while Bloomsdale Golden, planted in adjacent rows, furnishes the pollen. This makes a superior hybrid which is uniform in ripening and growth, and with a high yield per acre. Resistant to Stewart’s Wilt Disease.

½ lb. 30c lb. 50c 5 lbs. $2.05 10 lbs. $3.70

Country Gentleman or Shoe Peg—95 Days. Grains long and irregular, very narrow and white color. Stalks 5½ to 6 ft. Ears medium length and thickness, averaging 6 to 7 inches, irregular rows. Considered by many one of the best sweet corns for family garden and one of the most popular varieties used by commercial canners. The silk on Country Gentleman ears is always very red, and it can easily be distinguished by this feature. Fairly resistant to Stewart’s Wilt Disease.

½ lb. 15c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Evergreen, Stowell’s—90 Days. Grains long and white in color. Height of stalk about 7 to 8 ft. Ears medium length and thick. Average 6 to 7 inches long and short pointed. Rows mostly 12 to 16. This is the standard variety of sweet corn, much more of this variety being sold than any other. It is very popular for home, market gardeners and canners. Very productive.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Golden Giant—88 Days. Grains medium length and orange-yellow in color. Height of stalk 5½ to 6 ft. Ears medium length and thickness, average 6 to 7 inches and short pointed. Rows mostly 10 or 12. Subject to Stewart’s Wilt Disease, and therefore not to be grown where this disease is present.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

★Golden Sunrise (See Bloomsdale Golden)

Golden Sunshine—74 Days. Grains medium length and golden yellow in color. This is a good variety earlier than Golden Bantam. Height of stalk 4½ to 5 ft. Ears short and medium in thickness, average, 5 to 6 inches and short pointed. Rows mostly 10 or 12. Very susceptible to Stewart’s Wilt Disease, and therefore cannot be grown successfully where this disease is prevalent. Since Golden Sunshine is earlier than Golden Bantam many growers use it for a first early. The quality is good.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Howling Mob—82 Days. Grains medium length and white in color. Height of stalk 6 to 6½ ft. Ears medium length and thickness, averaging 7 to 8 inches and long pointed. Rows mostly 10 to 14. A popular mid-season variety. Fairly resistant to Stewart’s Wilt Disease.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Kendel’s Giant or Mammoth White Cory—76 Days. This is considered by many the best early large eared true sugar corn. Ears are 7½ to 8 inches in length, usually ten rowed, with white grains of excellent quality. A superior early variety.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

LANDRETHS’ MONEY MAKER—100 Days. Grains medium length, broad, and white in color. Height of stalk 7½ to 8 ft. Ears medium length and thin, average length 6 to 7 inches, long pointed. Cobs small in diameter. Rows mostly 8 to 12. This is the finest quality sweet corn on the market, being of excellent flavor and extremely tender. Fairly resistant to Stewart’s Wilt Disease. Very late in maturing. Money Maker should be planted as early as possible. It remains edible for a longer period than other varieties.

½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Hybrid Corn must be produced each year by crossing and will not give satisfactory results unless this is done. Do not try to save your own hybrid seed.
HYBRID AND TOP CROSSED CORNS PRODUCE LARGER YIELDS

SUGAR or SWEET CORN—Continued

Stowell’s Evergreen Landreths’ Money Maker

Long Island Beauty—98 Days. Grains medium length, color white. Height of stalk 8 to 9 ft. Ears long, thick and averaging 9 to 10 inches, short pointed. Rows mostly 12 to 16. Many years ago Long Island Beauty was produced by crossing Late Mammoth with Stowell’s Evergreen. A very popular late season variety with exceptionally large ears. Used principally where market gardeners supply a city trade which demands the most for their money. Fairly resistant to Stewart’s Wilt Disease. 1 lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

The Vanguard—72 Days. Grains medium length, color white. Height of stalk 5 to 5½ ft. Ears medium in length, thick, averaging 6 to 7 inches, short pointed. Rows mostly 12 to 16. About a week to ten days earlier than Howling Mob. A favorite in New Jersey for a first early sweet corn. Fairly resistant to Stewart’s Wilt Disease. Developed by A. L. Richie, a New Jersey grower. ½ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

Whipple’s Early Yellow—72 Days. Grains medium length, golden yellow in color. Height of stalk 5 to 5½ ft. Ears long and medium to thin in diameter, averaging 6 to 7 inches and mostly long pointed. Rows generally 10 to 14. Another early favorite of the New Jersey growers but unfortunately it is not resistant to Stewart’s Wilt Disease. ¹⁄₂ lb. 20c lb. 30c 5 lbs. $1.25 10 lbs. $2.30

★ Whipcross P 39 (Whipple’s Yellow Top Cross)—83 Days. Grains medium in length, golden yellow in color. The height of stalk is about the same as Whipple’s Yellow, as well as the length and thickness of the ear and the number of rows of kernels. It is somewhat resistant to wilt and therefore produces a greater yield than Whipple’s Yellow. It is uniform in maturing, and the crop is of good quality, better than open-pollinated Whipple’s Yellow. This variety is about 3 to 5 days earlier than Golden Cross Bantam. ½ lb. 30c lb. 50c 5 lbs. $2.05 10 lbs. $3.70

★ WHITE SUNRISE HYBRID—86 Days. Grains medium in length and white in color. Height of stalk 6 to 7 ft. Ears long and medium to thin in diameter, averaging 8 to 9 inches and mostly long pointed. Rows generally 10 to 14. Has been grown successfully where a variety is wanted that matures before Stowell’s. It is somewhat resistant to adverse weather and disease conditions. This is the white selection from the cross between Golden Bantam and Long Island Beauty which produced Bloomsdale Golden. ¹⁄₂ lb. 25c lb. 45c 5 lbs. $1.85 10 lbs. $3.35

GARDEN CORN—NOT SWEET

Adams Extra Early or Early Burlington—74 Days. Grains medium in length, white in color. Height of stalk 4½ to 5 feet. Ears short and thick, averaging 5 to 6 inches, short pointed. Rows generally 10 to 14. This is a white dent variety that is planted very early in the Spring for roasting ears, not as good quality as true sweet corn. ¹⁄₂ lb. 12c lb. 20c 5 lbs. 85c 10 lbs. $1.60

Adams Early—80 Days. Grains medium in length and white in color. Height of stalk 5 to 6 ft. Ears medium in length and thickness, average 6 to 7 inches and medium pointed. Rows generally 10 to 14. Another white dent variety used for roasting ears. ¹⁄₂ lb. 12c lb. 20c 5 lbs. 85c 10 lbs. $1.60

Be sure to purchase some of our Top Crossed and Hybrid Strains of Sweet Corn. They are well worth the difference in price.
LANDRETHS’ PENNA. CERTIFIED TOMATO AND PEPPER SEED HAS NO EQUAL

GARDEN CORN—Continued

LANDRETHS’ EARLIEST TABLE OR EARLY BEVERLY—72 Days. Grains medium in length, cream color. Height of stalk 4½ to 5 ft. Ears medium length and thin, averaging 6 to 7 inches, short pointed. Rows generally 8 or 10. This is a cream colored flint corn that may be planted very early in the Spring for early market, not a true sweet corn.

\[
\frac{1}{2} \text{ lb.} \quad 15c \quad 26c \quad 5 \text{ lbs.} \quad \$1.05 \quad 10 \text{ lbs.} \quad \$1.95
\]

Truckers Favorite—85 Days. Grains medium in length, white in color. Height of stalk 7½ to 8 ft. Ears medium length and thickness, average 7 to 8 inches, and short pointed. Rows generally 12 or 14. This is a favorite in the South for roasting ears, being a white dent. The long tight husk protects the ear from worms.

WHAT THE MATURITY FIGURES MEAN
Throughout the vegetable section of this catalog, figures representing the days to maturity follow immediately the names of the individual varieties. These represent the average days required from the planting of the seed to the harvest of the crop. They are particularly valuable for comparison as to the approximate maturity of various varieties of the same kind of vegetable. Weather conditions, kind of soil used, and locality of growing, however, obviously alter the exact number of days required.

FIELD CORN

Plant 10 to 15 pounds to the acre or about one bushel, 56 pounds to 5 acres. Originally a native of North and South America. Was grown in Peru centuries ago. We feel that our stocks are superior in quality and germination to the usual strains grown, as they are all grown in Bucks County, Pa., one of the four best corn counties, and Pennsylvania Field Corn is famous. It is all grown from the best hand selected, tipped stock which we select from the various fields which we are growing in this neighborhood. Landreths’ stock should not be compared with the cheap field corn, as our aim is to produce better quality, regardless of price.

BRISTOL EARLY YELLOW or White Capped Yellow Dent—100 Days. Grains are medium in length, broad, the color being light or lemon yellow with a white denting cap or top. Height of stalk 7 to 7½ ft. Ears long, thin, averaging 10 to 11 inches, short pointed. Rows generally 10 to 14 on a white cob. A fine quality corn, highly productive on good soil and even does well on poor ground, giving it the name of “Poor Man’s Corn” in some sections.

\[
\frac{1}{2} \text{ bu.} \quad $1.00 \quad \frac{1}{2} \text{ bu.} \quad $1.90 \quad \text{bu.} \quad $3.50
\]

Eureka White—130 Days. Grains are medium to long, broad, the color being white with a distinctly denting cap or top. Height of stalk 10 to 11 ft. Ears are medium in length and thickness, averaging 8 to 9 inches, short pointed. Rows generally 10 to 14 on a red cob. This variety is similar to Golden Dent but the grains are not so long and are wider than Golden Dent. It is ten days later than Golden Dent.

\[
\frac{1}{2} \text{ bu.} \quad $1.16 \quad \frac{1}{2} \text{ bu.} \quad $2.00 \quad \text{bu.} \quad $3.75
\]

Golden Beauty or Sweepstakes—120 Days. Grains are medium in length and very broad; the color being rich, golden yellow with a rather shallow denting cap or tip. Height of stalk about 9 to 10 ft. Ears medium in length and thick, averaging 8 to 9 inches, short pointed. Rows generally 10 to 14 on a red cob. This variety is similar to Golden Dent but the grains are not so long and are wider than Golden Dent. It is ten days later than Golden Dent.

Bristol Early Yellow
FIELD CORN—Continued

Golden Dent—110 Days. Grains are medium to long, medium width; the color being a glossy golden yellow with a distinctly dented cap or top. Height of stalk 8½ to 9 ft. Ears medium in length and thick, averaging 8 to 9 inches and short pointed. Rows generally 14 to 18 on a red cob. This variety is the most popular of the field corns in this part of the country, because it is resistant to adverse weather conditions and produces crops where others fail.

Lancaster County Sure Crop—110 Days. Grains are medium in length and width, the color being orange yellow on the sides and the shallow dent on the cap or top being yellow. Height of stalk 8½ to 9 ft. Ears long, thin, averaging 11 to 12 inches, long, pointed. Rows generally 12 or 14 on a red cob. This variety is the most popular of the field corns in this part of the country, because it is resistant to adverse weather conditions and produces crops where others fail.

Old Cabin Home or Hickory King—125 Days. Kernels white, glazed, and extraordinarily broad. Height of stalk about 10 ft. Ears 7 to 8 inches long, medium width. 8 and 10 rows on a small cob.

Penna. Long Yellow Flint or 8-Rowed Yellow—90 Days. Kernels flinty, hard and glazed, the grains are amber in color. Height 7 to 8 ft. very early. Often used by farmers to replant, assuring them of getting ripe corn before frost. Ears long and thin, average 11 to 12 inches, usually 8 rows, some 10. Cob white.

Snowflake or Boone County White—120 Days. White glazed with dull white dent to gourd crown. Height of stalk 9 to 10 ft. Ears borne high on stalk. Long, thick ears, averaging 9 to 10 inches, short pointed. Rows mostly 14 to 18 on a white cob. Popular in the Cotton States. One of the best ensilage corns on the market. Will ripen in some parts of New York where White Eureka does not.

White Rice—110 Days. Grains long and pointed, somewhat resembling rice, from which it takes its name. Height of stalk 5 to 6 ft. 2 to 3 ears on a stalk. A handsome, very prolific variety of white pop corn. Ears 5 to 7 inches long, having 14 to 20 rows of kernels. This variety is considered one of the best varieties of corn for popping purposes.

Japanese or Australian Hulless—95 Days. Grains long and pointed, and white in color. Height of stalk about 5 ft. This is a dwarf growing sort, producing an abundance of very thick short ears 3½ to 5 inches long. These are closely set with narrow tight grains, some ears having 30 to 40 rows of kernels. This variety is superior to White Rice. The grains are hulless which makes them when popped the most tender of any pop corn on the market. Once tried will always be used.

POP CORN

Golden Queen—115 Days. Golden grain, creamy white when popped. Height of stalk 6½ to 7 feet. Two or three ears on a stalk. Length of ear 5 to 7 inches, thin. Practically identical in every way to the Plain White, except that the grain is a golden cream color. One of the popular popping varieties.

Japanese or Australian Hulless—95 Days. Grains long and pointed, and white in color. Height of stalk about 5 ft. This is a dwarf growing sort, producing an abundance of very thick short ears 3½ to 5 inches long. These are closely set with narrow tight grains, some ears having 30 to 40 rows of kernels. This variety is superior to White Rice. The grains are hulless which makes them when popped the most tender of any pop corn on the market. Once tried will always be used.
A MAN WITH A GARDEN IS Seldom Hungry

27

COLLARDS
One Ounce of Seed for 100 Yards of Row
A Loose-leaved plant of the Cabbage family

Georgia Southern or Creole—80 Days. Cabbage greens. The leaves can be blanched white as Celery and made tender by enveloping each plant from the top downward with a large paper or muslin bag during its late growth. Stems long, 2 to 3 feet, white or golden, can be grown in sections where Cabbages do not thrive.

Pkt. 5c oz. 10c 1 lb. 20c lb. 75c

Cabbage Collards—90 Days. A cross between a Cabbage and a Collard. Of Georgia origin and well suited to the South.

Pkt. 5c oz. 10c 1 lb. 20c lb. 75c

CORN SALAD
Sometimes Called Fetticus
Sow Ten Ounces of Seed to 100 Yards of Row

Broad-Leaved (Large Seeded)—60 Days. Used as a small Salad throughout the Winter and Spring. Sometimes called Lamb’s Lettuce. For quick growing sow thickly in drills, cover slightly first of Autumn. Height 4 inches.

Pkt. 5c oz. 16c 1 lb. 45c lb. $1.50
THE SUCCESSFUL SEEDSMAN CAREFULLY CHECKS HIS STOCKS

View of Landreths' Bloomsdale Trial Ground. Thousands of samples are tested annually.
CUCUMBER

Origin not positively known but thought to be in India. Four Ozs. of Seed Will Plant 100 Yds. of Hills. Plant Four Lbs. to the Acre. A Good Crop Cannot be Grown on Thin Soil. Seed breaks ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse. For early use plant in hills 4 x 4 feet apart, on a warm border, when the Cherry is in bloom or when danger of frost is past. For pickles plant early in August to get 2 to 3 inch fruit in late September.

Among many people the phrase white spine is not understood. The spines on the cucumber are of two kinds, white and black. They have nothing to do with the outside color of the cucumber for they are simply the little prickly white or black projections on the skin of the fruit. Sometimes called Westerfield Pickle. Vine vigorous, foliage broad. Fruit rounded form, choice green color with smooth skin, few spines. We can recommend this variety as being the most desirable, the sturdiest and hardiest of all pickles.

Davis Perfect—70 Days. Here we have a Cucumber of intensely dark green skin but a shy producer of seeds. Flesh very white. Fine for slicing. A most desirable variety for both family and market garden cultivation. Always dark green, smooth skin. 9 to 10 inches long, tapering to both ends. It more closely resembles a hothouse variety than any other.

Early Fortune—64 Days. An early, long, slim, well-shaped, white spine, of a deep green color, retaining green color longer than most other sorts. Fruit about 8 inches. Very productive. The quality sold by Landreth is not surpassed by any other Cucumber bearing this name. Very choice and popular as a long distance shipper. One of the best; plant with the utmost confidence.

Boston Pickle—58 Days. A very productive variety; robust in growth; dark green, paling to light green at tip. Warty and black spine. Very productive. The quality sold by Landreth is not surpassed by any other Cucumber bearing this name. Very choice and popular as a long distance shipper. One of the best; plant with the utmost confidence.

Chicago Pickle—58 Days. Sometimes called Westerfield Pickle. Vine vigorous, foliage broad. Fruit rounded form, choice green color with smooth skin, few spines. We can recommend this variety as being the most desirable, the sturdiest and hardiest of all pickles.

Jersey Pickle—66 Days. A short black-spined, productive sort, having the reputation of ripening better than any other variety and of holding its color. Early Spring sowing will develop fruit of pickling size 2 to 3 inches, in 50 days. Good green color at stem, and paling to light yellowish green at tip.

Arlington White Spine—66 Days. A cucumber extensively in Florida to ship North. A most desirable variety for both family and market gardeners and is equally desirable as a long distance shipper. One of the greenest and earliest of the Long White Spine Varieties. Hardy, large fruited, excellent shape, and is uniform from end to end. Of extended or long drawn out period of picking and of very favorable reputation among Market Gardeners. Always to be picked out in a competitive trial as one of the best. Used most extensively in Florida to ship North.

THE BEST GARDENERS MUST HAVE GOOD SEED
CUCUMBER—Continued

Klondike—70 Days. A handsome white spined medium early sort. Very dark color and an excellent slicer. Fruit grows 7 to 8 inches in length and usually of uniform shape. Color is very dark green slightly striped with white at ends. Hot sun does not seem to affect this Cucumber as much as some others.

Pkt. 5c oz. 15c ½ lb. 45c lb. $1.50

Longfellow or Vaughan—74 Days. This is probably the finest of the large varieties. When mature it measures about 15 inches in length, quite prolific, straight, uniform, and is a fine dark green color.

Pkt. 6c oz. 20c ½ lb. 60c lb. $2.00

LANDRETHS' EXTRAORDINARY—66 Days. So very superior in every particular to the ordinary stock of White Spine as not to be classed with it. Vine a strong grower, foliage broad leaved, deep green, close-jointed. Does not sunburn. Blooms early and sets fruit in every blossom; consequently very prolific. Fruit 8 ½ to 10 inches long, slightly tapering at both ends. Pickles can be gathered in 50 days. Fine for slicing and can be picked in nine weeks. A fine variety of White Spine. It is unsurpassed as a shipping Cucumber.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Long Green Improved or London—70 Days. A Black Spine variety. Vines very vigorous and productive. One of the best, if not the best, variety for slicing and salting. A very shy seeder; consequently, hard to get farmers to grow for seed; but very prolific bearer. A universal favorite and more largely sold than any lone green cucumber on the market. Hardy and disease resistant, fruit 12 to 13 inches long, somewhat pointed at the ends with warts particularly on stem end. See photograph on page 31.

Pkt. 5c oz. 15c ½ lb. 45c lb. $1.50

New Hybrid—66 Days. This is identical to Clark's Special or Woodruff's Hybrid. The size and shape are approximately the same as Early Fortune, possibly an inch longer and slightly thicker. It is later than Early Fortune and not as heavy a cropper. It is particularly desirable because of its intense dark green color and its excellent long distance shipping qualities.

Pkt. 5c oz. 15c ½ lb. 45c lb. $1.50

Short Prolific or Green Prolific Pickle—66 Days. A short-vined, short-fruitted, productive variety, producing fruit for pickling in a comparatively short time. Black Spine, an abundant bearer, highly recommended for pickles, for which it is used by many of the most famous pickling establishments. Short vine allows planting in rows as close as 2 ½ feet.

Pkt. 5c oz. 15c ½ lb. 45c lb. $1.40
CUCUMBER—Continued

Snow's Prolific Pickle—56 Days. In appearance of fruit a variation of the "Chicago Pickle," but considerably longer in vine than "Short Prolific." The fruit of "Snow's Prolific" is more uniformly even in diameter from end to end, small, early, dark green, both ends blunt. It has a reputation of being more productive than any of its class and in every way suitable for pickling, consequently used to a very large extent by the best pickle houses. "Snow's Prolific Pickle" is more universally used than any other pickling variety as it is earlier and slightly more prolific. Our stock is selected with the greatest care.

Pkt. 6c oz. 15c ½ lb. 45c lb. $1.40

Gherkin, Burr or West India Gherkin—65 Days. A round, prickly Cucumber. Used for pickles only. The seed gets very hard, consequently, before planting, it should be soaked well as it takes it so long to sprout under ordinary conditions. Form of fruit resembles a horse chestnut burr.

Pkt. 5c oz. 20c ½ lb. 55c lb. $1.80

Pkt. 5c oz. 30c ½ lb. 85c lb. $2.75

EGG PLANT

Egg Plant is a native of Africa, years ago in the Southern States called "Guinea Squash." One Oz. of Seed Will Provide Enough Plants for One-Eighth of an Acre. Matures for Table in About 126 Days After Sprouting. Seed breaks ground in 9 days. One inch high in 12 days under most favorable circumstances in greenhouse.

In this fruit, we have one of the finest for the garden on the market. Plants are a little difficult to raise, owing to the fact that the seed germinates slowly and should always be started in a hotbed, or on a window ledge in the house. After the plants show two rough leaves they should be transplanted 3 to 4 inches apart to give them room to develop, so that after they have gotten sturdy they can be planted in the open garden. If the ground is rich with proper fertilizer, with care it will not be difficult to produce first-class fruit five to six inches in diameter.

About 5000 plants are required to set an acre. The plants will produce an average of 4 to 5 fruit—sometimes 10—weighing 5 to 6 pounds. Our selection of seed is taken from the best fruit that can be grown and we have no hesitancy in recommending our seed as unsurpassed. Years ago, the vines of all varieties of Egg Plant had spines, or thorns, but by constant selection, the growth of all Spines has been eliminated.

Black Beauty—125 Days. This variety is earlier than the Landreths' Large Round Purple, but it is slightly smaller. Owing to the fact that the color is black, and it does not lose its color it is very popular. Do not confuse the Black Beauty with the old Black Pekin as it is twice as large. Height of vine 28 to 34 in.

Pkt. 5c oz. 35c ½ lb. $1.20 lb. $4.00

Landreths' Large Round Purple—130 Days. This selection is decidedly the best type of Egg Plant that we have been able to secure after many years of selection. It is productive and vigorous, the fruit often reaching a weight of 10 to 12 pounds. Fruit may be described as chunky, broad at the bottom, and flattened—diameter nearly equal to the length. Color when grown on soil of proper quality a deep purple, often appearing almost black, although not as black as the Black Beauty. The soil has much to do with the depth of color. Single bushes of this variety on good soil often reach a diameter of three feet, and produce 8 to 10 large fruit.

Pkt. 5c oz. 40c ½ lb. $1.35 lb. $4.50
EGG PLANT—Continued

New York Purple—130 Days. This is probably the oldest and best known variety on the market today. It is early and produces four to six very large fruit of excellent quality. The fruit is better if grown on a sandy loam and should be planted accordingly if possible.

Pkt. 5c. oz. 35c ½ lb. $1.20 lb. $4.00

Florida High Bush—130 Days. We cannot recommend this variety nearly as highly as we do the Landreths' Large Round Purple, or Black Beauty, although it is very popular in some sections. The fruit is not as large nor as round as the New York Improved. Vines 26 to 32 inches, more vigorous, and a continuous bearer.

Pkt. 5c. oz. 35c ½ lb. $1.20 lb. $4.00

Manatee Special—115 Days. A distinct Florida development evidently a cross between a Florida High Bush and Black Beauty. The fruit is shorter and thicker than the High Bush. Beautiful rich black color. Withstands heat and drought better than other varieties.

Pkt. 5c. oz. 40c ½ lb. $1.35 lb. $4.50

ENDIVE

Native of China and Japan. Sow Two Ounces of Seed for 100 Yards of Row. Plant Three Pounds to the Acre. Seed breaks ground in 6 days. One inch high in 10 days under most favorable circumstances in greenhouse. Sow in the Spring as soon as the earth is free from frost and replant to within 60 days of Autumn frost. Drill in rows 2 feet apart, and thin the plants to 8 inches. Tie up the loose leaves or cover with a pot to blanch the salad. This is one of the most palatable Vegetables which can be used as a salad as well as a garnish to table vegetables. Endive, when grown properly and bleached with care, will produce one of the best salads that can be grown. Few people appreciate its value until they have eaten properly bleached Endive grown by a gardener who knows his business.

Endive can be eaten uncooked in salad forms or boiled like Spinach; a distinct flavor and very palatable when bleached. It is of rapid growth, highly esteemed and may be sown, except in Winter, at all seasons of the year. The plants are of rosette shape and can be tied up and bleached pure white like Celery. Especially desirable as a Winter salad. Grown largely by Market Gardeners.

Broad-Leaved Batavian or Escarolle—90 Days. Foliage broad and flat, 16 inches in diameter—deep green leaves with thick midrib. Leaves are exceedingly palatable when well bleached. Stands dry weather better than any other sort of Endive. We believe that this variety is unsurpassed for salad when it is bleached by an experienced gardener.

Pkt. 5c. oz. 16c ½ lb. 35c lb. $1.10

Giant Green Curled or Ruffick—86 Days. This variety is sometimes called Oyster, as in the Eastern States where Oysters on the shell are exhibited, it is frequently used as a garnish to display them. This is a hardy growing variety, 16 to 18 inches in diameter, with deep green leaves. When tied up these plants of red footstalks bleach white very quickly. It is a great favorite with those who desire a curly Endive. See photo.

Pkt. 5c. oz. 16c ½ lb. 35c lb. $1.10

True Heart or Full Heart—86 Days. An Improved Batavian. Same as Batavian only broader and thicker head at eating stage. Excellent shipping qualities for market gardener.

Pkt. 5c. oz. 16c ½ lb. 45c lb. $1.50

White Curled—96 Days. A variety of white or light-colored leaves. Distinct. More delicate and smaller in form than the large green curled. Less astringent than the green and is slightly easier to bleach. Used extensively for a decoration as well as a salad.

Pkt. 5c. oz. 16c ½ lb. 35c lb. $1.10
Landreths' GRASSES of Proven Quality

The Secret of Producing Velvet Turf

It is just as natural for grass to grow on a lawn as it is for hair to grow on a head. In both cases, however, certain conditions may destroy or prevent the growth.

How can I obtain a velvet turf? This question is asked every seedsman thousands of times a year. First of all, know something about your soil. Litmus or Litmus paper may be obtained in small quantities from most druggists. Allow this liquid or paper to come in contact with your soil in various parts of the lawn. If it turns very blue, then it is too alkaline and should have a fertilizer to control this condition. If it turns very red it is too acidic and should have limestone applied. Provided it remains about the same color, of course there is little to fear, although a slightly acidic soil is desirable. If you have difficulty ascertaining the condition of your soil, your seed dealer will be glad to aid you. If the local seedsman cannot help, mail a small sample of your soil to D. Landreth Seed Company or your State Experimental Station. We urge the use of Arsenate of Lead on lawns which are located in the Japanese Beetle area. This is important as no matter how good the seed may be, your grass cannot thrive on grub infested soil. As an all purpose fertilizer for lawns we recommend one with a 4-12-4 analysis, although other complete fertilizers may be used satisfactorily.

Level the ground as best you can and if planting in Spring or Summer wait two weeks before sowing seed in order that some of the weeds may start to grow. These should then be dug out. This delay is not necessary in Fall planting, as there is little to fear from weeds at that time.

On pages 35 and 36 may be found the correct mixtures for use under certain conditions. To plant an ordinary lawn mixture in the shade is like running your automobile on kerosene. The car may run for a short time or perhaps not at all. Landreth Shady Place is really different from the other mixtures and actually contains the grasses which you see growing under the trees in a wild state in almost every pasture. The New Jersey Department of Agriculture has issued special formulas for shade and other unusual conditions, as have many other institutions in various sections of the country. Ask your seed dealer to write the D. Landreth Seed Company for special mixtures for your particular conditions if you do not see what you want listed in this catalog. We have hundreds of formulas known to be good and we can enable you to grow grass where many fail.

Sow the seed evenly, allowing 100 to 125 pounds per acre for best results, or about one pound for 300 square feet. In renovating lawns as much seed need not be used. When watering during the Summer months be sure to soak the ground and do not sprinkle as this tends to bring the roots to the surface. Landreths' Grass Seeds are tested by the Pennsylvania Department of Agriculture for purity and germination. They are field-tested on our Bloomsdale Experimental Farm at Bristol, Pennsylvania, and are imported from the finest growing districts in the United States and abroad.
Trials of Lawn Grass Mixtures are shown in the circle. Individual Varieties are pictured in separate plots on the outside. The picture shows a part of 100 separate turf plots. They are constantly on display at Bloomsdale Farm, Bristol, Penna.
LAWN MIXTURES

Shady Place—If possible plant this mixture very early in the Spring or late in the Autumn for best results. Special shade grasses are used and are necessary for success in shaded areas. 50c per lb., 45c for 20 lbs., 40c for 50 lbs. or over.

Terrace or Embankment—Special grasses with deep roots which are particularly drought resistant are necessary for the successful growing of grass on hillsides. This mixture is designed to meet special conditions. 45c per lb., 40c for 20 lbs., 35c for 50 lbs. or over.

Seashore—Composed of grasses recommended by the N. J. Dept. of Agriculture for good results on sandy soil. 45c per lb., 40c for 20 lbs., 35c for 50 lbs. or over.

Pasture—Contains seed producing permanent, dense and deep-rooting turf and clover of inviting, sweet and nourishing quality. 35c per lb., 30c for 20 lbs., 28c for 50 lbs. or over.

Southern Winter—Used extensively in the South and contains Rye Grass and Bermuda. 30c per lb., 26c for 20 lbs., 22c for 50 lbs. or over.

Write for prices on Special Mixtures made up according to your own formula.

Landreths' Never Die Mixture Produces Beautiful Turf

There is no greater asset to any building than a well-kept lawn. Cheap mixtures are composed of annual grasses which are hard to cut and must be planted so often that they become expensive. Most of them produce weeds and no end of work, money and time are required for their elimination. Landreths' Lawn Grass Seed contains only the best fancy recleaned grasses.

In most localities grass seed is planted from March until the end of June and from the 15th of August until the first killing frost. A bushel of Landreths' Lawn Grass Seed officially weighs 20 pounds but in reality will be heavier. All of Landreths' Lawn Seed is sold under seal. It may be procured in boxes of $1, $1 and 1 pound sizes, wrapped in Moistureproof Cellophane. It is also sold in 1, 2, 3, 5, 10, 20, 50 and 100 pound bags. Every container has a complete record of the analysis and contents of the mixture.

Superior Bent Mixture—Containing the famous Creeping Bent Seed, this lawn mixture is recommended where something outstanding is desired. Only perennial grasses are used and clover may be inserted or not according to the customer's desire. 55c per lb., 50c for 20 lbs., 45c for 50 lbs. or over.

Landreths' Never Die—One of the most famous and satisfactory seed mixtures on the market. It contains only proven perennial grasses of beauty and service. 50c per lb., 45c for 20 lbs. or over, 40c for 50 lbs. or over.

Bloomsdale—This mixture is composed of an old-fashioned formula of Kentucky Blue Grass and Fancy Recleaned Red Top. Turf produced from this seed grows better with each succeeding year. This mixture does not contain clover unless specially ordered. 45c per lb., 45c for 20 lbs., 35c for 50 lbs. or over.

Fairmount Park—Recommended for poor soil as it will produce a heavy, thick turf and is properly blended to produce good sod throughout the growing season. 40c per lb., 35c for 20 lbs., 30c for 50 lbs. or over.

Evergreen—This is a quick growing mixture, free of noxious weed seeds and low in inert matter. You will be pleased with its results. 35c per lb., 30c for 20 lbs., 25c for 50 lbs. or over.

New York Park—Sold by Landreth for many years. 30c per lb., 25c for 20 lbs., 22c for 50 lbs. or over.

Popular—Very quick growing. Satisfactory for the price. 25c per lb., 20c for 20 lbs. 18c for 50 lbs. or over.
Ten thousand field hockey enthusiasts praised the beautiful turf at the Philadelphia Cricket Club during the World's Triennial Tournament held in 1936. Photo shows the American team shooting at the English goal. Landreths' Seeds used exclusively.

SPORTS TURF

It is important to have grasses which have long, tough roots and are able to withstand sharp spikes, cleats and drought. In preparing these mixtures we have consulted numerous experts and groundsmen, and have taken all types of soil and climate into consideration. Landreths' Athletic Mixtures do not contain clover unless ordered specially. Our grasses are tested by the Penna. Department of Agriculture for purity and germination.

BASEBALL, FOOTBALL, SOCCER AND FIELD HOCKEY

Landreths' Athletic Field—A mixture which will withstand the hard and steady wear from cleats and spikes. The grasses contained are hardy and durable. 45c per lb., 40c for 50 lbs., 35c for 100 lbs. or over.

TENNIS AND GOLF

Landreths' Ruffwear—This mixture contains a number of grasses properly blended to withstand the dry spells of July and August and the rainy season of Spring. It is used on all parts of the tennis court and golf course fairway, proving the sportsman's delight as it remains green the entire playing season and is just made for rough wear. 60c per lb., 50c for 50 lbs., 46c for 100 lbs. or over.

Easy Eagle—The putting green supreme is formed after seeding with this Mixture. It contains the finest bent grasses and is smooth, lasting and continually green. Construction, fertilization and treatment recommendations gladly given without charge. $1.00 per lb., 90c for 50 lbs., 80c for 100 lbs. or over.

AIR PORT

Keystone State—The grasses used to produce this mixture are those which are particularly recommended by the Bureau of Aeronautics of the United States Department of Agriculture at Washington. 40c per lb., 35c for 50 lbs., 30c for 100 lbs. or over.

THE BENTS

(These prices are subject to market change)

Colonial—Astoria, Rhode Island, New Zealand and Prince Edward Island Bents (Agrostis tenuis)—This is one of the most popular bents used today. Good turf may be produced in one season. It is adapted to both moist and dry soils, clay and sandy soils if well drained, resistant to cold and fairly tolerant of heat and acid soils. It is upright in growth and cannot be classified as a true creeper in the East. Used for golf greens, fairways and lawns. Our stock is Blue tag certified by the Oregon Department of Agriculture. 32 lbs. per bu. 5 lbs. per 1,000 sq. ft. $1.00 per lb., 90c for 50 lbs., 85c for 100 lbs. or over.

Seaside (Agrostis palustris)—The seed we offer is Blue Tag Certified by the Oregon Agricultural Department and is grown in Coos County. It is a true creeping bent. This bent is particularly recommended as the most satisfactory for golf putting greens. 32 lbs. per bu. 4 lbs. per 1,000 sq. ft. $1.10 per lb., 1.00 for 50 lbs., 90c for 100 lbs. or over.

South German Mixed—This bent withstands hard usage and is composed of about 75 percent Colonial Bent, 15 percent Velvet Bent and 1 percent Creeping Bent. It is recommended for the shade. 20 lbs. per bu. 5 lbs. per 1,000 sq. ft. $1.40 per lb., 1.30 for 50 lbs., $1.20 for 100 lbs. or over.

Landreth Velvet (Agrostis Canina)—Our own strain. Supply limited. Most outstanding of the bents. Best for shaded areas. Most beautiful grass in the world. 3 lbs. per 1,000 sq. ft. $3.00 per lb.

Write us in regard to your turf problems.
WE HANDLE ONLY PURE SEED OF HIGH GERMINATION

GRASS, CLOVER AND FARM SEEDS

These Prices are Subject to Market Change—Ask for Special Prices on Large Quantities
All Seed Tested and Analyzed by the Penna. Dept. of Agriculture

Bermuda (Cynodon dactylon)—35 lbs. per bu. A very rapid creeper. Used in the South. Not very hardy in the North. Perennial. 45c per lb., 40c for 50 lbs. or over.

Blue Grass, Canadian (Poa compressa)—14 lbs. per bu. For general use inferior to Kentucky Blue. Superior in dry, shady or impoverished soils. Good pasture grass. Perennial. 45c per lb., 40c for 50 lbs. or over.

Blue Grass, Kentucky (Poa pratensis)—14 lbs. per bu. Used a great deal for lawns. Produces a good nutritious pastureage. Deep rooting and attractive color. Perennial. 45c per lb., 35c for 50 lbs. or over.

Fescue, Chewing's (Festuca chewings)—New Zealand Grown. 24 lbs. per bu. This grass succeeds in all kinds of soils. We now import it in refrigerator boats assuring high germination. Excellent shade grass particularly in light soils, Perennial. 60c per lb., 50c for 50 lbs. or over.

Fescue, Fine Leaved (Festuca tenuifolia)—A variety of sheep fescue. It is an excellent shade grass, tolerant of heat and dry soil. Dark green in color. Perennial. 80c per lb., 70c for 50 lbs. or over.

Fescue, Meadow or English Blue (Festuca elatior)—24 lbs. per bu. Sometimes known as Evergreen Grass. Used for pastures and lawns. Perennial. 30c per lb., 25c for 50 lbs. or over.

Fescue, Genuine Creeping Red (Festuca rubra)—15 lbs. per bu. Do not confuse this with the ordinary Red Fescue. It is the true creeping type with dark green, narrow blades. Forms a dense, permanent, velvety turf free from weeds and is adapted to shade and reasonably poor soil. $1.20 per lb., $1.10 for 50 lbs. or over.

Fescue-Sheep, Ordinary Red, or Hard (Festuca ovina)—14 lbs. per bu. There is a slight difference between the strains of Sheep, Ordinary Red (not Creeping) and Hard Fescue, but of recent years the strains have been substituted so regularly and have been so mixed that we are offering only one strain. This is excellent for pastures and withstands much heat and drought. 60c per lb., 55c for 50 lbs. or over.

Orchard Grass (Dactylis glomerata)—14 lbs. per bu. A very valuable pastureage and hay grass. Perennial. 35c per lb., 30c for 50 lbs. or over.

Red Top, Fancy Reclined (Agrostis alba)—32 lbs. per bu. Sometimes called Herds Grass. Grows best in rich, moist soils. Excellent for lawn, hay or permanent pastureage. Biennial. 45c per lb., 35c for 50 lbs. or over.

Red Top, Ordinary or Unhulled (Agrostis alba)—30 lbs. per acre. 14 lbs. per bu. See Fancy Red Top. 25c per lb., 20c for 50 lbs. or over.

Rough Stalked Meadow (Poa trivialis)—14 lbs. per bu. This is known as "The blue grass of the family and characteristics as blue grass. Not for sunny places. 50c per lb., 45c for 50 lbs. or over.

Rye Grass, Domestic—24 lbs. per bu. For most purposes inferior to other rye grasses. Part annual and part perennial. 16c per lb., 12c for 50 lbs. or over.

Rye Grass, Italian (Lolium italicum)—24 lbs. per bu. True imported strain. Good for a quick hay crop. Annual. 30c per lb., 25c for 50 lbs. or over.

Rye Grass, Perennial (Lolium perenne)—Often called English Rye Grass. 24 lbs. per bu. Succeeds as a pastureage, hay crop or lawn grass on almost any soil. Perennial. 25c per lb., 20c for 50 lbs. or over.

Rye Grass, Pacey's Strain (Perennial)—30c per lb., 25c for 50 lbs. or over.

Timothy (Phleum pratense)—45 lbs. per bu. Used with Red Top for pastures but is not recommended for growing alone. Perennial. 20c per lb., 14c for 45 lbs. or over.

White Dutch Clover (Trifolium repens)—60 lbs. per bu. Used extensively for lawns. We recommend in using this as pasturage to include some perennial grass. Perennial. 60c per lb., 45c for 25 lbs.

Alfalfa (Medicago sativa)—20 lbs. per acre. 60 lbs. per bu. Perennial. 35c per lb., 32c for 10 lbs.

Alsike (Trifolium hybridum)—12 lbs. per acre. 60 lbs. per bu. Perennial. 45c per lb., 40c for 10 lbs.

Crimson or Scarlet (Trifolium incarnatum)—20 lbs. per acre. 60 lbs. per bu. Annual. 25c per lb., 20c for 10 lbs.

Red (Trifolium pratense)—12 lbs. per acre. 60 lbs. per bu. Domestic. Perennial. 45c per lb., 40c for 10 lbs.

SUDAN GRASS—Ask for Prices.
### HERBS

**Sow One Ounce to Ten Yards of Row.** Herbs are very ornamental, many bearing really lovely flowers; they of course impart a strong, spicy taste and odor to various culinary operations. Those marked with a ★ are perennial, and when once established, may be preserved for years. Of these, sow the seed very carefully in seed-beds about the middle of Spring, and the following Autumn or Spring transplant to convenient situations. The others are annuals.

#### Anise—65 Days.
Flowers White. Root and leaf somewhat like celery. 14 to 16 inches tall. Used for garnishing, seasoning and cordials. Pkt. 6c oz. 15c ½ lb. 46c lb. $1.55

#### Balm—55 Days.
Whitish Flowers. Lemon flavored leaves used in seasoning liqueurs, etc. Pkt. 10c

#### Borage—60 Days.
Flowers excellent for bees, and for garnishing cool drinks. Leaves used in salads. Flowers blue, star shaped. Flavor is like cucumber. Foliage very fuzzy. Pkt. 5c oz. 20c ½ lb. 56c lb. $1.75

#### Caraway—60 Days.
Cultivated for seeds which are used in seasoning confectionery, pastry and meat. Flowers White. Foliage like carrot. Pkt. 6c oz. 15c ½ lb. 30c lb. $1.00

#### Chervil, Curled—60 Days.
Divided light green leaves. Used in seasoning salads. Pkt. 5c oz. 15c ½ lb. 40c lb. $1.25

#### Chives—Tops used for flavoring. Endurves for years. Pkt. 6c oz. 40c ½ lb. $1.25

#### Coriander—50 Days.
24 inches. Seeds used for seasoning. Flowers white. Pkt. 6c oz. 15c ½ lb. 30c lb. $1.00

#### Dill, Mammoth—70 Days.
24 inches. Seeds very flat, used in flavoring pickles and preserves. Foliage small and feathery, and flowers attractive yellow. Pkt. 6c oz. 10c ½ lb. 25c lb. 75c

#### Fennel Florence—60 Days.
Bulb is usually boiled and used in fish soups. The stalks when blanched are often eaten like celery. Pkt. 5c oz. 30c ½ lb. 56c lb. $1.75

#### Fennel Sweet—60 Days.
24 inches, thick-set plant. Leaves large and finely cut, almost forming a head with wide, straight interior. Pkt. 5c oz. 15c ½ lb. 46c lb. $1.50

#### Horehound—55 Days.
Leaves used in flavoring and in cough remedies. Pkt. 10c oz. 50c

#### Lavender—60 Days.
Seed germinates very slowly. Flowers used for soothing clothes, and for manufacturing perfume. Flowers Lilac-blue. Pkt. 6c oz. 30c ½ lb. $1.00

#### Mint, Old Fashioned—70 Days.
For making mint sauce and julep. Spreads rapidly by means of underground shoots. Pkt. 10c

#### Pennyroyal—65 Days.
Leaves are used for seasoning puddings. Low growing plant with bluish-lilac flowers. Pkt. 10c

#### Pimpinella Anisum.
See Anise.

#### Rosemary—70 Days.
Foliage dark and shining. Flowers light blue. Used in seasoning and for aromatic oil. Pkt. 10c oz. 75c

#### Sage—70 Days.
Long gray-silver leaves produced in profusion, used for seasoning stuffings. Plant 12 inches tall. Flowers blue. Pkt. 5c oz. 35c ½ lb. $1.06 lb. $3.50

#### Sorrel—70 Days.
Can be eaten raw for salad, or boiled like spinach. Pkt. 5c oz. 15c ½ lb. 56c lb. $1.75

#### Summer Savory—60 Days.
Small purple flowers, used for coloring and flavoring. Pkt. 6c oz. 15c ½ lb. 40c lb. $1.25

#### Sweet Basil—60 Days.
Tall, light green. Very aromatic. Used for seasoning. Very productive in foliage. 18 inches. Flowers purple. Pkt. 6c oz. 20c ½ lb. 60c

#### Sweet Marjoram—70 Days.
Small mouse-eared foliage used for seasoning. 18 inches. Flowers purple. Pkt. 5c oz. 25c ¼ lb. 75c lb. $2.50

#### Sweet Woodruff.
See Waldmeister.

#### Tarragon—65 Days.
The leaves, dried or fresh, are steeped in vinegar, which adds a much desired flavor. Pkt. 10c

#### Thyme, English—70 Days.
Used for seasoning and for making tea for nervous headaches. Small dark-green wiry foliage. Lilac flowers. Pkt. 5c oz. 35c ½ lb. $1.20 lb. $4.00

#### Thyme, French—70 Days.
Common or Narrow Leaf Thyme. Leaves and young shoots used for seasoning. Lilac flowers. Pkt. 6c oz. 50c ½ lb. $1.75

#### Waldmeister (Asperula odorata)—70 Days.
Used for seasoning clothes and flavoring purposes. Pkt. 10c

#### Wormwood—70 Days.
For flavoring, medicine and liqueurs. Pkt. 10c oz. 45c

**See description of grasses for additional information.**
KALE or BORECOLE

Native of Europe. One Ounce of Seed Will Sow 100 Yards of Row. Four Pounds to the Acre. Seed breaks ground in 5 days. One inch high in 8 days under most favorable circumstances in greenhouse. This is a very valuable plant for greens. A curly, loose-leaved plant of the Cabbage family, of hardy character and succeeding on almost any soil.

Sow in the early Spring when the Oak is in full leaf, again in the early Autumn. Drill in rows of 2½ feet and thin to 8 or 10 inches, according to vigor of variety. It is a great favorite in the Southern States and is grown very extensively at Norfolk, Virginia, and in Texas, for shipment to the Northern markets during January and February.

BLOOMSDALE DOUBLE EXTRA CURLED

- 50 Days. A superior sort, introduced by us in 1894, being very curly, very dark blue green, very hardy, so short stemmed that it rests practically on the ground, 9 to 11 inches broad, spreading and far denser in foliage than any other sort. Plants broader than a bushel basket and seem to hug the earth. More hardy than Dwarf Curled Scotch, passing unharmed through the severest Winter as far north as Philadelphia. 9 inches high. The Bloomsdale Kale is more hardy than the Scotch Kale, retaining its good color after cutting and throughout days of transportation, bringing more money when put upon the market because it is more attractive and appears to be fresher all the time because of its dark green color.

Pkt. 5c oz. 20c ½ lb. 55c lb. $1.50

Blue Kale—50 Days. This is renamed Bloomsdale Kale raised in Europe. Not equal to the strain we raise on Bloomsdale Farm under our own supervision.

Pkt. 5c oz. 15c ½ lb. 35c lb. 90c

Dwarf Curled Scotch or Norfolk—55 Days. A very favorite sort for garnishing. Sometimes called Dark Green Moss Curled. Foliage dark green, very finely curled. An excellent variety of spreading habit, short stalk. 14 to 16 inches in height.

Pkt. 5c oz. 15c ½ lb. 30c lb. 90c

KOHL RABI

One Ounce of Seed Will Plant 100 Yards of Row. Plant Two Pounds per Acre. This plant, used both for table and for cattle feeding, is a Cabbage in which the cultural development has been directed to the stalk, not to leaf. The enlarged stems take the globular form of Turnips. They are in season June, July and August, or at periods when Turnips are not available. Try them when the balls are no larger than a silver dollar. They will be found very appetizing.

The Kohl Rabi is a turnip shape swelling of the stem, in the shape of a ball, the size of a large orange—this occurs near the surface of the earth—these balls when the size of an egg make a very excellent vegetable having the combined flavors of Cabbage and Turnips.

Green or White—Large Rooted—80 Days. 6 to 8 inches in diameter. A field variety for cattle, three times as large as the table sort.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

Purple Vienna—60 Days. The bulb of this variety is purple. Green leaves with purple stems. It should be cooked when not over two inches in diameter. In maturity it develops for use with the White Vienna. Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00

White Vienna—60 Days. Very choice stock. Short-leaved, bulb light green, very rapid in growth, early in maturity, fine in texture when eaten, not over two inches and symmetrical in form.

Pkt. 5c oz. 20c ½ lb. 60c lb. $2.00
LEEK

A Native of Switzerland. Two Ounces of Seed Will Sow 100 Yards of Row. Allow Four Pounds to the Acre. Breaks ground in 9 days. One inch high in 17 days under most favorable circumstances in greenhouse. Sow when the apple is in bloom and again in mid-summer. If for permanent position, sow in rows of 2 feet apart; if for transplanting, sow in close beds. To secure a full development, thin out the rows or plant the seedlings at 4 inches apart in the row. Before the danger of hard frost take up the plants and preserve in trenches the same as celery. Yield from about 100 to 150 bushels to the acre.

The Leek in common language may be said to be a cousin of the onion—in flavor it is quite similar. While the onion grows best on dry lands, the Leek flourishes where there is more moisture. The Seed is generally sown in a Seed bed and subsequently transplanted to a more permanent location. It is a strong feeder, frequently growing to twice the size of the largest onion. The edible portion is not the root but an extension upward of the stalk which is bleached like celery, sometimes growing to a length of twelve inches.

Large London or Flag—85 Days. Scotch or Broad Flag—an old standard variety, still the most popular, with recurved broad leaves. Listed by us over a hundred years ago.

Monstrous Carentan—85 Days. Very superior, large rooted, broad leaved. The largest type, very hardy. Similar to the larger Rouen. Stems sometimes 3 in. in diameter. Pkt. 5c oz. 25c ½ lb. 75c lb. $2.50

Musselburgh Giant—85 Days. A remarkably large and showy variety. Leaves broad, deep green, and flat. Very popular. Hardy edible stems, 6 to 8 ins. in length. Pkt. 5c oz. 25c ½ lb. 75c lb. $2.50

LETTUCE

Lettuce cultivated in Europe since 1662, origin before that unknown. Two Ounces of Seed Will Plant 100 Yards of Row. Plant Three Pounds to the Acre. Breaks ground in 8 days. One inch high in 11 days under most favorable circumstances in greenhouse. To have fine Lettuce in early Spring, sow in seed bed in the September preceding, protect the plants during the Winter in a box covered with glass or with litter. Early in the Spring transplant half into rich ground. The other half force to an earlier development under the sash. When ground can be worked, sow in a hot-bed and transplant, but Autumn-sown plants are best. For a later supply, sow in drills when the Cherry tree is in bloom; when up a few inches, thin out, leaving plants 10 to 12 inches apart.

CUTTING OR LOOSE-LEAVED Sorts

Black Seeded Simpson—50 Days. Black Seed. A standard loose-leaved American variety. Crisp, yellowish green leaves of large size, grows very quickly, of fine quality. The flavor is excellent; it is the most popular of all the loose-leaved sorts. Color of leaves a lighter yellow than White Seeded Simpson. Pkt. 5c oz. 15c ¼ lb. 35c lb. $1.15

Curled Simpson, White Seeded Simpson or Curled Silesian—50 Days. One of the best known and most popular of the Curled American varieties, of excellent quality. A quick growing, non-heading, crisp sort. Leaves light green, crumpled, very similar in appearance to Black Seeded Simpson, only a more golden yellow. Pkt. 5c oz. 15c ¼ lb. 35c lb. $1.15

Golden Curled—55 Days. White Seed. A golden-leaved sort, producing a medium head of rare excellence, leaves much fluted or curled on the edges, crisp, loose, long and pointed. When fully matured the leaves are light yellowish green and very attractive. Similar to Blond Blockhead. Pkt. 5c oz. 15c ¼ lb. 45c lb. $1.50

Black Seeded Simpson
QUALITY SEED AT A FAIR PRICE WILL PROVE CHEAPEST

Bronze Curled or Chartier—55 Days. White Seed. A curly heading variety. Medium size. It has dark green, savoyed, curly leaves with exposed parts red.

Pkt. 5c oz. 15c ¼ lb. 45c lb. $1.50

Hanson or Nonpareil—65 Days. White Seed. One of the standard globular heading varieties of many years, leaves curly and crisp, with fringed edges, but not as fringed as Grand Rapids, folded so tightly as to make an attractive white interior, very crisp, medium size, light green leaves, heat resisting. Very popular.

Pkt. 5c oz. 15c ¼ lb. 35c lb. $1.15

Iceberg—60 Days. White Seed. A curled heading medium large, crisp, green variety, edges fringed and tinged with brown, a sort having outer leaves of strong ribs enclosing an exceedingly crisp and white interior.

Pkt. 5c oz. 15c ¼ lb. 40c lb. $1.25

May King—60 Days. White Seed. Producing a Cabbage-like head, round and solid, medium size, light green, slightly tinged with brown edges. Is an early, quick grower, extremely good for outdoor culture. A good shipper.

Pkt. 5c oz. 15c ¼ lb. 35c lb. $1.15

Mignonette—68 Days. Black Seed. A curly crisp small heading variety, leaves much crumpled, brown with dark greenish tinge, forms a small but compact hard head.

Pkt. 5c oz. 15c ¼ lb. 45c lb. $1.50

New York Green, Wonderful or Los Angeles—75 Days. White Seed. Sometimes erroneously called Iceberg. Possibly the most sought after Lettuce in the market today; certainly the most talked about. Grown in California and Colorado by the thousands of acres. It is the crisp, hard Lettuce which is served so extensively on dining cars and in hotels and restaurants. It is a crisp, large heading variety, dark metallic green, slightly curled on the edges, producing the most solid or compact head of any Lettuce in use.

Pkt. 5c oz. 15c ¼ lb. 45c lb. $1.50

Lettuce—Continued

Grand Rapids—50 Days. Black Seed. One of the leading American non-heading varieties. Curled, crisp, light green, wavy leaves, very much fringed, curly, cultivated extensively in the West under glass. Very tender leaves and of fine quality. Similar to Boston Curled. It is difficult to germinate and planters often condemn the Seed as being unvital when it really has a germinative force of 90 to 95 percent. Pkt. 6c oz. 15c ¼ lb. 40c lb. $1.25

Prize Head or American Gathering—50 Days. White Seed. A variety used very extensively in the United States. A curly, non-heading, crisp sort, has the general appearance of bronze all over. The inside leaves are emerald green. A very rapid grower.

Pkt. 6c oz. 15c ¼ lb. 35c lb. $1.15

Heading Varieties

Big Boston, Landreth's Extra Select—70 Days. White Seed. Heads creamy white whether grown in open garden or under glass. Very large, slightly tinged with reddish brown, solid and uniform. It has a high reputation everywhere, but especially in the trucking sections of Texas and Florida. One of the most generally used varieties. We advise all to plant this excellent strain of Big Boston.

Pkt. 5c oz. 20c ¼ lb. 60c lb. $2.00

Big Boston—70 Days. A white seeded cabbage lettuce, generally known in Europe as "Trocadero Cabbage." A reliable, popular and uniform header. Finely shaped, globular, medium light green with a slight tinge of bronze on the margin of the outer edge. Leaves smooth, practically no blisters, very hardy. An excellent shipper.

Pkt. 5c oz. 15c ¼ lb. 40c lb. $1.20

White Big Boston—70 Days. This white seeded variety resembles Big Boston in appearance except that its outer leaves do not turn red and are smoother than most varieties. We consider this strain superior to Big Boston and just as early. It is as productive as the regular Big Boston and is an exceptionally fine lettuce.

Pkt. 5c oz. 15c ¼ lb. 45c lb. $1.50
LETTUCE—Continued

New York No. 12—73 Days. An early improved strain of New York for Spring and Summer. It is a well bred selection of this famous lettuce, being lighter in color and more desirable for general planting than any other stock of New York. This strain does better on the Atlantic Coast than other strains of New York. Pkt. 5c oz. 20c \(\frac{1}{2}\) lb. 55c lb. $1.75

COS or ROMAINE LETTUCE

Cos originated on the Island of Cos near Malta, in the Mediterranean Sea. Both varieties were listed by us over 100 years ago.

Green Cos—65 Days. White Seed. Americans familiar with European travel have been delighted with the flavor of the long, spoon-shaped, narrow leaved Lettuce served everywhere and termed Romaine at the hotels, but upon their return home they have not found the Romaine in the American markets. Yet, if they have home gardens, they can grow it themselves to as perfect a condition as observed abroad. Same as Paris White Cos except leaves are dark green.

Pkt. 5c oz. 15c \(\frac{1}{2}\) lb. 40c lb. $1.25

Paris White Cos or Trianon—65 Days. White Seed. This variety, maturing for table in nine weeks from germination, should be found in every vegetable garden as it is a thoroughly reliable Lettuce. A strong grower and very productive with long, shell-shaped, light green leaves of most excellent quality. It is a self-folder, but when the plant is over half grown, it is best tied up with a soft string or a wisp of grass that the inner leaves may be blanched perfectly white, in which condition they are more crisp and decidedly more palatable than varieties of a Cabbage-heading habit. It is a mystery why it does not displace them, especially as a given amount of ground will produce more than twice the amount of edible leaves than can possibly be obtained from any round-head. Pkt. 5c oz. 15c \(\frac{1}{2}\) lb. 40c lb. $1.25

There are a number of Cos Lettuces; none superior to the White and Green.

MUSTARD

Of European Origin. Four Ounces of Seed Will Sow 100 Yards of Row. Four Pounds Will Sow an Acre. Breaks ground in 5 days. One inch high in 8 days under most favorable circumstances in greenhouse. In the Spring, when the Pear tree is in bloom or as soon as the ground can be worked, drill in rows 18 inches apart. To have a succession the sowings should be made every two or three weeks till October. Cut young; when old the flavor is strong.

BLOOMSDALE LARGE-LEAVED—35 Days. Producing, when fully grown, immense leaves which are as long and as broad as Tobacco. These same leaves when size of a man's hand are very tender and palatable as a salad. The leaves when twice that size we recommend for boiling as Spinach. This plant should have a place in every garden. An immense amount of edible and garnishing material can be raised in a very limited space.

Pkt. 5c oz. 10c \(\frac{1}{2}\) lb. 20c lb. 55c

Chinese Broad Leaf or Elephant’s Ear—45 Days. The mother variety from which Bloomsdale Large-leaved was selected and bred. Largely planted in all places where Mustard is used.

Pkt. 5c oz. 10c \(\frac{1}{2}\) lb. 20c lb. 55c

Florida Broad Leaf—43 Days. Leaves exceptionally large, slightly crumpled and thick. More of a yellowish color than Chinese Broad Leaf. Thick, white midrib. A quick growing variety becoming more popular every day.

Pkt. 5c oz. 10c \(\frac{1}{2}\) lb. 20c lb. 55c

Salammber or Black Seeded Tennis Ball—66 Days. Black Seeds, forming a large size, light green compact head with a white heart, very tender and crisp, extremely slow to run to Seed, stands heat. One of the most popular American varieties. The sun cannot be too hot for Salamander as it is one of the best, if not the best, heat resisting Lettuces in the market today.

Pkt. 5c oz. 15c \(\frac{1}{2}\) lb. 35c lb. $1.15

OSTRICH PLUME—40 Days. This sort was grown, named and introduced over fifty years ago by the Landreths and is recommended as the best Mustard on the market today but not equal to Ostrich Plume. Much more in demand and more productive seeder than the Ostrich Plume.

Pkt. 5c oz. 10c \(\frac{1}{2}\) lb. 20c lb. 55c

Giant Southern Curled or Creole—35 Days. Leaves large, yellowish green, much crumpled on the edges and very popular. The most popular Mustard on the market today but not equal to Ostrich Plume. Dark green, long plume-like leaves are very distinct and borne in profusion. It is a very shy seeder, therefore the seed is more expensive than other sorts.

Pkt. 5c oz. 10c \(\frac{1}{2}\) lb. 20c lb. 60c
**MUSTARD—Continued**

White or Yellow—30 Days. Seeds white and larger than the Brown, similar in habit to Brown, shoots to seed early. This blended with Brown is what is used to make Commercial Mustard, used on the table.

Pkt. 5c oz. 10c $\frac{1}{2}$ lb. 20c lb. 50c

**MUSTARD SPINACH OR TENDERGREEN—28 Days.** Something new in greens of Oriental origin. This vegetable, as its name implies, is a mild Mustard with a distinct Spinach flavor. It is a very rapid grower. Slow to shoot to seed. The first cutting of plants four or five inches long can be made in three or four weeks. It should first be planted in the Spring when greens are most in demand. It withstands heat wonderfully. Plantings made in July make an excellent crop.

Pkt. 5c oz. 10c $\frac{1}{2}$ lb. 20c lb. 60c

**Ostrich Plume Mustard**

**MUSKMELON or CANTALOUPE**

Cantaloupe is believed to have first come from Africa and was cultivated in the Roman Empire. Three Ozs. of Seed Will Plant 100 Yds. of Row. Plant Three Lbs. to the Acre. Break ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse. Cantaloupes, or Citrons, as they are termed in New Jersey, do well upon sod ground or upon land prepared for planting by plowing down a crop of Winter Wheat, or Winter Rye, the sod or straw aerating or keeping loose the soil; thrives best on sandy soil. No plant is more influenced by the conditions of its growth.

The seed should be planted after corn seeding time or shortly after the apple is in bloom, the hills about 4\frac{1}{2} feet in every direction. Two shovelfuls of well-rotted stable manure trampled into each hill and covered with earth will greatly aid growth. Cantaloupe vines are often destroyed by lice if not properly sprayed.

For a partial protection spray the leaves frequently with Bordeaux Mixture. Cantaloupe vines frequently are blighted by early morning fogs, the leaves appearing afterwards as if a flame of fire had passed over the fields.

**GREEN FLESHED VARIETIES**

**Extra Early Hackensack—88 Days.** This Melon is 6 days earlier than the large old-fashioned Hackensack, deeply ribbed, coarse netted, flesh thick, of excellent flavor, flesh and skin green, slightly tinged with yellow. Nearly round, somewhat flattened in shape. One of the most popular of the old standbys.

Pkt. 5c oz. 10c $\frac{1}{2}$ lb. 35c lb. $1.10$

**Honey Dew—Green Flesh—110 Days.** This is a melon known in France as Antipes. Fruits round to oval with smooth, very nearly white skin. Flesh thick, light emerald green when first picked but creamy yellow after stored several days. It is best five or ten days after picking, when the flesh becomes creamy yellow. If picked when slightly green and put in a cool place it will keep from five to six weeks. This is the very popular melon served in the late autumn after all other Cantaloupes are over. Best grown in Colorado and California where it thrives in a long season which is required to mature good fruits.

Pkt. 5c oz. 15c $\frac{1}{4}$ lb. 40c lb. $1.25$

**Jenny Lind Small—86 Days.** A small early green fleshed variety of unsurpassed flavor, much flattened at the poles. We believe this is still the best flavored of all Melons. Very little netting, shallow ribs, a large size button at the blossom end.

Pkt. 5c oz. 15c $\frac{1}{4}$ lb. 35c lb. $1.10$

**Knight's Early, Sweet Air or Maryland—85 Days.** Green fleshed, of excellent flavor, by many considered superior to the Rocky Ford. Some general shape, but small, sometimes a perfect globe, completely netted, but not so well netted as Rocky Ford, light ribs, a good shipper, very popular with the large grower when it was called Jr. Rocky Ford.

Pkt. 5c oz. 16c $\frac{1}{2}$ lb. 35c lb. $1.15$

**Large Hackensack or Turk's Cap—94 Days.** Large fruit, flattened at the poles, flesh green, a great favorite with the family gardeners. Its large size, however, is against it with Market Gardeners. It is the best flavored of the very large green Melons, very deeply ribbed and densely covered with a coarse netting. Weight about 8 pounds.

Pkt. 5c oz. 15c $\frac{1}{4}$ lb. 35c lb. $1.10$

**Rocky Ford—Fine Selected—95 Days.** Flesh light green with gold tinge in center. Fruit nearly round, small cavity. Netted with gray all over and free from ribs. This is the greatest favorite in the market today, is more extensively grown than all the other Melons in existence. It varies in type and thickness of skin, according to selection. Is a medium early sort with practically no ribs and intense netting.

Pkt. 5c oz. 15c $\frac{1}{4}$ lb. 35c lb. $1.10$

**Rocky Ford—Landreths' Double Extra Select—95 Days.** This seed is saved from hand-selected fruit and is superior to the ordinary field-picked strain of Rocky Ford. Flesh light green and of a delicate spicy flavor. Melons nearly round, very small cavity, uniform in size and shape, netted all over with a fine gray tracery, no ribs discernible. Our strain of Rocky Ford seed cannot be excelled by any strain in the market, no matter what price is asked. The Landreths' Double Extra Select Rocky Ford is known throughout all the Melon districts.

Pkt. 5c oz. 20c $\frac{1}{2}$ lb. 60c lb. $2.00$
CANTALOUPES—Continued

YELLOW FLESHED CANTALOUPES

Banana—92 Days. A melon growing 18 inches long, 4 to 5 inches thick, weighing about 7 pounds, and distinctly tapering at each end. Lemon colored skin, pink flesh, of very fine texture and delicate flavor. To all who enjoy something out of the ordinary we strongly recommend the trying of this variety as a novelty.

Pkt. 6c oz. 15c ½ lb. 40c lb. $1.25

Defender, Burrells Gem or Ordway Pink—86 Days. A celebrated orange fleshed Melon, one of the best of the Rocky Ford types. Fruit medium size, oval, showing a slight rib and covered with a grayish netting, the flesh is a deep orange yellow. Small cavity.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.10

Edward’s Perfecto—90 Days. This is a salmon fleshed, round, well netted without ribs, very small cavity variety. Excellent for shipping and no doubt will be used very shortly for long distance shipping. Delicious sweet flavor.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.10

Emerald Gem—86 Days. A small, very early Melon, form globular, flattened at the poles, slightly ribbed, netted, orange flesh, deep emerald green line under the skin. Very sweet and luscious. One of the best for the garden.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.10

Fordhook or Yellow Flesh Jenny Lind—86 Days. A thick orange flesh, small cavity melon, well ribbed and heavily netted. Flat at poles, resembles the Jenny Lind in many respects, except in color. Especially popular in New Jersey on account of its very appetizing flavor. Weight about 1½ pounds.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.10

Hale’s Best No. 36—85 Days. A very early melon. Salmon flesh of exceptional thickness, oval in shape with heavy netting and prominent ribs. The best strain of this valuable variety. 8 to 10 days earlier than Rocky Ford. Planted in many sections, its chief value being its remarkable earliness. The earliest melon shipped from California.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Hearts of Gold or Hoo Doo—90 Days. An orange fleshed, medium sized, almost round shaped, good shipping variety. Fine netting extending over the whole surface, a fine highly colored melon of good shipping qualities. Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Hearts of Gold No. 10—90 Days. This is a very superior strain of our own selection from the famous Hearts of Gold. The cavity is very small with a deep salmon flesh, well netted and slightly ribbed. It is a very fine variety.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Osage or Miller’s Cream—92 Days. Fruit medium size, oval, slightly ribbed, small cavity, dark green in color, covered more or less with a shallow netting, flesh deep salmon color and very thick. Very valuable for home consumption.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Pollock No. 10-26—95 Days. The fruit is quite round, heavily netted, no ribs, small cavity, excellent flavor, identical to Rocky Ford except the flesh is salmon tinted. This variety has a reputation of being the best rust-resistant of any Melon. We cannot praise our stocks of this too highly.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Surprise or Tip Top—95 Days. Very productive, medium size, fruit nearly round although sometimes a little flat, color grayish green, deep ribbed and very little if any netting. Flesh “deep salmon,” sweet and of such exquisite flavor that it has put this sort in high favor with the melon specialist, not only in northern New York State, but wherever quality is of prime importance.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.15

Surprise, Bender’s—95 Days. This is larger than ordinary Surprise, ribbed slightly, hard and netted. Its coarse netting, heavy rind gives it good shipping qualities. The shape is similar to Surprise or Tip Top.

Pkt. 6c oz. 15c ½ lb. 35c lb. $1.50
WATERMELON

Native of Central Africa. Sow in Hills 8 Feet Apart in Each Direction. 3 Ounces Will Plant 100 Hills; Use 4 Pounds Per Acre. Breaks ground in 8 days. One inch high in 11 days under most favorable circumstances in greenhouse. Watermelons do best in sandy soil on sod, or well prepared ground by plowing down a crop of Winter Wheat or Winter Rye, the sod or grain aerating or keeping loose the soil. When the walnut tree is in bloom, the seed should be planted in hills at 8 feet apart in each direction. Two large shovelfuls of well-rotted stable manure dug and trampled into each hill and covered with earth will help wonderfully.

The planter should be prepared to use 4 pounds of seed per acre if necessary, reserving some for replanting in case of destruction to the plants by insect depredations or beating rains. One vine alone to the hill should be allowed to retain perfection with 680 hills to the acre, which should produce 2040 first-class Melons. Much of the Melon seed offered throughout the country is the product of immature and deformed melons remaining in the fields after all the choice fruit has been marketed. Landreths' seed is from mature melons grown especially for seed and not gathered from fields after all the best Melons have been marketed.

Augusta Rattlesnake, Gypsy or Georgia—85 Days. Seed creamy white with black tips. Here we have an old Southern standby, an excellent shipper and ready seller. A long, large, bright, yellowish green melon with irregular stripes of very dark green, the ground color marbled with a medium green. Flesh bright scarlet. 18 x 12 inches.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Dixie Queen—85 Days. Seed very small, white, a particularly shy seeder, a vigorous productive vine, rind is tough, making it a fairly good shipper. This recent introduction is considered by many to be finer in quality and flavor than any other watermelon. Color of melons very light green, finely veined with green, with darker green irregular striping. Shape round, slightly elongated from stem to bud. Flesh solid, brilliant red to within half an inch of outer rind, quality unexcelled, fine sugary flavor. Must be well fertilized to produce perfect melons as it is a very prolific bearer. Some specimens weigh over 60 pounds. Average weight 30 to 40 pounds. A few days earlier than Stone Mountain.

Pkt. 5c oz. 16c ½ lb. 46c lb. $1.50

Excel—100 Days. Seed black and brown. This is an early and prolific bearer, color of rind deep green with a mottled, darker green stripe. Flesh deep red, solid and crystalline, and a fine flavor, ripened well up to the rind. A most excellent shipping melon. Average weight from 30 to 50 pounds, often 60 pounds under favorable conditions. Large, long and a good keeper. 20 x 12 inches.

Pkt. 5c oz. 10c ½ lb. 25c lb. 80c

Excel White Seeded—100 Days. Same as the dark in every respect except color of seed.

Pkt. 5c oz. 10c ½ lb. 25c lb. 70c

Florida Favorite—85 Days. A vigorous, very productive vine, producing large, long fruits which are dark green in color, with irregular mottled stripings of a lighter shade. Flesh very sweet, deep red in color and of excellent quality. Rind is thin but stands up well. Seed white. 16 x 10 inches.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c
CAREFUL TESTS IN LANDRETHS’ TRIAL GROUNDS ARE YOUR INSURANCE

Dixie Queen (For Description See Page 45)

WATERMELON—Continued

Halbert Honey—88 Days. Seed creamy white with brown tips. Similar to Kleckley Sweet, about 20 inches long, oblong, form almost equally round at each end, rind dark green, sweet and unsurpassed. A fine long cylindrical Melon for home use. Flesh bright red. 20 x 12 inches.

Pkt. 5c oz. 10c ¼ lb. 25c lb. 75c

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Kleckley Sweet or Monte Cristo—85 Days. Seed creamy white. One of the most sought after melons. No one has a superior stock of this, very valuable melon, than the stock we are offering for your approval. Fruit oblong, about 20 inches in length, rind thin, and always a very dark green, early to ripen, flesh scarlet, sugary and crisp. This melon, by reason of its rind, is not as well adapted for shipping as for home consumption, yet it is exceedingly tender, of an excellent flavor and texture. 20 x 12 inches.

Pkt. 5c oz. 10c ½ lb. 25c lb. 80c

LANDRETHS’ LONG LIGHT Icing—85 Days. Creamy white, small seeds, a good cropper, heavy and attractive, of very desirable quality and flavor. Shape long, oval, tapering from blossom end, skin light green, flesh scarlet, extremely sugary. Undoubtedly one of the best melons on the market today for the family garden.

Pkt. 5c oz. 10c ½ lb. 25c lb. 80c

Peerless or Ice Cream—85 Days. Seed white. Not a good shipper, but one of the best for home gardens, fruit long, outside rind light green, finely netted, flesh very tender. 12 x 10 inches.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Round Light Green Rind Icing—85 Days. Seed creamy white. One of the best melons on the market and a great favorite in some sections for its excellent quality; always of a good flavor, of a very thin rind, consequently not a good shipper. Fruit nearly round, greenish-white, marbled or dotted, with light green veins. Fine for family gardens.

Pkt. 5c oz. 10c ¼ lb. 25c lb. 75c

Stone Mountain—90 Days. Seed white with black or dark brown marking, sometimes black predominating. Soil makes a great difference in marking. One of the largest melons in cultivation, is early for its large size, almost round, dark green rind, with a slightly irregular darker veining, slightly flattened on the ends; solid scarlet flesh, is a shy seeder. This is a fine melon for home and nearby trade—sweet, tender, juicy, too large and tender for distant shipping. For the last few years it has been almost an impossibility to secure enough seed of this very popular variety. Undoubtedly the most popular Melon on the market, twice as much seed of this Melon is being used than any other variety.

Pkt. 5c oz. 10c ¼ lb. 30c lb. $1.00

Round Dark Green Rind Icing—85 Days. Seeds small and creamy white. The same as the Light Green Rind Icing in every respect, except color of rind. 14 x 12 inches.

Pkt. 5c oz. 10c ¼ lb. 25c lb. 75c
WATERMELON—Continued

**Tom Watson—90 Days.** Brown, white, spotted seed. An even, oblong, dark green melon, finely marked all over with a darker green tracery than Kleckley Sweet, and slightly longer. Fine variety, flesh deep red, fine flavor, no core, often weighing 50 to 60 pounds. A popular Watermelon for shipping purposes. Pkt. 6c, oz. 10c \( \frac{1}{4} \) lb. 25c lb. 75c

**Wonder or Improved Kleckley Sweet—85 Days.** In color it is like Kleckley Sweet. In shape, it is long. It weighs sometimes up to 50 pounds. The color of the seed is white. The texture is fine, flavor is very superior. In reality it is an improved Kleckley Sweet. Excellent for Home and Market Garden. Not adapted to shipping long distances as its skin is too tender. Flesh deep red. 17 x 10 inches.

Pkt. 6c oz. 10c \( \frac{1}{4} \) lb. 25c lb. 80c

**Preserving Citron—Red Seed—90 Days.** Seeds red and small. A round, small, light and dark green striped melon. Meat a greenish white, used for preserving only. Late to mature, very hardy, and a long keeper, with a very tough rind.

Pkt. 5c oz. 15c \( \frac{1}{4} \) lb. 30c lb. 90

OKRA or GUMBO

Native of North Africa. Sow Six Ounces of Seed to 100 Yards of Row. Ten Pounds to the Acre. Sixty Days from Planting to Maturity. Breaks ground in 7 days. One inch high in 10 days under most favorable circumstances in greenhouse.

Plant the Seed when the apple tree is in bloom, or slightly before, in hills or drills. If in hills, plant 5 or 6 seeds, 2 feet apart and thin out to two or three plants in each hill, or in drills, 3 feet apart and thin out the plants to 8 or 10 inches between the plants. The seeds are liable to rot if sown early in cold or wet ground and should be put in thickly to secure the requisite quantity of plants. Very rich ground is demanded by this vegetable. It is principally used in the South in soup, but it is excellent when stewed. Gardeners in the North make a great mistake in not planting more of this delicious vegetable. As easily cultivated as corn and produces a large crop. Tomato or vegetable soup including Okra or Gumbo is most delicious and is gaining in popularity.

**LANDRETHS’ DWARF STALKED LONG GREEN POD—50 Days.** Although growing only 3 feet high this is a very strong, vigorous, very productive grower, sending out many branches. Leaves and pods are very dark green. Pods 5 to 7 inches long, slender, corrugated, very tender and of excellent quality.

Pkt. 5c oz. 10c \( \frac{1}{4} \) lb. 20c lb. 55c

**Long White Velvet Pod—60 Days.** Height of stalk about 3 \( \frac{1}{2} \) feet, pods greenish white, unusually long, perfectly smooth, often 10 inches long, very slim. Exceedingly productive.

Pkt. 5c oz. 10c \( \frac{1}{4} \) lb. 20c lb. 55c
BIRDSEYE VIEW OF A SECTION OF OUR BLOOMSDALE FARM. NOTE THE RAIL SIDING TO MAIN TRACK OF THE NEW YORK DIVISION, PENNSYLVANIA RAILROAD, AND OTHER SHIPPING FACILITIES.
Native of Western Asia in very remote ages. Breaks ground in 9 days. One inch high in 13 days under most favorable circumstances in greenhouse. One-quarter pound of seed will sow a row 100 yards, and 5 pounds will sow an acre, to produce big Onions. 60 to 80 pounds, depending upon vitality, should be sown per acre to produce Sets.

IMPORTED VARIETIES

Bermuda Island Red—90 Days. The distinctive name of this variety is Red, but it is not altogether a red bulb, as it is dished with red on a straw color. Very early, mild, sweet and flat, resembling the White Bermuda in every way but color.

Pkt. 5c oz. 25c ¼ lb. 75c lb. $2.50

Bermuda Island White or Yellow—88 Days. This flat, mild flavored variety is not pure white, but light straw colored. It is possibly two days earlier than Red Bermuda. The most popular of the three Bermuda varieties. Planted very extensively in Texas and Florida. Not a good keeper.

Pkt. 5c oz. 25c ¼ lb. 75c lb. $2.50

CRYSTAL WAX—86 Days. Introduced and named by Landreth in 1888. A half globe sort, absolutely waxy skin, pure white, extremely mild flavor, the best of its type. The earliest of the White Bermuda types, of great reputation in the South. It is a very attractive Onion, both as a set and for the table. Pkt. 5c oz. 30c ½ lb. 90c lb. $3.00

RED VARIETIES

Southport Red Globe—130 Days. A very desirable main crop, purplish red, globe shape with an oblong tendency, with smooth glossy surface, a large producer and an excellent shipper and keeper. The most showy because brightest color. Very salable in the market. Grown extensively for large Onions.

Pkt. 5c oz. 30c ½ lb. 90c lb. $2.90

Red Wethersfield—110 Days. The standard red variety listed by us for over 100 years, popular in the East, where large crops have been grown for years for shipment. The bulbs are broad and flat. The flesh is a light purplish red. Very productive and an excellent keeper. The seed of this Onion is used very extensively for growing Onion Sets as well as large Onions.

Pkt. 5c oz. 25c ¼ lb. 70c lb. $2.25

WHITE VARIETIES

BLOOMSDALE EXTRA EARLY PEARL or White Queen—90 Days. In many respects the most remarkable Onion under cultivation, growing with the rapidity of a Summer radish. Twelve weeks from sowing to maturity. The bulbs are pearly white, waxy, transparent skin, form flat, broad, with a slight corrugation around the edges. Flavor mild, all astringent qualities eliminated. Can be eaten raw with almost the freedom of an apple. The keeping qualities of the matured Onions are very good, the sets sprout very early, and should be planted not later than October.

Pkt. 5c oz. 30c ¼ lb. 90c lb. $3.00

Silver Skin or White Portugal—100 Days. A mild, pleasant flavored, white flat variety, admirable for family use. Used almost exclusively to produce White Sets. Not so good a keeper as the Yellow or Red varieties. Bulb medium size, mild flavor, white skin. Is about 8 to 10 days earlier than White Globe and matures where the White Globe does not. The small bulbs are nearly round, but flatten as they mature. Listed by us first in our 1832 Catalog.

Pkt. 5c oz. 25c ¼ lb. 75c lb. $2.50

Southport White Globe—110 Days. A showy, mild flavored, large pure White Globe variety. Very solid, producing a good keeper and possibly the best for setting of all White sorts, unsurpassed in uniformity, absolutely pure white. Used extensively in all sections where Onions thrive.

Pkt. 5c oz. 30c ¼ lb. $1.00 lb. $3.25

YELLOW VARIETIES

Ebenezer or Japanese—100 Days. An old yellow skinned variety lately reintroduced, bulbs deep flat of medium size, dark pure yellow, very firm and hard, popular at the present time for growing sets. Its other merits are that of a most vigorous grower, a heavy yielder, far greater than from Stiasburg and astonishingly good, with long keeping qualities. It is the best yellow for growing sets.

Pkt. 5c oz. 25c ¼ lb. 75c lb. $2.50

Prize Taker—100 Days. Mammoth Yellow Globe derived from the huge Spanish Onion, exhibited for years in the markets in Autumn. Very early, does well in light sandy soil. Very large producer and fifteen days earlier than the celebrated Southport Yellow Globe. A variety which will succeed under conditions where other sorts fail; consequently, highly recommended for planting everywhere. This is a most valuable quality. It makes a solid, slightly oval, round bulb. It is a good keeper, twice the size of the Globe Danvers. Produces much better Onions from seed in Pennsylvania, Maryland, Delaware and New Jersey, than any of the Southports.

Pkt. 5c oz. 25c ¼ lb. 70c lb. $2.25
ONION—Continued

Prize Taker
(For Description See Page 50)

Southport Yellow Globe—115 Days. A standard American variety. A very hardy and exceedingly productive yellow globe. Is more oval than the Yellow Globe Danvers, much larger, more solid and heavier. Mild in flavor and an excellent keeper. The most widely used seed to produce large yellow onions.

Pkt. 5c oz. 30c ½ lb. 90c lb. $3.00

Yellow Globe Danvers—110 Days. An oval-shaped, straw-colored, long-keeping variety. The bulbs are roundish, of good thickness, and keep extremely well. A popular Onion in every section.

Pkt. 5c oz. 30c ½ lb. 85c lb. $2.75

Large Yellow Strasburg or Flat Danvers—110 Days. This valuable, widely cultivated yellow variety is one of the most popular varieties for producing yellow sets and has been for over 100 years, hard to excell in this respect. The bulbs are large, yellow, flat, uniform in size. It ripens early and is altogether a good strain of seed for producing handsome, long keeping sets.

Pkt. 5c oz. 30c ½ lb. 85c lb. $2.75

Pkt. 5c oz. 25c ½ lb. 75c lb. $2.50

ONION SETS

Prices Subject to Fluctuation. Three Quarts of Sets will plant 100 Yards of Row. Plant Ten to Fifteen Bushels to the Acre, According to Size

Our Onion Seed Grown at Teneriffe, Canary Island

Southport Yellow Globe
PARSLEY

This vegetable is a Native of Sardinia. About Seventy Days from Sowing to Cutting. Two Ounces of Seed will plant 100 Yards of Row. Eight Pounds to the Acre. Breaks ground in 15 days. One inch high in 20 days under most favorable circumstances in greenhouse. The seed does not germinate under two or three weeks. The drilling should take place as soon as the soil can be worked or when the Cherry tree is in bloom, and may be continued until Autumn. If for horse culture, the rows should be 2½ feet apart; if for hand culture, the rows should be 18 inches apart. Used especially for garnishing and flavoring.

Champion Moss Curled or Triple Curled—70 Days. This is a very vigorous growing, compact, very productive sort. The leaves are very dark green in color, very finely cut and so thickly curled that a plant resembles a bunch of moss. The most desirable sort for garnishing and decorating. The best Parsley for all purposes.

Fine Curled or Double—70 Days. The leaves of this sort are finely cut and well curled. It is desirable for flavoring soups and stews, garnishing, and drying.

Paramount—An All-America Trial Selection of a triple curled uniform dark green foliage. Very choice quality likely to supersede the older varieties.

Hamburg Rooted—90 Days. This variety is raised for its roots. Although the leaves are very similar to the Plain Parsley, they are not recommended for garnishing, owing to the long period of growth before coming to maturity. Listed by us over a hundred years ago. The roots can be used for flavoring soup and stews when fresh, or can be stored like other roots and used for Winter.

Plain or Single—60 Days. Used as a pot herb. Leaves dark, flat and plain. Not curled but deeply cut, resembling Hamburg in appearance. More aromatic than the Curled varieties. Listed by us over a hundred years.

PARSNIP

Native of Europe and well-known during the Roman Empire. Three Ounces of Seed will Sow 100 Yards of Row. Sow Four Pounds to the Acre. Breaks ground in 15 days. One inch high in 22 days under most favorable circumstances in greenhouse.

BLOOMSDALE—90 Days. The Bloomsdale is the best-bred, most handsome Parsnip to be found; it is half-long, wedge-shape, hollow-crowned and very broad at the shoulders, easily taken out of the ground. Smooth skinned, not wrinkled. Most desirable for garden culture, and well known as a culinary vegetable, doing best on rich sandy soil.

The seed is slow to sprout and is never good over two years.

Hollow-Crowned, Student, Sugar or Cup, Guernsey—95 Days. An old variety. 14 to 16 inches long. Hollow crowned. 3 inches thick. Smooth tapering root.
Peas probably originated in Asia from the Caucasus to Persia. Four Pounds of Seed Will Sow 100 Yards of Row. 120 to 180 Pounds Will Sow an Acre, depending whether in rows or broadcast. Breaks ground in 7 days. One inch high in 10 days under most favorable circumstances in greenhouse.

Peas are among the first seeds that can be sown at close of Winter. The round seeded sorts, as they are harder, frequently are sown before sharp frosts are fully over. The drilling of Peas may be safely commenced before the Peach is in bloom or as soon as the land can be plowed, and continued at intervals up to within seventy days of Autumn frost, for the early kinds, or eighty days for the intermediate varieties, or eighty-five days for the late sorts. Late-sown Peas are never as productive as those sown in the Spring, and often are subject to mildew. Wrinkled varieties are most susceptible to cold or wet weather; therefore, cannot be planted as early. Landreths' Extra Early and Ameer will be found to be the best for August and September sowings, because of their early ripening habit and their ability to resist mildew. The dwarf varieties may be drilled at 30 inch rows if cultivated by horse power, or 20 inches if to be hoed by hand. The varieties of medium length should be drilled no closer than 3 feet, and the tall growing sorts at 4 feet apart. The number of Peas in a row may vary from 24 to the foot, in the case of the very dwarf kinds, and 18 to the foot of the medium tall varieties, and 15 to the foot of the very tall kinds. Yield of Green Pods is 100 to 300 bushels per acre, depending on cultivation and weather conditions.

This Company believes that the best smooth Peas for early planting are Landreths' Extra Early, Ameer, Alaska, Laxton's Superb. For later planting, World's Record, Thomas Laxton, and Laxtonian types. For late planting Alderman, and Prince Edward, which is the best type of late Telephone. No garden should be without Peas. We ourselves, prefer Landreths' Extra Earlys, Alaskas, Ameer, or Bountiful to any Peas we can plant in our home garden, when picked early. We think they are the best flavored, and do not produce hulls like the skin of a grape as do all the monstrous Peas, and they are much more palatable.

FIRST EARLIES AND EARLIES

Alaska or Earliest of All—66 Days. A green seeded, smooth, extra early, vine 30 to 36 inches tall. Slender light green foliage, pods, 2 1/2 to 3 inches long, blunt, containing 5 to 8 blue-green, small, slightly pitted to smooth seeds. One of the best extra early Peas in the market, a great favorite with canners, because a good stock of this variety matures all its pods at once.

Gradus
PEAS—Continued

LANDRETHS’ EXTRA EARLY—56 Days. A critical gardener wants the best strain as respects earliness, size of pods, flavor, uniformity of ripening, vigor, and habit of the plant. All these desirable qualities can be obtained in the strain sold as Landreths’ Extra Early. The best very early table Pea on the market. This type will produce Peas fit for table in 56 days, according to soil and climatic conditions of the season of their growth. This Pea was introduced and named by the Landreths in 1823, and is the only Pea then used which has stood the test for over 100 years. Height of vine 2½ to 3 feet. Pods 2½ to 3½ inches long, blunt, containing 5, 6, or 7 medium sized smooth to Pitted peas of excellent quality. No variety of Peas has ever exceeded the Landreths’ Extra Early in flavor.

½ lb. 16c lb. 25c 5 lbs. $1.05 10 lbs. $1.96

Laxton’s Superb or Early Bird—60 Days. Very hardy, productive, the earliest, large podded variety, 18 to 20 inches tall, which can be planted very early in the Spring as the Peas are almost smooth, round and green and will withstand the cold, wet weather. A superior quality for an early, large podded Pea. Pods single, dark green, 4 inches in length and pointed as is Laxtonian. Contains 9 or 10 Peas, growing more in favor as it becomes known.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.96

Laxtonian—62 Days. Height of vine about 18 inches, foliage dark green. Pods dark green, single and broad, slightly curved pointed, about 4 inches long, resembling Telephone. This is the largest, handsomest podded, dark green, dwarf vine Pea that we know of, growing more in favor every year. Anyone who wishes a dwarf vine, large podded, dark green pod, will not go amiss by planting this variety.

½ lb. 16c lb. 25c 5 lbs. $1.05 10 lbs. $1.96

Laxtonian—One-Half Size

Little Marvel—64 Days. Seed large, green, wrinkled. Vine strong, dark green, vigorous, about 18 inches tall. Showy pods about 3 to 3½ inches long with a blunt end containing 7 or 8 Peas. A very fine, productive, dwarf, sturdy variety. Popular with the home gardener and in some sections planted largely by market gardeners.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Long Pod Alaska, Ameer or Bountiful—62 Days. Seed large, green, resembling Alaskas, only one-third larger. An extra early Pea of fine quality. Height of vine, about 30 to 36 inches. The Peas ripen uniformly, pods about 3 inches long, pointed, somewhat curved, of the Telephone type, containing 7 or 8 Peas. An excellent Pea for market as well as for home or kitchen garden, of very fine eating quality. No private garden should be without at least one sowing of this valuable variety.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Mammoth Potted Extra Early—58 Days. One of the earliest and most prolific of all the extra early Peas. It has given good results wherever grown. The vines reach a height of about 30 inches. They are very robust and bear an abundance of pods. The individual pods measure 2½ inches in length and they are well filled with large, rich, green peas of sweet and tasty flavor.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Nott’s Excelsior—60 Days. Seeds green, wrinkled, square at ends like American Wonder. Vines almost identical to the American Wonder except slightly taller. One of the best, early, dwarf, wrinkled sorts. Vines about 15 to 18 inches high, producing a good crop of well-filled blunt pods about 3 inches long, containing 5 to 8 very sweet Peas.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.96

Premium Gem—65 Days. Seed green, wrinkled, often flattened. An admirable, very productive second early. Height of vine, about 20 inches. Pods blunt, about 3 inches long, 5 to 7 Peas in a pod. Standard sort used in large quantities because it is a very popular reliable Pea for the private gardener.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.96

Pioneer—65 Days. When this variety was first introduced it differed from Laxtonian only in having a slightly lighter green pod, but at the present time the difference has been lost sight of and today both Peas are identical in every way. It is one of the largest green telephone shape podded varieties on the market.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Surprise or Eclipse—60 Days. An early maturing light green wrinkled Pea with dark green slender vines, 26 to 30 inches tall. Pods light colored, blunt, 2 to 3 inches long, containing 6 to 8 Peas, and borne singly. This variety is really a wrinkled Extra Early especially adapted to canning trade and at one time was a most popular variety and is now coming back into great favor.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95

Thomas Laxton—65 Days. Seed wrinkled, medium size, cream and green color. Height of vine about 3 feet. Vines darker green than Gradus. Length of pods, about 4 inches, containing 6 to 8 large tender Peas, more productive and vigorous than Gradus Pods, single, blunt or square ended, and light green. An early fine productive Pea for Market Gardeners or home use.

½ lb. 15c lb. 25c 5 lbs. $1.05 10 lbs. $1.95
PEAS—Continued

World's Record—56 Days. Seed wrinkled, large, cream and green color. Pods are pointed, about 4 inches long, and broad. An early type of the celebrated Gradus, very frequently used as an early Gradus. Height of vine 24 to 30 inches, light green. Fine showy single pods, with 7 or 8 Peas in each. Vines medium heavy. A wonderful, early Pea for market and home gardeners.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

SECOND EARLIES AND LATE

Admiral, Green Seed—70 Days. Dry seed, is deep green, small, wrinkled. Especially desirable for canners, as it retains its green color under all conditions. Pods blunt, straight, single, containing 6 or 7 small Peas. Resistant to fusarium wilt. A very productive dependable variety. Dark green slender vines, 36 to 40 inches tall.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Alderman—76 Days. Telephone type. Pods pointed, dark green, large, average about 5½ inches long, from 8 to 10 Peas to a pod. Dark green, coarse vines, very productive. Excellent sort for home or Market Garden.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Carter's Daisy or Dwarf Telephone—75 Days. Seed large, light green bluish tinge, wrinkled. Vines light yellowish green, about 20 inches high. So named because its vine, although very short, resembles very closely the Telephone, only lighter. Stems very thick and sturdy, broad leaves. Pods about 4½ inches long, of the Telephone type, and a yellowish-green.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Horsford Market Garden—74 Days. Height of vine about 36 inches. Pods double, blunt, medium size, about 2½ inches long, containing 6 or 7 dark green Peas. Small leaves with very dark green foliage. Very large producer of showy pods, producing pairs in great abundance. A canning variety.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Large White Marrowfat—80 Days. Dry seed, large, round, creamy white, with a white eye. Vines about 4½ feet high, of strong growing habits, pods single, blunt, about 3 inches long, containing 5 or 6 large Peas. Listed by us for over 100 years.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Perfection—70 Days. A green seeded, wrinkled variety. Really a great improvement on the old Advance. Height of vine about 36 inches. Upright, very vigorous in growth, and very popular with market gardeners and commercial canners. Pods double, about 3 inches long, blunt, borne at the top of the vine, containing 6 to 8 good flavored Peas.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Prince Edward—76 Days. The seed is large, wrinkled and green mixed with cream color. Vines coarse, dark green, 4 to 4½ feet tall. Resistant to Fusarium Wilt. Pods single, large, pointed, about 5 to 5½ inches long, containing 8 to 10 Peas of the best dark podded Telephone type, showy, exceedingly productive, in our opinion the best of the Telephone type on the market today for either kitchen or market gardeners to grow.

1/2 lb. 15¢ lb. 25¢ 5 lbs. $1.05 10 lbs. $1.95

Landreths' Peas are all raised from individual plant selection, and this is the only method by which good seed can be procured and maintained. Trained men carry on this work at our own trial grounds and growing stations located in the West.
PEAS—Continued

Stratagem Improved or Potlach—75 Days. Dry seed, blue-green, slightly pitted. Height of vine about 22 to 26 inches, deep green, very luxurious. Pods of Telephone type, single, about 4 inches long, containing 8 to 10 Peas. A great favorite with private gardeners because of its large, handsome pods, which are borne single and in pairs.

\[
\frac{1}{2} \text{ lb. } 15c \quad 25c \quad 5 \text{ lbs. } \$1.05 \quad 10 \text{ lbs. } \$1.95
\]

Sutton’s Excelsior—65 Days. Seed large, wrinkled, light green, flat. Height of vine about 18 inches, producing exceedingly dark, blunt, straight single pod, containing 6 or 7 large Peas. Very desirable for both private and market gardeners. A very fine variety. We do not think that this most desirable variety is planted often enough.

\[
\frac{1}{2} \text{ lb. } 15c \quad 25c \quad 5 \text{ lbs. } \$1.05 \quad 10 \text{ lbs. } \$1.95
\]

Telephone—Dark Podded—76 Days. The seed is large, wrinkled and creamy green color. Height of vine 4 to 4 1/2 feet, coarse. Pods single, about 5 inches long, dark green, pointed, straight. One of the best late, large podded Peas. Very popular with market gardeners as a late variety on account of its fine appearance and quality.

\[
\frac{1}{2} \text{ lb. } 15c \quad 25c \quad 5 \text{ lbs. } \$1.05 \quad 10 \text{ lbs. } \$1.95

EDIBLE PODS OR SUGAR PEAS

Dwarf Gray Seeded Purple Blossom—75 Days. Height of vine about 24 to 30 inches. Of the same habits as Dwarf White Sugar, only producing Peas of a gray mottled appearance and having purple blossoms as the name signifies. Very prolific bearer. The pods, double, light green, curved, are eaten like Snap Beans.

\[
\frac{1}{2} \text{ lb. } 15c \quad 25c \quad 5 \text{ lbs. } \$1.05 \quad 10 \text{ lbs. } \$1.95
\]

Dwarf Sugar White Blossom—75 Days. Dry seed is round, smooth and creamy white. Blossoms white. Height of vine about 24 to 30 inches. Very productive. Pods 2 inches in length, single and double, well filled with 6 or 7 Peas.

\[
\frac{1}{2} \text{ lb. } 20c \quad 30c \quad 5 \text{ lbs. } \$1.25 \quad 10 \text{ lbs. } \$2.30
\]

Mammoth or Tall Luscious Sugar—80 Days. Seeds gray mottled, blossoms purple. Height of vine about 5 feet. Vine light green, coarse, very similar in character to the Mammoth Melting Sugar. Pods, single, very broad, almost identical to Mammoth Melting, and eaten like a Snap Bean.

\[
\frac{1}{2} \text{ lb. } 20c \quad 30c \quad 5 \text{ lbs. } \$1.25 \quad 10 \text{ lbs. } \$2.30
\]

Mammoth or Tall Melting Sugar—80 Days. Seeds large, smooth, creamy white. Height of vine about 5 feet. Pods single, very broad, light green, 4 to 5 inches long, blunt, brittle, twisted and puffed, 1 1/2 to 2 inches wide, all the Peas being placed along the top of pod.

\[
\frac{1}{2} \text{ lb. } 20c \quad 30c \quad 5 \text{ lbs. } \$1.25 \quad 10 \text{ lbs. } \$2.30

INOCULATE ALL LEGUME SEEDS

Means Better Crops, Better Soils, Less Fertilizer Expense

A 100 percent pure culture of Nitrogen-fixing bacteria, selected and bred for maximum vitality and ability to transform nitrogen in the air into soluble nitrates and deposit them in the soil. Even though you may see no apparent difference in the legume crop above ground, the plants produced from seed which has been properly inoculated will have many nodules on the roots. The uninoculated plant is not a soil-builder, but takes its nitrogen from the soil—defeating the very object for which it was planted. Inoculation insures quicker catch, bigger crops and soil and crop improvement. Each bottle is guaranteed and dated.

TRY OUR PENNSYLVANIA STATE CERTIFIED PEPPER SEED

PEPPER

Native of South America. One ounce of seed should produce over a thousand plants in the greenhouse or coldframe. One-half pound of seed sown in the field should provide ample plants for 1 acre. Seed breaks ground in 11 days. One inch high in 13 days under most favorable circumstances in greenhouse.

All of Landreths' peppers are grown in the Eastern United States and are giving much better results than European peppers as to early maturity, trueness to type, and productiveness. No garden vegetable or fruit has so increased in demand in recent years as peppers; first, due to enormous use by commercial canners who pack peppers whole, and use them in making various relishes, and condiments; second, to its increased uses every day in the kitchen for making sauces, gravies and stuffing. Our large, thick-fleshed, hollow-crowned, certified pepper varieties are ideal for stuffing. Try them.

Owing to the fact that we have had so many of our customers asking us to supply them with seed for green peppers, we wish to state, that all peppers are green when young or immature. When peppers mature or ripen, they turn red in most cases, in some yellow, and still others variegated green, yellow and red.

Certified California Wonder

PENNSYLVANIA STATE PEPPER SEED CERTIFICATION REQUIREMENTS

PEPPER STOCK SEED

Before any variety can even be entered for certification in Pennsylvania, stock seed from carefully selected and staked plants must be saved the year previous to certification. D. Landreth Seed Co. goes further than that, as our stock seed is saved from carefully staked plants at least two years previous to certification, and seed from those staked plants proved by test a year in advance of certification. Only the very best tested strains are used for growing our fields for certification.

FIELD INSPECTIONS

Advanced Plant Pathologist K. W. Lauer, of the Bureau of Plant Industry, Department of Agriculture, Harrisburg, Pa., and Dr. Warren Mack, of Penn State College, accompanied by Hal Mills, Plant Breeder for D. Landreth Seed Co., inspect all our pepper fields before the first pickings are made. At least one more field inspection is necessary and sometimes one or two after that before these two inspectors are satisfied that the fields are up to the high standards required.

During these inspections the fields are rated for vigor, and the plants and fruits are carefully examined for disease and trueness to type, whole fields being discarded if they do not meet the very strict requirements.

INSPECTION OF EQUIPMENT

The seed saving machines are inspected, and the processes of washing and drying of the seed are checked.

GERMINATION TESTS

Samples of certified pepper seed are taken by Inspector Lauer direct from the bagged stocks. These are tested for germination at Harrisburg and certificates issued to our Company.

CERTIFICATION STICKERS

The Pennsylvania Department of Agriculture issues yellow certification stickers which we paste on each package of certified pepper seed. These stickers state that the pepper seed in the package was inspected and certified by the Pennsylvania Department of Agriculture. We guarantee the seed to be part of that inspected and passed in accordance with the Pennsylvania rules and regulations for the certification of pepper seed.
PEPPER—Continued

Anaheim Chili—100 Days—Hot. Plants medium in size with dark green leaves. The fruits are narrow and long, averaging 1 to 1½ inches wide at the shoulder, and 4 to 5 inches long, tapering gradually to a sharp point. The color is green when young and red when the fruits ripen. The flesh is very hot. Differs from Cayenne in having a wider shoulder on the fruits.

Pkt. 5c oz. 40c ½ lb. $1.25

Bull Nose—120 Days—Hot. Plants medium size, bearing many pendant fruits. The size is small, averaging 2½ x 3 inches, with very little tapering to 3 or 4 points. The outside of the fruits is fairly rough and ribbed. Color when young is green ripening to red. The walls are thin, and the flesh is hot.

Pkt. 5c oz. 30 ½ lb. $1.00

Bull Nose (Royal King)—120 Days—Sweet. This is identical to Bull Nose Hot in plant and fruit characters but the flesh is sweet.

Pkt. 5c oz. 45c ½ lb. $1.50

California Wonder—120 Days—Sweet. We have a good strain of this variety. See description of our Certified California Wonder for full details as our California Wonder differs only in uniformity of stock, size of fruit and thickness of flesh.

Pkt. 5c oz. 56c ½ lb. $1.75

California Wonder (Certified) — 120 Days — Sweet. Plants mostly upright, medium size and fairly compact. Foliage dark green and glossy with large, broad leaves. Fruits are borne upright, medium width and length, averaging 3 x 3½ inches, with only a very slight taper to mostly 4 points. The crown is generally hollow, and the outside of the fruits very smooth. Color when young is dark green and very dark red when ripe. The walls are very thick, and the flesh sweet. One of the finest for stuffing with meat. Certified California Wonder differs from Florida Giant in being earlier in maturing, having smaller plants, and with smaller fruits. It is better suited to northern growing conditions than Florida Giant. Plant some Certified California Wonder.

Pkt. 10c oz. 96c ½ lb. $3.25

Cheese (Sunnybrook)—110 Days—Sweet. Medium-sized plant, producing many small fruits borne upright. Size is generally 3 inches wide and 1 inch thick, the shape of a Cheese pumpkin. The fruits are very smooth, the color when young being green, and ripening to a deep red color. The walls are very thick and the flesh sweet. Used for pickling whole.

Pkt. 5c oz. 35c ½ lb. $1.15

Cherry Red (Large Red Cherry)—100 Days—Hot. About same as Cheese in shape but a little smaller size. Flesh is hot.

Pkt. 5c oz. 30c ½ lb. $1.00

Chinese Giant—130 Days—Sweet. Medium sized plants, bearing pendant, very large fruits, mostly 4 x 4 inches with no tapering to the 4 or 5 irregular points. The fruits are very rough and much ribbed, and belly-out at the center like a Chinese lantern. When immature they are green and ripen to red. Walls are thin and the flesh sweet. Where very large, rough fruits are wanted, this is the kind to plant, but the thinness of the walls is a disadvantage. Certified World Beater is superior to this variety because the fruits are smooth and the walls thick. Size is a little smaller.

Pkt. 5c oz. 55c ½ lb. $1.75

Crimson Giant (Ohio Crimson)—125 Days—Sweet. This is similar to Chinese Giant, but the fruits are smaller. It matures its crop earlier, but not as early as Certified Ruby King or Certified World Beater. These are both very much superior, having larger and smoother fruits with thicker walls.

Pkt. 6c oz. 45c ½ lb. $1.50

Florida Giant (Certified) — 130 Days—Sweet. This selection out of California Wonder is becoming an important variety in the South. It is not as well suited to the North, because of its late maturity. The plants are taller and coarser than California Wonder, and the leaves are wider. The fruits are borne upright and are generally wider and longer than California Wonder, otherwise, they are the same. Use Certified California Wonder for the North and Florida Giant for the South.

Pkt. 10c oz. 95c ½ lb. $3.25

Golden Bell (Golden Dawn)—120 Days—Sweet. This is a golden Bull Nose, being identical to this variety in type of plant and fruits. The color of the young peppers is very light green, turning to light yellow, then an orange-yellow color as they mature. The flesh is medium thickness and sweet.

Pkt. 5c oz. 55c ½ lb. $1.75

Harris’ Early Giant—110 Days—Sweet. This variety might be described as an earlier World Beater since the general characters of plant and fruits are about the same. It is well suited to the most northern states where World Beater matures too late. The fruits of Harris’ Early Giant, however, average a little smaller, the outside is more rough, and the flesh is not as thick as World Beater.

Pkt. 5c oz. 40c ½ lb. $1.25

Long Cayenne—100 Days—Hot. Medium sized plant, producing many pendant, long, thin fruits, averaging ½ to 1 inches wide x 3½ to 4 inches long, tapering gradually, twisting and curving to a single point. This variety has a distinct cap on the stem end of the fruit. The outside of the fruit is very wrinkled and creased, the color is green when young, ripening to a very dark red. The flesh is very hot. It is used extensively for making commercial hot sauces and piquant gravies by thousands of housewives.

Pkt. 5c oz. 40c ½ lb. $1.25

Certified Ruby King (Black’s Strain)
PEPPER—Continued

Louisiana Cayenne—105 Days—Hot. Large upright plants with dark green, wide leaves, producing an abundance of very long and slender, pendant fruits which average 3/4 to 1 inch in diameter at the stem end or shoulder, gradually tapering, twisting and curving for 5 to 6 inches, ending in a single point. The cap is very small which is a distinct advantage to canners. The outside of the fruit is greatly wrinkled, the color is green when young, turning to a deep red when ripe. The flesh is very hot. Used most extensively by canners in Louisiana where it was developed by Dr. Miller of the Agricultural Experiment Station. This improved strain of Cayenne should take the place of the old standard Long Cayenne since it produces more and longer fruits and has a smaller cap than the other. Try it. Pkt. 5c oz. 45c 1/4 lb. $1.50

Neapolitan—100 Days—Sweet. Medium sized plants, producing many upright small fruits, averaging 1 1/2 to 2 inches wide x 3 to 5 inches long, tapering to a single blunt point. The outside of the fruits is fairly smooth, the color is light yellowish green, ripening to red, and the walls medium thickness. The flesh is sweet. We believe our Certified Ruby King is superior to Neapolitan although it is a few days later. Try Neapolitan in the Northern States where the growing season is the shortest. Pkt. 5c oz. 30c 1/2 lb. $1.00

Pimiento (Perfection)—130 Days—Sweet. Large coarse, dark green plants, producing many fine, medium-sized, pendant fruits in the Southern States as it requires a long growing season. Fruits about 2 to 2 1/2 inches wide and 3 1/2 to 4 inches long, tapering gradually to a single blunt point. The outside of the fruits is smooth, the color green when young, ripening to a deep red color. The walls are thick and the flesh sweet. Used for canning whole. Pkt. 5c oz. 30c 1/2 lb. $1.00

Royal King—(see World Beater).

Ruby Giant—(see World Beater).

Ruby King—110 Days—Sweet. See Certified Ruby King for complete description. Ruby King differs from Certified Ruby King in not being as prolific, the fruits are not as uniform in shape nor size, they are not as smooth and the walls are thinner. Pkt. 5c oz. 30c 1/2 lb. $1.00

Ruby King Black Strain (Certified)—110 Days—Sweet. Plants upright and large, with medium green foliage of medium-sized leaves. Fruits are borne pendant, medium width and long, averaging 2 1/2 to 3 inches wide at the shoulder, and 4 1/2 to 5 inches long, tapering gradually to 3 or 4 points. The crown is mostly hollow, and the outside of the fruits is fairly smooth. The color is green with a slightly blackish tinge when young, and red when the fruits ripen. The flesh is thick and sweet. Differs from ordinary Ruby King in having more uniform and larger fruits with thicker flesh and a hollow crown. A fine strain of this variety. Try Certified Black Strain Ruby King. Pkt. 10c oz. 90c 1/2 lb. $3.25

Ruby King Black Strain. The same as above in character except Not Certified. Pkt. 5c oz. 60c 1/2 lb. $2.00

Small Cayenne (Small Chili Red)—100 Days—Hot. A small, upright fruited type, size 1 1/2 inches long x 1/2 inch thick, tapering to a sharp point. Fairly rough outside. Color green, ripening to a dark red. Very hot. Used for making hot sauces and relishes. Pkt. 5c oz. 40c 1/2 lb. $1.25

Waltham Beauty—100 Days—Sweet. This new variety was developed at the Waltham Vegetable Field Station in Massachusetts. It is becoming increasingly popular as it produces an abundance of medium-sized, thick fleshed fruits in New England. Pkt. 10c oz. 55c 1/2 lb. $1.75

Windsor A—100 Days—Sweet. Another new variety developed at the Connecticut Agricultural Experiment Station. Medium sized plant, producing many pendant medium-sized fruits, averaging 2 to 2 1/2 inches wide x 3 1/2 to 4 inches long, gradually tapering to 1 to 4 points. The outside of fruits is smooth, the color light yellowish-green, ripening to red. The walls are thick and the flesh sweet. Given an All America Vegetable Award for 1937. Supply of seed limited. Pkt. 10c oz. 55c 1/2 lb. $1.75

World Beater (Ruby Giant)—115 Days—Sweet. A cross between Ruby King and Chinese Giant and an improvement on both. See Landreth Giant for complete description. This stock of World Beater while very good, is not as prolific, not as uniform, not as smooth nor as thick-fleshed as Landreth Giant. Pkt. 5c oz. 30c 1/2 lb. $1.00

World Beater (Certified)—116 Days—Sweet. Plant is upright and large with medium-green leaves of medium size. The fruits are pendant and large, averaging 3 1/2 x 4 inches in size, with very little tapering to the generally 4 points. Crown is usually hollow with the outside of the fruit fairly smooth. Color of the fruits is green when young, ripening to red. This plant selection in World Beater has exceptionally thick walls for this variety. The flesh is sweet. Uniformity of size and shape of the fruits, freedom from disease, thick flesh and hollow crown make this a superior strain. The seed is tested carefully for germination by The Pennsylvania Department of Agriculture. Try this Certified World Beater. Pkt. 10c oz. 90c 1/2 lb. $3.25
Native of Tropical America. Four Pounds of Seed Will Plant an Acre. Hills 8 x 8 if Planted in the Open. Breaks ground in 4 days. One inch high in 8 days under most favorable circumstances in greenhouse. The time for planting Pumpkin seed varies from the first Corn planting until about a month subsequent. Later than that a successful crop cannot be expected as this plant requires a long season. When grown with Corn every fourth hill of every fourth row may be planted in Pumpkin Seed and this should be done when the Corn is planted. During the working of the Corn, the Pumpkin plants will stand unharmed, and after the corn cultivation ceases, the Pumpkin vines will extend over the field, almost covering it. Pumpkins are more of a field than a garden Vegetable.

**Brother Jonathan or Green Striped Cashaw—116 Days.** Fruit large, bottle shaped, early, with very slight crook-neck, not as shapely a neck as the Landreths' Yellow Cashaw, many fruit being almost straight. Color creamy white, with irregular stripes of green. Flesh light yellow and thick. Average weight about 12 pounds.

Pkt. 6 oz. 15c ½ lb. 30c lb. $1.00

**Connecticut Field or Big Tom—115 Days.** A large, rich, somewhat ribbed, orange yellow, slight oval or cylindrical fruit, flat on end. Very productive, used extensively for canning. Popular for pies. Grown very largely in Corn fields. Average weight about 20 pounds.

Pkt. 5c oz. 10c ½ lb. 25c lb. 70c

**Japanese Pie—115 Days.** Seed large, marked in an irregular way like Chinese letters. Yellow fleshed, fine quality. Dark green skin. Similar in shape to Cashaw, but not nearly so crooked a neck. Color at maturity dark green, heavily russeted at stem-end, very productive. Average weight about 10 pounds.

Pkt. 5c oz. 10c ½ lb. 35c lb. $1.15

Pkt. 5c oz. 10c ½ lb. 25c lb. 70c

**LANDRETHS’ LARGE CHEESE—108 Days.** An excellent kitchen variety. Shape flat like a Cheese box, from which it derived its name, although it is slightly ribbed on edges. Outside color lemon, no stripes, fine quality and keeper. Often 15 inches across the top and 6 to 7 inches thick, top and bottom indented. We can say without hesitancy there is no stock in the market equal to the Cheese Pumpkin we are offering. Don't confuse this stock with the Kentucky Field offered by many seedsmen as Cheese. Average weight 17 pounds.

Pkt. 6 oz. 15c ½ lb. 40c lb. $1.25

**Small Early Sugar or New England Pie—115 Days.** This is a very fine, small, sweet, fine grained productive sort for pies, of good keeping qualities. Fruit oval, or globular, flattened at both poles, 8 to 10 inches in diameter, slightly ribbed. Flesh a deep rich yellow or orange. Weight 6 to 8 pounds.

Pkt. 6 oz. 15c ½ lb. 30c lb. 90c

**Tennessee Sweet Potato—110 Days.** Smooth, pear shaped, with a slightly crooked neck, white skin slightly mottled with green. Flesh creamy white of fine texture. Weight about 14 pounds.

Pkt. 5c oz. 15c ½ lb. 30c lb. $1.00

**LANDRETHS’ YELLOW CASHAW—116 Days.** Our stock of this cannot be excelled by any. It is a mammoth prolific Pumpkin, frequently weighing 30 pounds, with a very large, full, meaty, curved neck, with the best colored meat to make fine pies. Both outside and inside color very rich cream yellow. No stripes of any kind. So crookneck at times, to bend back so as to almost touch the main fruit. Very productive. Used extensively for canning. Popular for pies. Average weight about 17 pounds.

Pkt. 6 oz. 15c ½ lb. 40c lb. $1.25

**Yellow Monster, King of the Mammoth or Pitron—120 Days.** This is the largest Pumpkin on the market and in reality is a monster. For many years fruits of this sort have been awarded every prize in State and County Fairs for the largest Pumpkins. It is not only an exhibition sort but is a very profitable variety for raising for stock feeding. Bright lemon in color, mottled with orange. Round with a tracing of ribbing. Excellent flavor for table use. Weight 60 to 100 pounds.

Pkt. 6 oz. 15c ½ lb. 40c lb. $1.25
RADISH

Radish originally came from the East Indies and has been cultivated in Europe since the 16th Century. Four Ounces of Seed Will Sow 100 Yards of Row. Six Pounds Will Sow An Acre. Seed breaks ground in 5 days. One inch high in 8 days under most favorable circumstances in greenhouse.

Sow Radish Seed as soon as the ground is in condition to work, or just before the Cherry is in bloom. This is one of the earliest Vegetables that one can grow in the garden in the Spring. Radishes grown on thin soil can never be good. They will be misshapen and tough. The shape largely being influenced by the depth the seed is planted. When planted too deep they usually get too long. To be good, they must always be grown quickly. Radishes which grow slowly are usually tough and hot. In selecting the seed of Radishes for hot beds, always be sure to select those varieties with short tops.

EARLY TURNIP VARIETIES

**Crimson Giant—25 Days.** This is one of the largest of the early all-red varieties. Roots almost globular in shape, 1 to 1 1/2 inches in diameter when edible. Tops slightly taller than Scarlet Globe. Crimson in color, of excellent quality, remaining edible a long time. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**Early Scarlet Globe—23 Days.** Roots of this variety are crisp and tender, slightly oval, of a first-class brilliant scarlet color, excellent for early forcing or for outdoor or kitchen garden planting. Most highly recommended and the most popular sort grown today. Our stock of this variety cannot be surpassed by any Scarlet Globe on the market, no matter what its name may be. Tops short, about 4 to 5 inches. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**Early Deep Scarlet Turnip—24 Days.** Scarlet in color, smooth skin, round roots 1 inch in diameter, slightly flat, excellent for forcing. Short tops. Listed by us for over 100 years. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**Early Scarlet Turnip White Tipped—24 Days.** Turnip shaped to oval. Scarlet crowns with bottom one-third white. The very attractive Radish familiar on the market stands. Short tops. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**French Breakfast—23 Days.** Olive shaped or stump rooted. Upper part of bulb bright scarlet, white tipped one-third of the way up from the bottom. An excellent variety for the private garden. Pull early as it soon becomes pithy. About 1 1/2 inches long and 3/4 inch in diameter. Short tops with the bulbs growing slightly above ground. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**Philadephia White Box—30 Days.** So named because often grown in open frames or boxes. Remains in solid edible condition a long time. Roots white and globe to turnip shaped. Does not get pithy until quite old, which makes the sort most desirable for the family or market gardener. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**LANDRETHS’ SPECIAL WHITE TIPPED SCARLET or Sparkler—23 Days.** Something extra fine. Small in leaf, very early. Flat to globular, with an unusual amount of white on the bottom which often extends one-third to one-half up the bulb, the lower half being white, the upper half bright scarlet; consequently, the contrast in color being very showy either on the table or market stand. We highly recommend this as a most attractive sort. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 80c

**LANDRETHS’ 16-DAY SHORT LEAVED EXCEEDINGLY EARLY SCARLET OR SAXIA.** A fine brilliant scarlet globe-shaped bulb, which has very small tops. A most desirable variety for forcing. We cannot recommend it too highly. It will lead the market in all scarlets, being ready for table use in 15 days from germination. This is a remarkable Radish for indoor culture, especially for private gardeners. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 80c

**LONG ROOTED VARIEITES**

**Chartier or Long Rose—35 Days.** Sometimes called Sheppard. This is an excellent variety for planting outdoors. Roots slim, 1 inch thick, averaging 7 to 8 inches in length. Bright rose in color, very brilliant, shading to a white tip. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c

**Cincinnati Market—30 Days.** A decided improvement over Woods Early Frame. Scarlet four-fifths of the length, one-fifth at the point being white. It is a slim, transparent radish about 6 to 7 inches long. Flesh white, crisp, mild and tender. Pkt. 5c oz. 10c 1/2 lb. 25c lb. 75c
RADISH—Continued

Long Scarlet Short Top—35 Days. This is a first-class brilliant scarlet Radish growing 7 to 8 inches long, with a good shoulder and one of the best long scarlet Radishes on the market. Listed by us for over 100 years.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Winter Varieties

Celestial or Chinese Half Long Stump—66 Days. A quick growing variety somewhat resembling Half Long Stump Rooted Carrot in shape, only fuller. Roots are white, 5 to 6 inches long, 2½ to 3 inches in diameter. Very crisp and tender and of delicate flavor. Does not make bulbs for Spring planting. This is one of the best Winter Radishes known.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

China Rose or Scarlet China Winter—58 Days. A fine Winter sort, half long stump, scarlet in color four-fifths of the length, remainder white. The roots are cylindrical, larger at the bottom than at the top. Skin a bright deep rose, flesh white, tops moderately large. Is a cutleaf, stem tinged with rose. Roots about 5 inches long. Blunt at both ends.

Pkt. 5c oz. 10c ½ lb. 30c lb. 85c

Long Black Spanish—65 Days. Roots 8 to 10 inches long and 1½ to 2 inches in thickness. Outside skin black. Flesh solid, pure white and of good texture. A very hardy Winter Radish, particularly desirable. Listed by us for over 100 years.

Pkt. 5c oz. 15c ½ lb. 30c lb. 85c

Long White Spanish—70 Days. Similar to Long Black Spanish except color. Keeps as well as a Potato. Listed by us for over 100 years.

Pkt. 5c oz. 15c ½ lb. 30c lb. 85c

Round Black Spanish—60 Days. A fine round or top-shaped, black skinned Winter Radish, 2 to 3 inches in diameter. Skin almost black, flesh pure white.

Pkt. 5c oz. 15c ½ lb. 30c lb. 85c

Long White Icicle—30 Days. We consider this the best all-white Long White Radish. The roots are shorter than the old White Vienna and earlier and very brittle. They are 5 to 6 inches long and about ½ inch in diameter. Pure white and transparent skin, possessing unsurpassed eating qualities. Mild in flavor.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Strasburg Long White or Hospital—40 Days. Long in form, roots 4 to 6 inches and about 1½ inches in diameter. Skin is pure white and smooth. Roots thick at shoulder, tapering to a point. Remains in edible condition a long time.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Wonderful Half Long or Half Long Brightest Scarlet—32 Days. An early half long with a sharp, white point. Color of upper part brilliant scarlet. Length 2½ inches contracting from a broad shoulder to a sharp point.

Pkt. 6c oz. 10c ½ lb. 25c lb. 75c

Scarlet Globe (See Page 61)
Top Row Planted Too Shallow
Middle Row Planted Correct Depth
Bottom Row Planted Too Deep
All Other Conditions Identical
RAPE or COLEWORT

Seed breaks ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse.

One of the very best plants for pasturing cattle, sheep and swine. Under very favorable conditions the pastures will be ready within six weeks, but in any event, in eight or nine weeks. One acre will feed a dozen sheep six or eight weeks. As rape thrives best in cool weather, plant early in the Spring or late in the Autumn. Broadcast five pounds of seed per acre or if sown in drills three pounds are sufficient.

Dwarf Essex—lb. 18c 10 lbs. $1.60.

RHUBARB or PIE PLANT

Native of Mongolia. Four Ozs. of Seed Will Produce Enough Roots for 100 Yds. of Row. Seed breaks ground in 11 days. One inch high in 18 days under most favorable circumstances in greenhouse.

It is very easy to grow your own rhubarb roots from seed. Healthy, strong, excellent roots can be grown in one year. The second and succeeding years they will produce an abundance of rhubarb equal to any grown from roots. Roots grown from our seed have never been known to be diseased and are healthy, always hardy, and of strong growth.

Victoria—Pkt. 6c oz. 15c ½ lb. 45c lb. $1.40
Linnaeus—Pkt. 6c oz. 15c ½ lb. 45c lb. $1.40.

SALSIFY or OYSTER PLANT

A Native of South Europe. Four Ounces of Seed to 100 Yards of Row. Eight Pounds Will Sow an Acre. Seed breaks ground in 9 days. One inch high in 13 days under most favorable circumstances in greenhouse.

This plant produces an edible root, long and slim, white-fleshed and smooth dark yellowish outside skin and has a distinct oyster flavor. Leaves gray-green, long, straight and narrow. It is a native of Sardinia, but only within the last 100 years used as a culinary vegetable. Sow in drills when the Cherry tree is in bloom, or as soon as ground can be worked. The drills should be 18 to 24 inches apart and seed planted in deeply dug and well-manured ground. When the plants are up a few inches, weed and thin them so as to stand 3 to 4 inches apart. In Fall, bury in pits, same as Carrots or Beets. Cultivate in all respects as directed for Carrot.

Sandwich Island Mammoth—110 Days. A very superior strain producing smooth, large, vigorous roots, 6 to 8 inches long, 1 to 1½ inches thick. Roots similar to a slim Parsnip. Often called "vegetable oyster." Pkt. 6c oz. 20c ½ lb. 60c lb. $2.00.

SORREL

European Origin

Sorrel is cultivated for its leaves which are used in the same manner as Spinach. As with Spinach the seed stalks should be cut off as soon as they appear; if this is not done the leaves become acrid and tough and soon dry up. Cultivate the same as Spinach but plant in drills 18 inches apart. Listed by us over 100 years ago.

Broad Leaved—Pkt. 5c oz. 20c ½ lb. 60c lb. $1.50.

SUNFLOWER

The seed can be sown from early Spring until July, depending upon the time the crop is wanted. Drill in rows 3½ feet apart, then thin the plants one to every 12 or 15 inches.

Early Russian—½ lb. 12c lb. 18c 10 lbs. $1.60.
Spinach was first cultivated in Western Asia. The seed was originally all prickly. Four Ozs. of Seed Will Sow 100 Yds. of Row. Ten Lbs. Per Acre When in Rows. Twenty-five Lbs. to the Acre Broadcast. Ask for Special Prices on Larger Quantities. Seed breaks ground in 8 days. One inch high in 12 days under most favorable circumstances in greenhouse.

**Blight Resistant or Virginia Blight Resistant Savoy—46 Days.** Developed in 1921 by the Virginia Truck Experimental Station, Norfolk, Virginia, after many years of careful breeding and selecting. It is of the Bloomsdale type, Very resistant to mosaic diseases, yellows or blight. It is not adapted to Spring planting as it shoots to seed quickly at that time. Pkt. 5c ½ lb. 15c lb. 40c

**BLOOMSDALE LONG STANDING—45 Days.** Remains about 8 to 14 days longer in table condition than the main crop, Bloomsdale Reselected, is larger and about 5 days later. Remarkable in the almost total absence of male plants. This selection possesses all the good qualities of the famous Bloomsdale Reselected, from which it is a plant selection made in Holland, the habit of remaining longer in shipping condition after Bloomsdale shoots to Seed, which marks it as a very valuable type. Sow it and be convinced that it has unusual merit. Is fast gaining supremacy over all other Spinach. Pkt. 5c ½ lb. 15c lb. 40c

**BLOOMSDALE RESELECTED DARK GREEN—40 Days.** Sometimes called Norfolk Savoy. The Landreths introduced and named this general type in 1826. Since then it has become a standard and now appears in all catalogs in the United States and is equally well known in Europe. No Spinach is so well known as this variety and we are perfectly safe in saying that five times as much of this is sold and planted in the United States, as any other variety. As an Autumn sort it is superior to all others, but in Spring it is inclined to shoot early. The leaves are twisted, blistered or savoyed, and a glossy dark green, giving them an elasticity adapting them for transportation over long distances and at the same time giving the crop large measuring qualities. Edible in 40 to 55 days from planting. This Seed may be sown in the Autumn or as early in the Spring as the condition of the ground will permit. We advise by all means to plant in the Autumn the Bloomsdale Reselected Dark Green Spinach as it is by far the best of all the Autumn varieties. It is, however, not as good for Spring planting as Bloomsdale Long Standing Juliana, or Nobel, because it bolts or shoots early to seed. Spinach, when planted south of New York City, stands out all Winter and during the various open spells throughout the Winter can be cut and sent to market as a green vegetable; very valuable in this respect. Pkt. 6c ½ lb. 12c lb. 35c
SPINACH—Continued

**Giant Nobel or Gaudry—60 Days.** An erect, strong growing, long standing sort of the Flanders type. Leaves large, unusually broad, firm, and thick. Arrow shaped with a rounded top. Light green to yellowish green in color, smooth and the largest of any Spinach. The most desirable of all the Long Standing types for those who do not favor a savoy leaf. Slow to shoot or bolt to seed, a most decided acquisition. 

Pkt. $0.50 / 1 lb. $0.15 / 40 lb. $0.40

**King of Denmark—60 Days.** An intermediate, long-standing, heat resistant variety, hardy, vigorous grower, spreading in habit, inclined to grow flat on the ground, leaves large, long, broad, somewhat savoyed, with long stems. 

Pkt. $0.50 / 1 lb. $0.15 / 40 lb. $0.40

**Long Standing Round Seeded Thick Leaved—60 Days.** Plants very large and late. Leaves broad, arrow-shaped to round, smooth, dark green. Used more by market gardeners or truckers than kitchen gardeners. 

Pkt. $0.50 / 1 lb. $0.15 / 40 lb. $0.40

**New Zealand—70 Days.** Absolutely distinct in form, color and habit from other Spinach—it is not a Spinach, though used as a Spinach. Foliage thick, succulent, dark green, never sunburns, a true heat resistant, leaves covered with water globules like an ice-plant. Later to mature for table than Spinach of usual form, but remaining in edible condition ten times as long. Plants remain in edible condition from July until killed by frost. A sort to "cut and come again," as it is most productive, continuously over a period of 150 days. The plants spread five times as wide and rise to three times the height of ordinary Spinach, covering the ground. Slow to germinate. Excessive heat does not check its growth. Listed by Landreth first in our 1832 Catalogue. It originated in New Zealand as the name implies, and was carried to England by Sir Joseph Banks. A most desirable vegetable for small home garden where space is limited. Rows should never be less than 2 feet apart. Plants should be thinned 4 to 5 inches apart. 

Pkt. $0.50 / 1 lb. $0.25 / 40 lb. $0.75

---

*New Zealand*
SUMMER and WINTER SQUASH

Of American Origin. Three Ounces of Seed Will Plant 100 Yards of Row. Use Three to Four Pounds per Acre. Seed breaks ground in 6 days. One inch high in 9 days under most favorable circumstances in greenhouse

This seed may be planted when the Apple is in bloom, or as soon as the ground can be worked, and for several weeks subsequently, but not later with much hopes for a crop. It should be planted in hills 4 x 4 feet for the Bush varieties and 6 x 8 feet for the long running sorts. An admirable vegetable when cooked young.

SUMMER VARIETIES

Benning’s or Green Tinted Bush—48 Days. An early greenish colored scalloped squash of excellent quality. Similar to White Bush in shape and manner of growth, with somewhat thicker, smaller fruits. A true non-running squash.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.10

Cocozelle or Italian Green Striped—70 Days. A compact bush vine. Fruit somewhat the shape of a Banana Cantaloupe, about 12 to 15 inches long, 4 to 5 thick. When young dark green, afterwards changing to alternate stripes of green and gold. Excellent for frying like Egg Plant.

Pkt. 5c oz. 15c ½ lb. 40c lb. $1.20

Early White Bush or Patty Pan—62 Days. The Cymbling of the South, sometimes called Patty Pan. Listed by us for over 100 years. The shape of this variety is round, about 4 inches thick, 8 to 10 inches across, scalloped on the edges with frequent warts on sides. Color, creamy white. Fine to stew.

Pkt. 5c oz. 15c ½ lb. 40c lb. $1.25

Golden Summer Crookneck—60 Days. A large fruited selection of the old-time Golden Summer Crookneck. Fruit averages about 12 to 18 inches long and 6 to 8 inches thick, well crooked and covered with warts, color a deep orange. When young, a very good slicer and excellent fried.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.15

Mammoth Straightneck—60 Days. A selection of the Giant Summer Crookneck. It is the same in all respects except that the neck is straight.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.15

WINTER OR RUNNING VARIETIES

Boston Marrow—95 Days. A meaty or thick fleshed, very productive variety for canning. Fruits keep weeks after the vines have been killed by frost. Color of skin bright orange shading to lighter color. Flesh deep orange, thick, firm. A fine Squash for pies and Winter use.

Pkt. 5c oz. 10c ½ lb. 25c lb. 75c

Delicious—90 Days. In shape resembling a medium sized Hubbard. Shell not very thick, but is rather hard and strong; color, usually dark green, sometimes lighter and mottled. Flesh thick, fine grained; color, bright yellow.

Pkt. 5c oz. 15c ½ lb. 40c lb. $1.25

Hubbard Blue—96 Days. An early blue skinned Hubbard of excellent quality.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.10

Hubbard Golden or Red—92 Days. Similar in shape to the Green Hubbard, only earlier and smaller. Skin usually warted, of a fine orange-red color except for a slight tinge of green at blossom end. Flesh deep orange. A fine keeper.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.10

Hubbard Improved or Green—95 Days. A very popular Squash, pointed at both ends. Skin dark green to bronze, slightly marked with orange. Flesh is a bright yellow orange; tough rind. An excellent keeper, sometimes lasting until Spring. A favorite with the Canners.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.10

Hubbard Warty—96 Days. Identical to the old form of Hubbard in every way, except a trifle larger. Covered with warts, and by some preferred to the smooth Hubbard.

Pkt. 5c oz. 15c ½ lb. 35c lb. $1.10

Mammoth Chile—96 Days. The largest Squash in cultivation, often reaching a weight of 100 pounds. Fruit long and pointed at blossom end. Very showy, skin bronze, mottled, flesh thick, coarse, color of the flesh is orange.

Pkt. 5c oz. 15c ½ lb. 45c lb. $1.40

Table Queen, Acorn or Des Moines—66 Days. Small, about 6 to 8 inches long, 3 inches in diameter, trailing habit. Color deep green turning to orange; fruit ribbed; skin smooth. As it ripens used frequently. When mature, desirable for home, market garden use and shipping. Weight about 2 pounds.

Pkt. 5c oz. 16c ½ lb. 40c lb. $1.20
LANDRETHS' TOMATO SEED IS UNEXCELLED

TOMATO or LOVE APPLE

One Ounce of Seed Should Produce 2000 Plants in the Greenhouse or Coldframe. One-quarter Pound of Seed Sown in the Field Should Produce Ample Plants for 1 Acre. Seed breaks ground in 8 days. One inch high in 12 days under most favorable circumstances in greenhouse.

Tomato plants should be hardened before setting in the field. This is best accomplished by withholding water a few days previous to moving them to the field. An average production of fruits is 7 tons per acre but in 1934 one of our farmers produced over 21 tons to the acre on 10 acres by using our Certified Marglobe Seed. In 1936, there were 12 growers in Bucks County, Pennsylvania, alone, who produced over ten tons of fruits per acre with Landreths' Certified Tomato Seed.

In purchasing Landreths' Bloomsdale Farm Grown Tomato Seed, the buyer is certain of the absolute purity of what he buys. Every crop is produced from seed saved from hand-selected fruits of the preceding year, every one of the fruits being closely inspected and approved as to shape, color and internal structure, and what is more important, the only fruits saved are from vines of approved type, vigor, freedom from disease, and yield qualities. Landreth is distributing a free circular on the tomato. All growers should have one.

PENNSYLVANIA STATE TOMATO SEED CERTIFICATION REQUIREMENTS

Tomato Stock Seed—Before any variety can even be entered for certification in Pennsylvania, stock seed from carefully selected and staked plants must be saved the year previous to certification. D. Landreth Seed Co. goes further than that, as our stock seed is saved from carefully staked plants at least two years previous to certification, and seed from those staked plants proved by test a year in advance of certification. Only the very best tested strains are used for growing our fields for certification.

Field Inspection—Advanced Plant Pathologist K. W. Lauer of the Bureau of Plant Industry, Department of Agriculture, Harrisburg, Pa., and Dr. Warren Mack of Penn. State College, accompanied by Hal Mills, Plant Breeder for D. Landreth Seed Co., inspect all our tomato fields before the first pickings are made. At least one more field inspection is necessary and sometimes one or two after that before these two inspectors are satisfied that the fields are up to the high standards required.

During these inspections the fields are rated for vigor, and the plants and fruits are carefully examined for disease and trueness to type, whole fields being discarded if they do not meet the very strict requirements.

Certification Stickers—The Pennsylvania Department of Agriculture issues pink certification stickers which we paste on each package of Certified and Crown Picked Certified Tomato Seed. These stickers state that the tomato seed in the package was inspected and certified by the Pennsylvania Department of Agriculture. We guarantee the seed to be of part that inspected and passed in accordance with the Pennsylvania rules and regulations for the certification of tomato seed.

CROWN PICKED CERTIFIED TOMATO SEED

The demand for Crown Picked Tomato Seed has been so great that we have previously been unable to fill the orders for it. We now have Crown Picked Seed of all the certified tomato varieties listed. For Crown Picked Seed only the first or crown clusters of fruits are used. Some growers claim that crown picked seed is plumper and therefore produces earlier fruits the following year than the seed from later pickings. Separate descriptions of the crown picked certified tomato varieties are not necessary since those describing the certified stocks will suffice for both.

IN THE FOLLOWING DESCRIPTIONS OF OUR VARIETIES OF TOMATOES, WE HAVE PLACED A STAR ★ BEFORE EACH VARIETY OF WHICH WE HAVE CROWN PICKED CERTIFIED SEED. THE UNCERTIFIED VARIETIES DO NOT HAVE A STAR ★

★ BONNY BEST (CERTIFIED)—100 Days

This is an old favorite early tomato maturing after Earliana. The fruits are globular when small, becoming slightly flattened when they attain large size. Our strain has been selected for heavy yield, and where Bonny Best, John Baer, or Chalks Jewel is used for market or canning, we highly recommend our Certified Bonny Best as meeting the requirements of this group. In a test at Penn State College in 1935, Landreths' Certified Bonny Best produced the highest yield of marketable fruits of the 10 varieties in the Second Early Group, and the largest average size of fruits. In 1936, a grower in Bucks County produced over ten tons with our Certified Bonny Best.

C. Picked Certified—pkt. 16c oz. 80c ½ lb. $2.75

Uncertified—pkt. 5c oz. 30c ½ lb. $1.00

Certified—pkt. 10c oz. 56c ½ lb. $1.75
**BREAK O’DAY (CERTIFIED)—95 Days**

This recently introduced tomato has become a popular early red variety, grown in some western states with great success. Dr. F. J. Pritchard, of the U.S. Department of Agriculture, originated it by crossing Marvana with the Marglobe.

The vines are very open growing and somewhat resemble Earliana in appearance. The leaves are small and rather short for such a prolific plant. It is quite resistant to disease. The fruits are medium to large in size and quite closely resemble the Marglobe as to shape. Under good cultural and climatic conditions where a heavier vine growth and a somewhat lower summer temperature prevail, the Break O’Day will produce satisfactory external and internal color. This variety is not recommended for light nor sandy soils. It is only a few days later than our Earliana.

C. Picked Certified— pkt. 15c oz. 85c ¼ lb. $2.75

Uncertified— pkt. 5c oz. 40c ¼ lb. $1.25

**BROWN’S SPECIAL (CERTIFIED)—120 Days**

A new, late variety of considerable merit for canning, especially suited to the South. The stems of the plant are long, and the leaflets are large and dark green in color. The plant produces the largest amount of foliage of any tomato that we know of, therefore is well suited to lighter soil types. Heavy applications of nitrogenous fertilizers should not be made to this variety.

The fruits resemble Stone and Greater Baltimore in type, being somewhat flattened, but are much larger, averaging 6 to 8 ounces per fruit. The external and internal color is a dark red, and the interior structure is very solid with very small seed cavities. A distinguishing character of Brown’s Special is the light green color of the fruits just before they ripen.

Brown’s Special produced the highest yield per acre of the 7 varieties in the Late Group and the largest average size per fruit in a test at Penn State College in 1935.

In 1936, this variety also stood highest in yield of 6 late varieties in a test in Ohio.

The crop is produced later than Stone or any of that group. This is a fine juice and canning tomato, on account of its color and productiveness.

C. Picked Certified— pkt. 15c oz. 85c ¼ lb. $2.75

Certified— pkt. 10c oz. 75c ¼ lb. $2.50

Uncertified— pkt. 5c oz. 30c ¼ lb. $1.00

**CLARK’S EARLY (CERTIFIED)—100 Days**

A special strain in the Bonny Best Group, selected for use in Texas. Becoming increasingly popular in that state. Fruits good size and smooth like Bonny Best.

C. Picked Certified— pkt. 15c oz. 85c ¼ lb. $2.75

Certified— Pkt. 10c oz. 75c ¼ lb. $2.00

Uncertified— pkt. 5c oz. 30c ¼ lb. $1.00

**EARLIANA (CERTIFIED)—90 Days**

This variety is used by market gardeners for a first early. It produces an abundance of medium-sized fruits on a small vine.

C. Picked Certified— pkt. 15c oz. 85c ¼ lb. $2.75

Certified— pkt. 10c oz. 55c ¼ lb. $1.75

Uncertified— pkt. 5c oz. 30c ¼ lb. $1.00

**GREATER BALTIMORE (CERTIFIED)—105 Days**

A main crop or midseason variety grown in the South and the Middle West. It is earlier than the Stone types, and therefore may produce a more satisfactory crop for you. Our strain of Greater Baltimore has been carefully plant-selected for large sized fruits and for good red internal color and solid structure. The vines are vigorous and healthy. In 1936, a grower in Bucks County produced over 10 tons of fruits per acre.

C. Picked Certified— pkt. 15c oz. 85c ¼ lb. $2.75

Certified— pkt. 10c oz. 55c ¼ lb. $1.75

Uncertified— pkt. 5c oz. 30c ¼ lb. 90c

**GROTHEN’S RED GLOBE (CERTIFIED)—95 Days**

A new variety of the Break O’Day type developed in Florida. The vines have long stems like Break O’Day, but the leaflets are somewhat larger, and more abundant. The vines stand up better than Break O’Day, and therefore protect the fruit from sunscald.

The fruits are globe-shaped to slightly flattened, as large or larger than Break O’Day, with better external color than Break O’Day. The internal structure is very solid and meaty, and of a darker red color than Break O’Day.

Ten tons of fruit per acre is not an unusual yield for this variety, some good growers producing greater yields. The crop matures at about the same time as Break O’Day.

Certified— pkt. 10c oz. 60c ¼ lb. $2.00
TOMATO—Continued

★ JOHN BAER
(CERTIFIED)—100 Days

A second early used extensively in New York State. It is similar to a large Chalks Jewel.

C. Picked Certified—
pkt. 15c oz. 85c \frac{1}{2} lb. $2.75
Certified— pkt. 10c oz. 55c \frac{1}{2} lb. $1.75
Uncertified— pkt. 5c oz. 30c \frac{1}{2} lb. $1.00

★ THE LANDRETH
(CERTIFIED)—100 Days

This variety is our own selection and is an improvement on the vast majority of those in the second early group. The fruits are large and solid. The external and internal color is a deep red, making it a good early canning tomato used extensively in New York. In 1936, at a test in Ohio, The Landreth produced a higher yield than the so-called Master Marglobe, Early Stone, Indiana Baltimore, Rutgers, New Stone, Nystate and Brown’s Special. The fruits were firm, and of good grade, and the vines were heavy and healthy. A grower in Bucks County produced over 10 tons of fruits per acre last year.

C. Picked Certified— pkt. 15c oz. 85c \frac{1}{2} lb. $2.75
Certified— pkt. 5c oz. 70c \frac{1}{2} lb. $2.25
Uncertified— pkt. 5c oz. 55c \frac{1}{2} lb. $2.25

LANDRETHS’ NO SUBSTITUTE—110 Days

This is a very distinct variety in vine characters, being of the potato leaf type. The foliage is dark green, and the leaves broad like those of the potato. The fruits are medium in size and flattish round. The color is red. Due to the heavy foliage which acts as protection from sunscald, this variety may be grown successfully where others fail.

Pkt. 5c oz. 50c \frac{1}{2} lb. $1.75

★ LANDRETHS’ SUNRISE (CERTIFIED)—85 Days

We believe this strain is superior to others in the Earliana Group. The vines are small and compact but produce an abundance of large, red, smooth fruits under good cultural and soil conditions. For best results, plant Landreths’ Sunrise on good soil, and closer in the row than larger vined varieties.

C. Picked Certified— pkt. 15c oz. 85c \frac{1}{2} lb. $2.75
Certified— pkt. 10c oz. 55c \frac{1}{2} lb. $1.75
Uncertified— pkt. 5c oz. 45c \frac{1}{2} lb. $1.50

★ MARGLOBE (CERTIFIED)—100 Days

This variety is undoubtedly the best of all recent introductions. It was developed, named and introduced by the late Dr. Pritchard, of the Bureau of Plant Industry, United States Department of Agriculture, Washington, D. C. It has been vastly improved by us since its introduction by individual plant selection so that it is nearly perfect. It is globular in shape, deep red color, very little depression at the stem end, has few seeds and does not crack readily. The blossom scar is very inconspicuous. It has solid internal structure, no green core and is most productive, one of our ten acre fields in 1934 producing over 210 tons, that is at the rate of 21 tons of red ripe fruits to the acre. In 1936, six growers in Bucks County produced over 10 tons per acre with our Certified Marglobe. In Ohio, our Marglobe yielded \frac{1}{2} tons more per acre than the so-called Master Marglobe. In this test it was stated that Landreths’ Marglobe had very nice tomatoes all through the season. It was their best variety. The vines are robust and as wilt-resistant as any variety we have ever seen. It
TOMATO—Continued

possesses everything desirable in character and is a most attractive tomato in every way. The northern market much prefers a red tomato to a pink. The growers have been using a Pink Globe because they could not get a red. Marglobe has been found to be the best tomato which can be grown in Florida and other parts of the South for shipping to northern markets. We recommend the Marglobe for market gardeners, kitchen gardeners and canners. The seed which we offer is all grown by us and is an improved strain of the original stock obtained from the late Dr. Pritchard. This variety will be more generally cultivated during the summer of 1937 as it is the surest cropper and therefore the most profitable of all varieties. We cannot say too much for our strain of Marglobes and we hope all our customers will order it.

C. Picked Certified—pkt. 16c oz. 86c ½ lb. $2.76
Certified—pkt. 10c oz. 55c ½ lb. $1.75
Uncertified—pkt. 5c oz. 30c ½ lb. $1.00

MARKET CHAMPION—120 Days

A late-maturing variety, producing very large fruits. Vine large and coarse. Fruits, large, flattish round, fairly good color. Our Brown’s Special is superior to this variety as fruits are as large, of better color, and smoother exterior.

★ NYSTATE (CERTIFIED)—100 Days

A new red variety from the Geneva Experiment Station. Developed especially for the canners of New York. Midseason, Bonny Best type, with flattish round fruits of good external and internal color. Does not crack at the stem end as readily as some other varieties.

C. Picked Certified—pkt. 20c oz. $1.06 ½ lb. $3.50
Certified—pkt. 15c oz. 80c ½ lb. $2.50
Uncertified—pkt. 10c oz. 55c ½ lb. $1.75

★ PENN STATE (CERTIFIED)—90 Days

The Penn State is a new hybrid created by crossing Cooper’s Special with Earliana. A development of Dr. Myers, of Penn State College. This is a self-topping type of vine with short thick stems, and large, coarse dark green leaflets. Because of the small size and compactness of the plants, they may be set in rows 3 feet apart, and 18 to 24 inches between the plants in the row. This close planting tends to bunch up the foliage, thus giving some protection to the somewhat exposed fruits.

The fruits are borne in clusters of 4 to 6, closely set in the center of the plant, several clusters generally being found bunched together within a very small radius from the main stem. The fruits are medium in size, smooth, slightly flattened, of good red outside and inside color, and of fine solid internal structure with small seed cavities.

The total tons of marketable fruits of Penn State are generally better than Earliana because the fruits are smoother and ripen up more evenly than this variety. Since the plant tends to bunch the majority of the fruit at the center, and these fruits tend to ripen at about the same time, only 3 or 4 pickings are generally necessary to harvest the complete crop. In most sections, Penn State will mature as early as Earliana. Do not confuse Landreths’ Certified Penn State Tomato with what was sold by other seedsmen in 1936. Our stock has been carefully hand selected to remove the off-type plants found last year. A grower, in 1936, produced over 10 tons per acre with our Certified Penn State.

C. Picked Certified—pkt. 15c oz. 86c ½ lb. $2.76
Certified—pkt. 10c oz. 70c ½ lb. $2.25
Uncertified—pkt. 5c oz. 55c ½ lb. $1.75

PEAR SHAPED RED—100 Days

Small pickling fruits shaped like a pear.

PLUM SHAPED RED—100 Days

2 inches long by ⅜ to 1 inch in diameter, the shape of a plum. Fruit bright or scarlet red, used in pickling in unbroken form.
TOMATO—Continued

★ PRITCHARD or SCARLET TOPPER (CERTIFIED)—95 Days

The Scarlet Topper or Pritchard tomato, a new variety of considerable merit, was developed by the late Dr. Fred J. Pritchard, of the United States Department of Agriculture. Cooper’s Special, a self-topping pink tomato, was crossed with Marglobe, a red variety now widely grown.

The plants of the new variety Pritchard (Scarlet Topper) are comparatively small, the leaves and stems a little coarser than those of Earliana. The vines are branching and fairly short, the tips ending in clusters of fruit or leaflets, thus giving it the name of “Topper.”

The fruits are produced possibly a few days later than Earliana, medium in size and globular or slightly flattened at the blossom end. Features of this variety which strongly appeal to canners, are its dark red interior, as well as exterior color, and its extreme solidity. Another strong point in its favor as a canning tomato, is its large yield of ripe fruit on rich soil over a short picking period. The Pritchard (Scarlet Topper) has a richer, deeper red internal color than Marglobe. Do not plant this variety on light, sandy nor poor soil. It is best grown on rich soil. The plants should be set closer in the row than other varieties with larger and coarser vines. In two State Agricultural Experiment Station tests during 1933 and 1934, our strain of Pritchard was the unanimous choice for first place by all the judges. In 1935, in a test at Penn State College, our Certified Pritchard produced the highest yield per acre of the 5 strains tested, the highest percentage of marketable fruits, and the largest average size of fruits.

C. Picked Certified—pkt. 16c oz. 86c ¼ lb. $2.75
Certified—pkt. 10c oz. 55c ½ lb. $1.75
Uncertified—pkt. 5c oz. 35c ¼ lb. $1.15

★ RUTGERS (CERTIFIED)—100 Days

This new tomato is the product of Prof. Schermerhorn of The New Jersey Agricultural Experiment Station. It was developed by crossing Marglobe with the J. T. D.

The Rutgers produces a rather large plant with thick stems and large leaflets, somewhat larger in all respects than Marglobe. On good, rich land, heavy applications of nitrogen should not be made, for Rutgers is a strong grower. The natural abundance of foliage serves as ample protection from sunscald of the fruits when light, sandy soils are used.

The fruits are somewhat larger than Marglobe, and about the same size as Break O’Day. Being larger than Marglobe, they tend to flatten out more than this variety, not being quite as globe-shaped. The external color is dark red. The internal structure is as good as our Marglobe or Break O’Day, having thick outer and inner walls, and very small seed cavities. The internal color is darker red than Marglobe.

It is claimed that the Rutgers makes juice of low acidity and fine flavor, intermediate between the sweet Marglobe and the very tart late varieties. It is a good canning tomato.

It is claimed Rutgers will yield as well as Marglobe, and on light, sandy soil will surpass this variety, since the vines offer more protection for the fruit. In 1933, in a test at Penn State College, our Certified Rutgers produced the highest marketable yield per acre of the 4 strains in the test, and the largest average size of fruits. In 1936, two growers in Bucks County produced over 10 tons per acre with Landreths’ Certified Rutgers.

C. Picked Certified—pkt. 15c oz. 85c ½ lb. $2.75
Certified—pkt. 10c oz. 55c ¼ lb. $1.75
Uncertified—pkt. 5c oz. 40c ¼ lb. $1.25

Certified Penn State (For description see Page 70)
TOMATO—Continued

PINK OR PURPLE VARIETIES

Dwarf Champion—110 Days. This is a late tomato of the dwarf or upright type. The plants have the habit of growth of peppers or eggplants rather than tomatoes. The foliage is dark green, the leaves large and broad like those of the potato. Because of the habit of growth, the plants may be set closer in the row and in rows closer together than ordinary varieties of tomatoes. The fruits are small to medium size, purple or pink in color and flattish round in shape. Pkt. 5c oz. 45c ¼ lb. $1.50

June Pink—90 Days. Is a pink Earliana—see Earliana for description. Pkt. 5c oz. 45c ¼ lb. $1.50

Glovel—100 Days. Called a Pink Marglobe. A new U. S. Dept. of Agriculture tomato created by crossing Pink Globe with Marvel. Medium sized, globular pink fruits on a medium sized vine. Pkt. 5c oz. 70c ¼ lb. $2.25

Certified Rutgers (For description see Page 71)

LIVINGSTON'S GLOBE, LANDRETHS' STRAIN—100 Days

This variety has a large, coarse vine which protects the fruit from sunscald. The fruits are globular when small, becoming slightly flattened and very large when mature. Our strain of this variety is a distinct improvement on the old Pink Globe variety, in fact our opinion is that Landreths’ strain of Livingston’s Globe tomato can take the place of any of the old pink or purple varieties now grown. Try it.

C. Picked Certified—pkt. 15c oz. 85c ¼ lb. $2.75

Certified—pkt. 10c oz. 55c ¼ lb. $1.75

Uncertified—pkt. 5c oz. 35c ¼ lb. $1.15

Oxheart—118 Days. This is a very late tomato with long, thin vines and light foliage, extremely spreading in habit. The fruits are purple or pink in color, enormous in size, the shape of a beef heart, and with such a solid internal structure that there is very little room left for seed. Will not produce over 3½ lbs. of seed to a ton of fruit. The flavor is very mild and sweet which is preferred by some people to the more acid flavors.

Pkt. 5c oz. 70c ¼ lb. $2.25

Ponderosa or Brimmer—115 Days. The foliage of this variety is large and very spreading. The fruits are purple or pink in color, very large and flattish round in shape, somewhat irregular and a rough exterior. Some call this variety “Beefsteak,” while others use the same name for the Crimson Cushion, a red, large-fruited, flat variety. Since the internal structure is very solid, Ponderosa is favored by many as a home garden variety.

Pkt. 5c oz. 55c ¼ lb. $1.75

YELLOW VARIETIES

Golden Queen or Trophy—100 Days. The foliage of this variety is similar to Ponderosa. The fruits are medium to large in size, flattish round in shape, and a golden yellow color. If one prefers a mild, sweet flavored tomato, this is just the variety for them.

Pkt. 5c oz. 45c ¼ lb. $1.50

Pear Shaped Yellow—100 Days. Small yellow fruit shaped like a pear. Pkt. 5c oz. 45c ¼ lb. $1.50

Plum-Shaped Yellow—100 Days. Same as plum-shaped red in every particular except in color. Used in pickling in whole form.

Pkt. 5c oz. 45c ¼ lb. $1.50

APHIDS (OR PLANT LICE) ON TOMATOES

A good control results from using 1 to 1½ Teaspoonfuls of Nicotine Sulphate (or Black Leaf 40) to 1 gallon of water plus soap flakes as a spreader. Nicotine Dust can be used if preferred.

1 oz. 35c 5 ozs. $1.00 1 lb. $2.25
Native probably of Great Britain and Northern Europe. Four Ounces of Seed Will Sow 100 Yards of Row. Three Pounds Will Sow an Acre. Matures for Table 60 to 90 Days, According to Variety and Season. Breaks ground in 4 days. One inch high in 8 days under most favorable circumstances in greenhouse.

The only hope of a successful Spring crop is in an early start, as otherwise the period of maturity extends into hot weather, when the bulb becomes fibrous and pungent. Midsummer and early Autumn are the seasons for the most successful Turnip drilling to obtain good roots for Winter use.

**WHITE FLESHED Sorts**

**Cow Horn or Long White Green Crowned—80 Days.** This variety is a pure white, except a dash of green in the crown. Cut leaf. It is a large cropper. Roots sometimes 15 inches long. In shape it is very much like a long carrot, only it is blunt at the point and very often has a slight crook.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

**Cow Horn Red Crowned—80 Days.** This is identical to the Green Crowned except that the crown is red. Flesh is tender and mild in flavor.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

**Early Flat Red or Purple Top Strap Leaf—50 Days.** This is a very early flat strap leaf Turnip with a red or purple crown. Used for cattle feeding and extensively for the table. Root flat, about 2 inches in diameter, flesh white. Not equal to the Red Top Globe. Listed by us over 100 years ago.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

**Early Flat White Dutch—50 Days.** This Turnip is very early and resembles the Early Flat Red or Purple Top in most respects except that the roots or bulbs are all white. Tops small and strap leaf. Listed by us over 100 years ago.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

**Extra Early Red or Purple Top Milan—40 Days.** This and the White Milan are the earliest Turnips in cultivation. Similar but earlier than Purple Top Strap Leaf.

Pkt. 5c oz. 10c ½ lb. 20c lb. 60c

**Extra Early White Milan—40 Days.** This is identical with the Red Top Milan, except in the color of the top. It is used quite extensively for forcing. Similar but earlier than the White Flat Dutch.

Pkt. 5c oz. 10c ½ lb. 20c lb. 60c

**Jersey Lily—65 Days.** Very similar to White Egg, but longer, and not so early; flesh of excellent quality.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

**LANDRETHS' SOUTHERN SNOW WHITE GLOBE—80 Days.** Color pure white, shape round, size large, solid, quick in its growth for a large Turnip. Produces a great tonnage to the acre. We recommend this to stock breeders for early feeding, also for sowing at seasons too late to plant Rutabagas.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

**Large Early Red or Purple Top White Globe—60 Days.** This is a large sized, rapid grower, attractive in appearance and admired by all. Purplish red above ground, bulbs large, two thirds white, globe shaped, smooth with a fine top root, fine grained flesh. The roots when about 2 to 3 inches in diameter, are the best size for edible condition. This is the most popular, most largely used of all varieties.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

**Shogoin or Japanese Foliage—55 Days.** This is a decided acquisition to both the Turnip and the Greens classes. It produces an abundance of tender delicately flavored leaves, and later a full crop of very tender Turnips, closely resembling Early White Flat Dutch. It is a very rapid grower. The leaves as greens, being ready fully as early as any of the Turnips for greens. After the leaves are cut the roots form rapidly, reaching maturity almost as early as Flat Dutch and Purple Top Strap Leaf.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

**Pomeranian White Globe—70 Days.** Shape round, size large, solid, pure white, smooth, quick in growth for a large turnip, producing a large weight. Very productive; often 30 to 40 tons to the acre; used extensively for stock feeding, as well as for the table; popular in the South.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

**White Egg—60 Days.** A sort forming oval roots the shape of an egg, in an incredibly short period after sowing. Roots are medium size, flesh very white, firm and sweet. Usually about 2 inches in diameter and 3 inches long when fit to eat.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c
TURNIP—Continued

YELLOW FLESHED VARIETIES

Aberdeen or Yellow Scotch—70 Days. This Turnip is highly recommended for cattle. Roots yellow with green top, flesh yellow. It is a ranker grower and coarser and later than the Amber Globe which we offer, but we recommend it most highly for dairy purposes. Listed by us over 100 years ago.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

AMBER GLOBE GREEN CROWNED—70 Days. This we introduced in 1863 and it is almost indispensable in every household. It is a vigorous, free grower, valuable for both table and cattle feeding, productive and an excellent keeper. We can say without hesitancy it is the best yellow fleshed Turnip on the market today. Roots are large with green tops and globular shaped. The skin is yellow, except at the top, which is green. The flesh is light yellow, of fine texture and very sweet, and when cooked more closely resembles Rutabaga than any other Turnip on the market.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

Amber Globe Red Crowned—70 Days. A Bloomsdale selection from the older Green Crowned Amber Globe. The same in every respect as the Green except it has an outside red crown and for this reason it is preferred by some market gardeners, as they like its appearance in the basket.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

Golden Ball or Orange Jelly—60 Days. Cut leaved, small tops, an excellent fine-texture, smooth-skinned, early orange and yellow fleshed variety. Desirable for the Home Garden.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

RUTABAGA

BLOOMSDALE SWEDE—90 Days. The Bloomsdale Swede is the parent of all neckless Rutabaga, called by some Improved Long Island Swede, quite wonderful in its fine breeding. It is a yellow globular or ovoid shaped Rutabaga, large size, the finest texture and flavor, a rich, creamy yellow, with a purple top, and absolutely free of neck—a good keeper. Undoubtedly the best of the Rutabagas.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

Budlong Breadstone or Sweet German—90 Days. A white fleshed Rutabaga, is stump rooted, fibrous outside; very hardy; a long keeper.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

LANDRETHS’ IMPROVED PURPLE TOP YELLOW FLESHED or Long Island Swede—90 Days. A hardy, oval-rooted sort, a heavy cropper. Flesh yellow, with a purple crown. Grown largely by market gardeners for table use.

Pkt. 5c oz. 10c ½ lb. 20c lb. 50c

LANDRETHS’ PARTICULAR—90 Days. This remarkable stock is grown by us on our Bloomsdale Farm. It is absolutely free from neck, solid, sweet, tender, with a good purple top, excellent yellow flesh, and a fine shaped bulb. The gem for Market Gardens.

Pkt. 5c oz. 45c ½ lb. $1.50 lb. $5.00

WINTER TURNIPS FOR GREENS

Dixie Land—50 Days. A form of Turnip for winter greens. Produces large foliage of light blue-green color. An exceedingly good variety. The roots, however, are not good for eating, only the tops being used.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c

Seven Top or Southern Prize—50 Days. This Turnip is used entirely for greens and salad. It may be left standing in the open ground during Winter as far north as Philadelphia. In the Spring in the Southern State it yields an abundant foliage for boiling with cured meat and is in much demand. It is principally cultivated in the Southern States and is a great favorite as greens for stock. It is very hardy.

Pkt. 5c oz. 10c ½ lb. 15c lb. 45c
COMPLETE FLOWER GARDENS FOR THE SMALL PROPERTY

**These** collections contain individual packets of seeds, carefully selected to grow in color harmony with each other on a small property. Each is the latest easy-to-grow strain of its type. The colors are predominantly clean reds, whites, blues, and yellows. Enough seeds of each flower are provided to plant 40-foot rows. Accompanying each packet you will find planting instructions.

These collections cannot be altered. Please do not ask us to do so—

FLOWERS FOR SPECIAL USES

We have many varieties which, for lack of space, are not listed—Ask for what you don’t see.
HINTS ON FLOWER SEED SOWING

Below we give suggestions for starting flower seeds without the aid of a greenhouse. Under each heading of flowers which we list, is given a “key number” referring to the following instructions. While the information given is fairly complete, we suggest that additional study be spent on all available gardening books and magazines, for it is only by a true understanding of the requirements of plants, that the keenest pleasures of gardening may be realized.

The soil best adapted to the greater variety of garden flowers is a deep rich loam. If the soil is too adhesive, it may be loosened by the addition of sand or sifted coal ashes. When preparing to seed, be sure to have the soil very well pulverized, and as level as possible.

1. Sow in the place where the plants are to stand. Be sure that soil where seeds are to be sown is thoroughly loosened to a depth of several inches, and well leveled. The average seed should be covered about twice its own greatest thickness, though very small seeds like Petunia should not be covered at all, but merely pressed into the earth with a board, and then covered with newspaper. Watering should be done through the newspaper, to prevent washing out the seed, but after sprouts appear in reasonable numbers, the paper should be removed, so that the young seedlings may have light and air. Watering should be done carefully, and the soil should not be allowed to dry out, but on the other hand, excessive water may rot the unsprouted seeds, and cause “damping-off” of seedlings. After plants have grown their second pair of leaves, they should be thinned out to avoid crowding. Distance between being governed by the ultimate size of the plant. Extra plants can usually be transplanted to other situations.

2. Start in open air seed bed and transplant. The surface of the seed bed should be raised slightly above the adjoining ground, so that during storms washing-out will not occur. It might be well to place bricks or boards in the form of a curbing around the plot to further assist. A sunny situation is best for the seed bed, though after the young sprouts appear, during very hot days it may be necessary to shade them with a cloth spread over short sticks. Sowing and watering are to be done as suggested in 1 above.

3. Sow in flats or pots or pans in open air or in a cold frame. This procedure is best followed with slow-germinating subjects, such as various wildings and rock plants, some of which may take from six months to a year or more to germinate. Use an earthenware flower pot or pan, or a low shallow box known as a “flat.” This is best. After seedlings have made their second pair of leaves, they should be transplanted to other containers to avoid crowding, or if weather is warm enough, they could be moved outdoors.

4. Plant indoors in flat, pot or pan. This method is effective when there is a sunporch or window facing South, so that there is sunlight most of the day. Use an earthenware flower pot or pan, or a low shallow box known as a “flat.” Into this put a potting soil such as described in 3, firm the soil, and plant the seed in rows, being sure to mark each row for easy identification. When watering, set the container in water, allowing it to soak up sufficient from the bottom to thoroughly moisten the soil. Container should be put in a dark place, and covered with wet newspaper until seeds sprout, when it should be brought into the light. Do not allow soil to dry out. This can best be accomplished by covering container with glass to stop evaporation. When moisture collects on the glass, lift glass to allow air to circulate during the sunny part of the day. A temperature range of 50 degrees at night and 70 degrees during the day is best. After seedlings have made their second pair of leaves, they should be transplanted to other containers to avoid crowding, or if weather is warm enough, they could be moved outdoors.

5. Start in hot bed or cold frame. It is best to sow flower seeds (because of their small size) in flats to be placed in the frame, rather than directly in the frame itself. If a hot bed, care should be taken that the temperature has dropped to at least 90 degrees before sowing. Soil should not be allowed to dry out, and on a warm sunny day, the sash should be raised to allow ventilation, for overheating causes a thin, leggy growth. After plants have made their second pair of leaves, they should be shifted to other flats and spaced about 2 inches apart each way, to allow adequate root systems to develop. If the season has advanced far enough, they can be planted directly outside.

As a general rule, plants of all kinds are best transplanted from the seed-bed and into their permanent locations during wet rainy weather. Most failures with flowers are caused by either too deep planting of the seed, or careless transplanting at the time of moving to permanent beds.
In presenting our 1937 List of Flower Seeds, we offer what we consider the very best and most popular varieties, including a number of novelties. Our seeds are grown by the most painstaking methods, and no trouble or expense is too great for us to take, to insure our customers the finest of domestic and foreign grown seeds. We are devoting particular attention to the Flower Seed Department, and are constantly striving to give prompt, helpful, and intelligent service.

We wish to particularly call attention to our strains of Phlox Drummondii and Zinnia, which we feel are unsurpassed by those of any seedsman. The Zinnia was first introduced to this country by Landreth, who, more than 100 years ago, found it growing in a wild-state in Mexico, and listed it in an early catalog. The present large-flowering Zinnia is the descendant, in modern dress, of its humble great, great grandfather, which was of the small single type, now so rarely seen.

Our Flower Seeds are continually tested for germination, in soil in our greenhouses (which is the only sure way) and planted outdoors in our Experimental Gardens each year to “check” on trueness to type, habit of growth, purity of strain, etc. We are constantly testing new varieties, and whenever we find anything which to us seems of particular merit, are anxious to tell our friends about it.

Space limitations prevent the listing of all varieties which we are able to supply, only the better-known sorts being included here. If you can’t find what you need, write us, and the chances are that we can supply it from stock, or at all events obtain it very promptly from the growers of the particular strain desired.

Varieties marked with • supplied in plain packets only

Symbols denote:  □ Annual  ○ Perennial  × Biennial

\[\text{Imperial Semi-Dwarf White}\]
\[1/2 oz. 15 pkt. 10\]

\[\text{Imperial Semi-Dwarf Blue}\]
\[1/2 oz. 15 pkt. 10\]

\[\text{Imperial Semi-Dwarf Mixed}\]
\[1/2 oz. 15 pkt. 5\]

\[\text{Blue Ball—Dwarf, ball-shaped plants. Large flowered and very compact. Best for edging.}\]
\[1/2 oz. 15 pkt. 10\]

\[\text{Blue Perfection—Compact, very large-flowered variety. The darkest sort grown from seed.}\]
\[1/2 oz. 15 pkt. 10\]

\[\text{ALKANET—See Anchusa}\]

\[\text{ATHERATM} \]

\[\text{ACHILLEA (Sneezewort, Yarrow)}\]
Culture 1. Set out Aug. Normal germination, 10-15 days

\[\text{The Pearl—Splendid perennial for cutting. Bears clusters of double satín-white flowers during a long season. Does best in a sunny situation. 2 feet. Rather difficult to germinate. A native of Great Britain.}\]
\[1/2 oz. 65 pkt. 15\]

\[\text{AGERATUM}\]
Culture 4 or 5. Normal germination, 5-8 days

\[\text{Makes a very pretty border: fine for carpet bedding, basket, pot plants. Blooms June to November. Sow where wanted to bloom. Native to Western Asia.}\]

\[\text{Sweet (Maritimum)}\]
\[□—White-8 to 12 inches. Trailing habit, very sweetly scented, a hardy annual.}]
\[1 oz. 65 1/2 oz. 40 \frac{3}{4} oz. 25 pkt. 10\]

\[\text{Raxalll Compactum} \]
\[□—Perennial, known also as "Basket of Gold." In late spring, is covered with golden flowers. Excellent for rockeries.}\n\[1/2 oz. 40 pkt. 10\]

\[\text{Benthami Procumbens} \]
\[□—Very dwarf creeping habit. Best for edging that we have ever grown.}\n\[1/2 oz. 25 pkt. 10\]

\[\text{Luteescens} \]
\[□—Dwarf creamy yellow.}\n\[1/2 oz. 25 pkt. 10\]

\[\text{Lilac Queen Improved} \]
\[□—Distinct variety with lilac-tinted flowers.}\n\[9 inches.\]
\[\frac{3}{4} oz. 40 pkt. 10\]

\[\text{AMARANTHUS} \]
Culture 1 or 2. Normal germination, 5-10 days

\[\text{Annuals, with brilliant foliage, growing best in soil with plenty of lime, and in sunny position.}\]
AMARANTHUS □ Continued

Caudatus (Love-Lies-Bleeding) .... pkt. 5
Tricolor (Joseph's Coat) .... pkt. 10
All Kinds Mixed .... pkt. 5

ANCHUSA □

Normal germination, 30 days

Italica, Dropmore Variety □—A most satisfactory perennial with rough green leaves, bearing large numbers of deep blue flowers on branching stems. Should be in every garden. Believed to be of Italian origin. Culture 3.

Italica, Lisadel □—An improved form with strong, vigorous growth and extra large gentian-blue flowers. 5 feet tall. Culture 3.... pkt. 15

Myosotidiflora □—Light blue and graceful, this hardy 12-inch plant is ideal for rock-gardening or borders. Culture 3.... 50 seeds 35

Capensis □ (Summer Forget-Me-Not) □—Gentian-blue flowers from July to October. 2 feet. This variety deserves to be better known. Culture 1.... 1/4 oz. 20 pkt. 5

ANNUAL SURPRISE GARDEN MIXTURE □

Culture 1. Normal germination, 8-12 days

A choice blending of many annual flowers and is ideal to brighten an otherwise corner. This mixture is not made from old seed, as are so many mixtures. May be sown broadcast, or in rows, and is so balanced as to give bloom all season. Excellent for children's gardens.

lb. 2.00 1/2 lb. 1.25 pkt. 5

ANTIRRHINUM (Snapdragon) □

Culture 4 or 5. Normal germination, 8-12 days

An exquisite tender perennial, living for a second and third year, but best treated as an annual, blooming in July if sown early and then on until killed by frost. By cutting off most of the flowering stems and giving a slight protection over winter, plants will bloom second summer for three months. As a cut flower, Snapdragon retains its fresh appearance for 4 or 5 days, and in this particular is very valuable for table decoration. A development of a genus known as Serophila, which is native in both Eastern and Western Hemispheres.

Majus Golden King, 2 ft. .... 1/4 oz. 45 pkt. 10
Majus Scarlet Cardinal, 2 ft. .... 1/4 oz. 45 pkt. 10
Majus Queen Victoria—White, 2 ft. .... 1/4 oz. 30 pkt. 10
Majus Harmony—Terra Cotta Orange, 2 ft. .... 1/4 oz. 65 pkt. 10
Majus Rose Queen, 2 ft. .... 1/4 oz. 45 pkt. 10
Majus Mixed, 2 ft. Red, Rose, Yellow, Scarlet, etc. .... 1/4 oz. 30 pkt. 10

(For Forcing or Outdoor Use—3 feet)

Tall Maximum Copper King .... 1/4 oz. 90 pkt. 15
Tall Maximum The Rose .... 1/4 oz. 90 pkt. 15
Tall Maximum Canary Bird .... 1/4 oz. 65 pkt. 15
Tall Maximum Snowflake .... 1/4 oz. 65 pkt. 15
Tall Maximum Mixed .... 1/4 oz. 50 pkt. 10
Semi-Dwarf Mixed—Rose, Yellow, White, etc. 18 in. .... 1/4 oz. 30 pkt. 10

Rust Proof Univ. of California Strain Mixed—Awarded Certificate of Honor by "All-America Selections Committee" for 1935. The plants are 75% rust-proof, and the strain is invaluable where conditions of rust prevail. .... 1/4 oz. 70 pkt. 10

AQUILEGIA (Columbine)

Culture 3. Normal germination, 12-60 days

Among the most beautiful and curiously formed of hardy perennial old fashioned flowers. Blooms in the early spring and summer for 60 days. Foliage very attractive. Will thrive almost anywhere, but prefers partial shade and moisture. Splendid for cutting. 21/2-3 feet. Native both to Europe and America.

Vulgaris, Single Mixed .... 1/4 oz. 30 pkt. 5

Chrysantha (Golden Spur) .... 1/4 oz. 40 pkt. 10
Mrs. Scott-Elliot's Hybrids, Mixed—The best of the Columbines, having extremely long spurs, and embracing blues, lavenders, pilodes, mauves, reds, pink, purples, lavenders, and creams. Two or more colors in the same flower-head .... 1/2 oz. 40 pkt. 25

Long Spurred Silver Queen .... 1/4 oz. 45 pkt. 25
Long Spurred Pink Shades .... 1/4 oz. 45 pkt. 25
Long Spurred Blue Shades .... 1/4 oz. 45 pkt. 25

ARABIS □

Culture 3. Set out Aug. Normal germination, 10-20 days

Alpina—(Rock Cress) 6 inches. Charming white flowering perennial, doing well in any soil, and needing only plenty of sun. Native of the Alps. .... 1/4 oz. 20 pkt. 10

ARCTOTIS □

Culture 4 or 5. Normal germination, 15-20 days

Grandis—(Blue-Eyed African Daisy)—Long stems and good keeping qualities make this an excellent cut flower. Petals white with steel-blue center. 2 feet. Better start indoors. .... 1/4 oz. 20 pkt. 10

Hybrids—Shades of red and orange. .... 1/4 oz. 1.15 pkt. 25

FLOWERS FOR TROPICAL CLIMATES

Many of our Foreign Customers have asked us to prepare a list of varieties most popular in warm climates, which we herewith take pleasure submitting:

Antirrhinum Gaillardia Nasturtium
Aster Geranium Pansies
Balsam Gomphrena Petunia
Calliopsis Hollyhock Phlox
Colonia Marigold Poppy
Coreopsis Myosotis Sunflower
Dahlia Mignonette Zinnia
Dianthus—All kinds

A large number of annuals may be planted in the Fall, rather than waiting for Spring. There is a double advantage in this plan, for not only does it save work in the busy season, but it gives the plants a very early Spring start. Annual varieties which will "winter" safely in most sections from Fall sown seed are: Centaurea, Poppy, Petunia, Calendula, Moonflower, Antirrhinum, Alyssum, Nicotiana, Gypsophila, Cynoglossum, Larkspur, Annual Lupinus, Calliopsis, Euphorbia, Kochia, Eschscholzia, Candytuft, etc. It is best to protect the seed bed with litter during the Winter, so that heavy rains will not wash any unsprouted seeds out of their regular rows before they sprout the following Spring.
and interlaced. Blooms midsummer. 2 feet. Wilt resistant.

Crimson .................................. ½ oz. 30 pkt. 10
Lavender or Light Blue .................. ½ oz. 30 pkt. 10
Purple or Dark Blue ..................... ½ oz. 30 pkt. 10
Rose ........................................ ½ oz. 30 pkt. 10
Shell Pink .................................. ½ oz. 30 pkt. 10
White ........................................ ½ oz. 30 pkt. 10

Balsam (Ladyslipper) □
Culture 1, 4, or 5. Normal germination, 8-10 days
Beautiful annuals with flowers as double as Roses, measuring two inches in diameter. Rich soil and deep culture in a sunny position are requisite to produce large flowers. Seeds may be sown indoors early, transplanting the seedlings to flats, and later thinning out the plants; but if started indoors they will flower earlier. Set plants about 2 feet apart, where they can have plenty of sun. Our stock is exceptionally fine. In bloom 60 days. If foliage obscures flowers, it can be cut away with tufted center of short florets of light yellow. Distinct and most attractive. 2½ feet. ½ oz. 35 pkt. 15
BABY'S BREATH—See Gypsophila.

BACHELOR'S BUTTON—See Centamea.

BALSAM (Ladyslipper) □
Culture 1, 4, or 5. Normal germination, 8-10 days

VARIETIES MARKED WITH • SUPPLIED IN PLAIN PACKETS ONLY

Calendula Chrysantha —“Sunshine”

BEARDTONGUE —See Pentstemon.

BELLIS—See Daisy Double.

BLANKET FLOWER —See Gaillardia.

BLACK EYED SUSAN —See Thunbergia.

BLUE LACE FLOWER—See Didiscus.

BRACHYCOME □

Culture 1, 4, or 5. Normal germination, 10 days

[Negativa (Negativa)] —Winner of Gold Medal in “All-America” competition in 1935. Fringed and lacinulated petals of deep orange. Mixed $\frac{1}{2}$ oz. 15 pkt. 10

Orange King —The best bright orange. 1 oz. 25 pkt. 10

Lemon Queen —Good clear lemon. 1 oz. 25 pkt. 10

(NEW) Chrysantha (Sunshine)—Awarded a Gold Medal by the “All-America Selections Committee” for 1934. Originating in Australia, this flower has wide and loosely arranged petals, incurved at center, and reflexed at edges, somewhat like a chrysanthemum. The long-stemmed clear buttercup-yellow blooms are 4 inches across. Plants 30 inches tall. $\frac{1}{2}$ oz. 20 pkt. 10

Ball’s Apricot —Lovely color. $\frac{1}{2}$ oz. 25 pkt. 10

Metcal —Most attractive creamy white, striped with orange, and should be better known. 1 oz. 25 pkt. 10

California Poppy —See Eschscholzia.

CAMPANULA or CANTERBURY BELLS ×

Culture 3. Set out Aug. Normal germination, 10–15 days

The Canterbury Bells are a large genus of showy plants, blooming in profusion. Easy of culture and certain to flower; succeeds well in good soil. Blooms second year. 2–3 feet. Native throughout the Northern Hemisphere.

Calycanthema (Cup-and-Saucer) Mixed—Large cup-shaped bells, surrounded by a calyx resembling a saucer, and giving effect of being double. $\frac{1}{2}$ oz. 30 pkt. 10

Medium Single Mixed—Large hanging bell-like flowers, in shades of blue, pink and white. $\frac{1}{2}$ oz. 55 pkt. 10

Pyramidis Blue (Chimney Bellflower)—Beautiful blue flowers on 5 foot stalks. They like a warm well-drained situation. Blooms August and September. $\frac{1}{2}$ oz. 35 pkt. 10

Pyramidis Mixed (Chimney Bellflower).

Annual Single Mixed —Blooms from seed in less than 6 months. All-America Gold Medal 1933. $\frac{1}{2}$ oz. 35 pkt. 10

CANDYTUFT (Iberis)

□

Culture 1, 4, or 5. Normal germination, 5–10 days

These well-known favorites are among the most beautiful of our annual flowers. The seeds can be sown at all seasons or in Fall for early flowering. They like rich soil and plenty of room to flower freely. Very pretty in masses. Bloom 60 days. 1 foot. Does not transplant readily. Originally a native of the Mediterranean region.

Coronaria Uyaciuth Flowered White —A superb variety; large flowers on good stems. 1 oz. 25 pkt. 10

• Corolla White. 1 oz. 35 pkt. 10

• Umbellata Crimson. 1 oz. 35 pkt. 10

• Umbellata Flesh Pink. 1 oz. 30 pkt. 10

• Umbellata Mixed. 1 oz. 35 pkt. 10

Iberidifolia Mixed —Swan River Daisy. A rather uncommonly grown plant, which should be better known. 10 inches. Blue, white, rose, violet flowers resembling small cinerarias. Use for seedings. Indigenous to Australia. $\frac{1}{2}$ oz. 45 pkt. 10

• Blue, with yellow center. $\frac{1}{2}$ oz. 45 pkt. 10

BROWALLIA □

Culture 1, 4, or 5. Normal germination, 5–10 days

Eleta Mixed—A fine bedding plant of free growth, blooming during Summer and Autumn, and producing star-shaped flowers of blue and white. 1 foot. Makes a good house-plant. Native of Tropical America. $\frac{1}{2}$ oz. 20 pkt. 10

BUGLOSS—See Anchusa.

CALENDULA or POT MARIGOLD □

Culture 4 or 5.

Normal germination, 5–10 days

Bushy plants with dense green foliage, surrounded with disc-like double flowers. If cut regularly, will bloom all Summer, and well into the fall. Thrives even in poor soil, provided seed-pods are removed after blooming. 12–18 inches. Does not transplant easily. Is native from Canary Islands to Persia.

Mixture Double—Yellow and orange shades. 1 oz. 30 pkt. 5

Landreths’ Pastel Redding Mixed—Designed especially for the home garden, this mixture of dwarf types has many new shades of apricot, cream and white, as well as the better-known orange and lemon. Adapted to border use, but stems are long enough for cutting. $\frac{1}{2}$ oz. 15 pkt. 10

Campfire (Sensation) —Large flowers of rich orange, with a scarlet sheen. $\frac{1}{2}$ oz. 20 pkt. 10

NEW) Orange Shaggy —Winner of Gold Medal in “All-America” competition in 1935. Fringed and lacinulated petals of deep orange. $\frac{1}{2}$ oz. 15 pkt. 10

Orange King —The best bright orange. 1 oz. 25 pkt. 10

Lemon Queen —Good clear lemon. 1 oz. 25 pkt. 10

California Poppy —See Eschscholzia.

BROWALLIA □

Culture 1, 4, or 5. Normal germination, 5–10 days

Eleta Mixed—A fine bedding plant of free growth, blooming during Summer and Autumn, and producing star-shaped flowers of blue and white. 1 foot. Makes a good house-plant. Native of Tropical America. $\frac{1}{2}$ oz. 20 pkt. 10

Bugloss—See Anchusa.

CALENDULA or POT MARIGOLD □

Culture 4 or 5.

Normal germination, 5–10 days

Bushy plants with dense green foliage, surrounded with disc-like double flowers. If cut regularly, will bloom all Summer, and well into the fall. Thrives even in poor soil, provided seed-pods are removed after blooming. 12–18 inches. Does not transplant easily. Is native from Canary Islands to Persia.

Mixture Double—Yellow and orange shades. 1 oz. 30 pkt. 5

Landreths’ Pastel Redding Mixed—Designed especially for the home garden, this mixture of dwarf types has many new shades of apricot, cream and white, as well as the better-known orange and lemon. Adapted to border use, but stems are long enough for cutting. $\frac{1}{2}$ oz. 15 pkt. 10

Campfire (Sensation) —Large flowers of rich orange, with a scarlet sheen. $\frac{1}{2}$ oz. 20 pkt. 10

NEW) Orange Shaggy —Winner of Gold Medal in “All-America” competition in 1935. Fringed and lacinulated petals of deep orange. $\frac{1}{2}$ oz. 15 pkt. 10

Orange King —The best bright orange. 1 oz. 25 pkt. 10

Lemon Queen —Good clear lemon. 1 oz. 25 pkt. 10

California Poppy —See Eschscholzia.
CALMOS (Seeds only)
Culture 4 or 5. Normal germination, 5-90 days

CANNAS (Seeds only)
Culture 4 or 5. Normal germination, 3-60 days
Half-hardy perennial plants with broad foliage, of tropical appearance; produce a striking effect grouped in beds or singly on the lawn. 3 feet. Soil the seed in warm water about 1 inch deep. Cover the outer shell, sow in hot-bed, transplant when ground is warm; give plenty of moisture and rich soil. Take up the roots before frame and keep in a moderately warm cellar. These plants are native in tropical and subtropical countries.

Crozy’s Early Newest Large Flowering Mixed. 2 to 3 feet tall. 1 oz. 40
CARDINAL CLIMBER
Culture 1 or 2. Normal germination, 10-20 days
Excellent climber growing 25 feet under unfavorable conditions. Cardinal Climber, in its popular form, cover the vine from July until frost. Sun and a rich soil necessary. 1 oz. 50 pkt.

CASTOR BEAN or RICINUS
Culture 1 or 2. Normal germination, 10-12 days
The Castor Bean, in all its varieties, has a showy tropical appearance, singly or in groups. Valuable for screens, a tender annual. Combines well with Cannas or Dahlias. Ricinus is a native of the East Indies and Tropical Africa.

Sanguineus—Red stalks and green foliage, with bronze tinge, seed-pods scarlet. 10 feet. 1 oz. 20 pkt. 10
Zanzibaranls—Largest-leaved variety, an elegant center plant. Leaves often 2 feet across. 12 feet high. 1 oz. 30 pkt. 10
Mixed, All Varieties. 1 oz. 20 pkt. 10
CATNIP—See Nepeta.

CELOSIA or COCKSCOMB
Culture 4 or 5. Normal germination, 8-10 days
The Cockscombs are tender annuals, requiring good soil. The plant will produce a larger bloom by cutting off side flowers and leaving one head only to a plant. If cut before maturing the heads may be preserved during winter. A native of many warm regions.

Golden Queen—Plume type. 1 oz. 20 pkt. 10
Crimson Plume. 1 oz. 20 pkt. 10
Thompson Magnifica Plumosa Mixed—Plants 3 to 4 feet high, sending up excellently beautiful plumes 10 inches in length, 3 to 4 inches in diameter and far more delicate than the more formal Cockscomb. 1 oz. 40 pkt. 10
Childsl Flower (Chinese Wool Flower). 1 oz. 20 pkt. 10
Tagetes Erecta—Bright crimson flowers, 10 to 2 feet high. 1 oz. 20 pkt. 10
Cristata, Dwarf Mixed—4 or 5 colors. 1 foot high. Combs 10 inches. 1 oz. 20 pkt. 10

CENTAURIA
BACHELOR’S BUTTON
Culture 1 or 2. Normal germination, 8-10 days
The Centaurea is particularly well adapted for border work, and is also of value for cutting. Sow where wanted to bloom, as seedlings do not transplant readily. Very easy to grow and will self-sow freely. 2 feet. Our strain of Double Blue, is superb. These are prevailing Old World plants.

New Jubilee Gem—All-America Award of Merit for 1937. Superb English dwarf bushy type, not over 12 inches tall. A graceful plant of easy culture, with fine-cut foliage. Double Mixed. 1 oz. 15 pkt. 6
Golden Queen—Plume type. 1 oz. 20 pkt. 10
Cyanus, Double Crimson. 1 oz. 20 pkt. 10
Cyanus, Double Rose. 1 oz. 20 pkt. 10
Cyanus, Double White. 1 oz. 20 pkt. 10
Cyanus, Double Mixed. 1 oz. 20 pkt. 10
Imperialis, Mixed (Sweet Sultan) Larger than usual Centaureas; colors, blue, white, pink and yellow. 18 to 24 inches. 1 oz. 20 pkt. 10
Candidissima ‘Dusty Miller’—Foliage finely cut and of silver-gray color. For bedding and borders only. 1 oz. 30 pkt. 10

CYPRESS VINE (Ipomoea quamoclit)
Culture 1 or 2. Normal germination, 10-20 days
Among the most beautiful of annual running and twining vines, blooming from midsummer until frost. Star-like flower. Native in tropical America, and southern United States.

Quamoclit Mixed—White and crimson. Lace-like foliage; climbing 8 feet. 1 oz. 70 pkt. 10
Quamoclit Hybrid—See Cardinal Climber.
SEED-GROWN DAHLIAS ARE INTERESTING

DAHLIA (Seeds Only) 

Culture 1, 4, or 5. Normal germination, 10-20 days

A favorite for autumn flowering, blooming the first season from seed if started early. The flowers are so symmetrical and perfect and the range of colors so wide and varied that they will always be popular where display is wanted. Will produce many choice tubers, which should be dug after flowering, buried in dry sand, ashes or peat moss, and stored for the winter in a cool place. Seed-grown Dahlias and perfect and the range of colors so wide and varied that from seed if started early. The flowers are so symmetrical dwarf bedding. 18-24 inches y 0.1 oz. 45 pkt. 10

produce many choice tubers, which should be dug after bloom only about 2 weeks later than those grown from tubers. The Dahlia originally grew wild in Mexico.

Hybrid Show Double Mixed — An exceptional mixture of really fine seed, saved from prize-winning plants. 0.5 oz. 65 pkt. 10

Finest Single Mixed — Will produce brilliant flowers running through a wide range of striking colors. Fine for cutting. 0.5 oz. 45 pkt. 10

Coltiness Mignon Strain Single Mixed — Splendid for dwarf bedding. 15-24 inches. 0.5 oz. 45 pkt. 10

Unwin’s Semi-Double Dwarf Giant Flowered Mixed — 2 feet. Excellent color range, and fine form. 0.5 oz. 65 pkt. 15

DAISY, DOUBLE (Bellis monstrosa) 

Culture 3. Set out Sept. Normal germination, 8-10 days

The English Daisy is a dainty perennial Springtime plant. Fine for edging or border. Quite hardy in most situations, easy culture, requires shade. Flowers from April to June. Start seed in hot-bed. Should be planted in beds 6 inches apart to make best effect. Grows 8 inches tall. Native habitat Great Britain.

Improved Giant Double Pink. 0.5 oz. 60 pkt. 10

Improved Giant Double Red. 0.5 oz. 60 pkt. 10

Improved Giant Double Snowball. 0.5 oz. 45 pkt. 10

Improved Giant Double Chocolee Mixed 0.5 oz. 50 pkt. 10

DAISY, SHASTA — See Chrysanthemum.

DAISY, PAINTED — See Chrysanthemum.

DIANTHUS (Caryophyllus) 

(Carnation Types)

Culture 3, 4, or 5. Normal germination, 5-15 days. These old favorites are still as popular as ever. Rich soil will make bright flowers. Most of the varieties are fragrant. In the open garden most bloom the first Autumn. Need slight protection in cold weather. Believed to be a native of the Old World.

Carnation Chabauds

Splendid large double types, which more nearly resemble the florists’ carnation than any other variety. Sometimes 2½ inches across, 18 inches tall. Lime soil and full sun for best results. Start under glass for bloom the first season.

Sparkler — Cardinal Red 0.5 oz. 70 pkt. 15

Nero — Deep Crimson 0.5 oz. 70 pkt. 15

Renée Rose — Deep Rose 0.5 oz. 70 pkt. 15

Legion of Honor — Deep Salmon 0.5 oz. 70 pkt. 15

Jeanne Monis — White 0.5 oz. 70 pkt. 15

Marie Chabaud — Yellow 0.5 oz. 70 pkt. 15

Chabaud’s Giant Mixed 0.5 oz. 50 pkt. 10

Border or Open-Garden Types

The flowers are generally borne on long stems; seed can be sown under glass or in the open ground, and will flower the next summer.

Giant Grenadin Mixed — Early double. 18 inches 0.5 oz. 50 pkt. 10

Giant Grenadin Scarlet 0.5 oz. 50 pkt. 10

Perpetual Flowering Carnations

Giant Marguerite, Mixed Extra Large — A very vigorous class, suitable for garden and spesid for cutting. Sown as annuals in February on a gentle heat and transplanted to open ground as soon as possible after frost, will produce a profusion of flowers in five months after sowing. 50 to 75% of the plants being double and sweetly scented. Although usually treated as annuals, if given protection over winter, will bloom following spring.

Giant Marguerite, Mixed Extra Large 0.5 oz. 80 pkt. 10

Giant Marguerite, White 0.5 oz. 80 pkt. 10

DIANTHUS (Pinks) 

Plumarium Semperflorens or Clove Pink — Single and Double Mixed. The everblooming Hardy pink of our grandmothers’ garden. Mostly pinkish and flaked. Blooms first year. Mixed... 0.5 oz. 35 pkt. 10

China or Indian Pink — A very desirable type of single flower (Dianthus Hybridus), resembling the florists’ carnation than any other variety. Sometimes 2½ inches across, 18 inches tall. Lime soil and full sun for best results. Start under glass for bloom the first season.

Sparkler — Cardinal Red 0.5 oz. 70 pkt. 15

Nero — Deep Crimson 0.5 oz. 70 pkt. 15

Renée Rose — Deep Rose 0.5 oz. 70 pkt. 15

Legion of Honor — Deep Salmon 0.5 oz. 70 pkt. 15

Jeanne Monis — White 0.5 oz. 70 pkt. 15

Marie Chabaud — Yellow 0.5 oz. 70 pkt. 15

Chabaud’s Giant Mixed 0.5 oz. 50 pkt. 10

Border or Open-Garden Types

The flowers are generally borne on long stems; seed can be sown under glass or in the open ground, and will flower the next summer.

Giant Grenadin Mixed — Early double. 18 inches 0.5 oz. 50 pkt. 10

Giant Grenadin Scarlet 0.5 oz. 50 pkt. 10

Perpetual Flowering Carnations

Giant Marguerite, Mixed Extra Large — A very vigorous class, suitable for garden and spesid for cutting. Sown as annuals in February on a gentle heat and transplanted to open ground as soon as possible after frost, will produce a profusion of flowers in five months after sowing. 50 to 75% of the plants being double and sweetly scented. Although usually treated as annuals, if given protection over winter, will bloom following spring.

Giant Marguerite, Mixed Extra Large 0.5 oz. 80 pkt. 10

Giant Marguerite, White 0.5 oz. 80 pkt. 10

Chinese and Japanese Pinks

The Pinks or Picotees are free-flowering biennial plants, but best treated as annuals, that bloom the first summer, the plants being double and sweetly scented. The most striking Dianthus we have ever grown.

Chinese and Japanese Pinks

Plumarium Semperflorens or Clove Pink — Single and Double Mixed. The everblooming Hardy pink of our grandmothers’ garden. Mostly pinkish and flaked. Blooms first year. Mixed... 0.5 oz. 35 pkt. 10

Giant Grenadin Mixed — Early double. 18 inches 0.5 oz. 50 pkt. 10

Giant Grenadin Scarlet 0.5 oz. 50 pkt. 10

Annual Sweet William (Sweet Wilmesfeld) — A very desirable type of single flower (Dianthus Hybridus), with a Sweet William-like growth. Flowers, however, are much larger and brighter, and more unusually marked and flaked. Blooms first year. Mixed... 0.5 oz. 35 pkt. 10

DIANTHUS BARBATUS — See Sweet William.
**DELPHINIUM**

The Delphiniums are showy perennials. Very easy to cultivate and beautiful for borders. The foliage is dark green, much divided, throwing out to perfection the blossoms, which are terminal spikes of blue. Although hardy perennials, the plants will bloom the first Autumn if started early, and again the following Spring. All seed pods should be removed to encourage new bloom. A good deep, rich soil will make large flowers. Seed sometimes germinates slowly and irregularly, and seed-bed should be placed where it may remain undisturbed for at least 6 months. 2-6 feet tall. Believed to have been discovered in Siberia, though is native throughout the North Temperate Zone.

**Belladonna Improved (Cleveland Beauty)** —Clear Blue...

**Bellamosum** —Dark Blue...

**Gold Medal Hybrids, Finest Mixed**...

*NEW* Elatum "Iceberg" —Pure white, 20-inch spikes. First White Delphinium of the Elatum type to come true from seed. A great novelty. Strong, healthy growth...

**Wrexham Hollyhock Hybrids** —A beautiful blending of the world's most famous hybridist. Largest of all delphiniums, 5-6 feet tall, with enormous spikes.

**Chinensis Varieties** —Reach full development 1st season if planted early. Flowers are not in spikes, but instead in loose sprays along the branches. 2 feet. Very graceful effect.

**Digitalis (Foxglove)**

Culture 2 or 3. Set out in Sept.

Hardy perennials, easy culture, low for several years without care and having tall spikes of showy, curiously shaped flowers. Blooms second year. If 3 feet. Digitalis was first brought to America from Great Britain.

**Gloxiniflora Rose**...

**Gloxiniflora Purple**...

**Gloxiniflora White**...

**New Shirley Giant Hybrids Mixed**...

**English Daisy** —See Daisy Double.

**DIDISCUS (Blue Lace Flower)**

Culture 1 Normal germination, 20-35 days

Coerulescens —Dainty lavender-blue flowers from June to October. Excellent for bedding, and makes a splendid cut-flower. Sown where wanted to bloom. According to a Landreth Catalog of more than 75 years ago, the Didiscus is a native of Australia.

**Blue Fairy** —Light Blue...

**Blue Butterfly** —Dark Blue...

**Alba** —White...

**Mixed**...

**FOR ANNUAL DELPHINIUM** —See Larkspur.

**DIGITALIS (Foxglove)**

Culture 2 or 3. Set out in Sept.

Normal germination, 10-15 days

Hardy perennials of easy culture, low for several years without care and having tall spikes of showy, curiously shaped flowers. Blooms second year. 3 feet. Digitalis was first brought to America from Great Britain.

**Gloxiniflora Rose**...

**Gloxiniflora Purple**...

**Gloxiniflora White**...

**New Shirley Giant Hybrids Mixed**...

**ENGLISH DAISY** —See Daisy Double.

**DIMORPHOTHECA (African Daisy)**

Culture 4 or 5. Normal germination, 10-20 days

**Aurantica Hybrida Mixed** —Daisy-like flowers in pastel shades from pure white, blush, red, and sulphur to pastel shades of pink, salmon, and orange. A plant of wide native distribution, but mostly in the Western Hemisphere.

**Orange Flame** —Reddish-orange, of great merit.

**Crimson**...

**White**...

**Double Choice Mixed** —This form is very beautiful, and is about 60% double.

**EVENING PRIMROSE**

Culture 4. Normal germination, 10-15 days

**Oenothera Lamarckiana** —Showy and beautiful plants for borders and beds. Large yellow flowers, June to September. 2 feet tall. Plant in fairly dry soil with plenty of lime. A plant of wide native distribution, but mostly in the Western Hemisphere.

**Orange Flame** —Reddish-orange, of great merit.

**Crimson**...

**White**...

**Double Choice Mixed** —This form is very beautiful, and is about 60% double.

**EUPHORBIA** (Snow-on-the-Mountain)

Culture 4 or 5. Normal germination, 10-12 days

**Variegata** —A foliage plant growing well in poor and dry soil. Leaves at first are bright green, but as plants mature become edged with silvery-white. 2 feet. Euphorbia is a North American native plant.

**Feuerfeu** —See Matricaria.

**Fire Bush** —See Kochia.

**Play** —See Linum.

**Forget-me-not** —See Myosotis.

**Four-O'Clock** —See Marvel of Peru.

**Foxglove** —See Digitalis.

**GALLARDIA** (Blanket Flower)

Normal germination, 10-20 days

These Gallardias are half-hardy, free-flowering perennials and annuals. The flowers are a very showy combination of orange, crimson and purple, blended and streaked in various markings. They are good bedders, being strong, constant bloomers through the whole summer. Prefer light, well-drained soil, and full sunlight. 24 inches tall. Native to North America.

**Grandiflora Fine Mixed**...

**Single Pieta Fine Mixed**...

**Double Pieta Lorenziana Mixed**...

**Indian Chief** —Beautiful bronze-red of good habit.
GERBERA (Transvaal Daisy) □
Culture 4 or 5. Normal germination, 20-25 days
New Giant Hybrids Mixed—A very beautiful daisy-like flower in many delightful colors, and borne on long stems; ideal for cutting. Seed should be sown individually, with the point up, in a greenhouse or hotbed. Germination is uncertain, and plants need careful handling. When leaves are an inch long, transplant to a sunny and protected location. Requires protection over Winter. Native of Africa. 25 seeds 25

GERANIUM ZONALE □
Culture 4 or 5. Normal germination, 15-20 days
An excellent grade of plants can be raised from seed which gives a wide variety of color. Should be started indoors, 2 feet. The Geranium is believed to be of South African origin.

GODETIA (Satin Flower) □
Culture 1 or 2. Normal germination, 6-10 days
Dwarf Azalea Flowered Double Mixed—These do best in rather poor soil, and bear double satiny flowers in many rich colors. Do well in partial shade. If cut out before fully open, the flowers will last a long time in water. 12 inches. This plant does much better if started indoors, and transplanted when 2 or 3 inches tall. California native.

GOMPHRENA (Globe Amaranth)
Culture 1, 4 or 5. Normal germination, 10-15 days
Well-known annuals of easy culture. To preserve for winter decoration, the flowers (resembling clover heads) should be fully matured before being gathered. 15 inches tall. Indigenous to many of the world's tropical sections.

GOURDS (Ornamental) □
Culture 1, 4 or 5. Normal germination, 12-15 days
The Gourds are annuals, rapid growers, from 10 to 20 feet high, valuable for covering screens or arbors; should have moist, rich, loamy soil to attain perfection. The fruit is useful for decoration, due to its unique appearance. Native to many of the world's tropical sections.

Small Mixed Gourds—All sorts. 1 oz. 25 pkt. 10

GYPSOPHILA (Baby's Breath) □
Culture 4 or 5. Normal germination, 15 days
Grandiflora Alba—True Covent Garden Strain—Culture 1 or 2. Graceful in a tropical setting, demand for cutting and combining with other flowers. Light, airy foliage, with myriads of small white flowers. 2 feet. Does not transplant easily. Native in Europe, Asia and Northern Africa. 1 oz. 20 pkt. 5
Paniculata (Perennial) □—Culture 3. Produces masses of small white flowers which are fine for cutting, or may be dried for Winter use. Dried flowers may be made to look alive again, by wrapping in a damp towel, and keeping in a cool place for about 6 hours. 1 oz. 25 pkt. 10

HELICHRYSUM □
(Straw or Everlasting Flower)
Culture 4 or 5. Normal germination, 5-10 days
Double Mixed Colors—Everlasting flowers, size of a 5-cent piece. Useful for making winter bouquets. 3 feet. Is much improved by starting indoors, and setting out after danger from frost is past. Is indigenous to many parts of Europe. 1/2 oz. 10 pkt. 10
HELianthus—See Sunflower.

HELIOPOUSE □
Culture 4 or 5. Normal germination, 30 days
Abeo's Choice Mixed—Very fragrant, grown as a bedding and pot plant, half-hardy perennial. Best treated as an annual. Prefers a light, rich soil. 2 feet. Grows wild in Peru. 1/4 oz. 55 pkt. 15
Hesperis Matronalis—See Sweet Rocket.

HERBS—See Vegetable Section, Page 38.

HIBISCUS (Mallow) □
Culture 3. Set out Sept. Normal germination, 12-15 days
Giant Mixed—Robust growing plants producing large cup-shaped blooms in shades of pink, red, yellow and white, during August and September. Excellent for hedging or background use. 1/2 oz 35 pkt. 19

HOLLYHOCK (Althaea rosea) □
Culture 3. Set out Sept. Normal germination, 10-30 days
One of the best perennials for a screen. Nothing better for background or among shrubs. Blooms sometimes first year; always second year. 5-8 feet tall. Will grow anywhere. Originally from the gardens of the Old World.

HELIANTHUS—See Sunflower.

HUNNEMANIA (Mexican Tulip Poppy) □
Culture 1 or 4. Normal germination, 15-20 days
Small Sunlite—Flowers and foliage somewhat resemble Eschscholtzia, but are larger and sturdier. The extra row of petals gives the appearance of being open at all times. Sown in early May, will bloom from July until frost. Prefer a sunny, well-drained border. Splendid for cutting. Buttercup yellow, with orange stamens.

IBERIS—See Candytuft.

ICOMOEA—See Morning Glory.

KOCHIA (Fire Bush) □
SUMMER CYPRESS OR BELVIDERE
Culture 1, 4 or 5. Normal germination, 10 days
The seed should be sown when the Oak trees are bursting into leaf. The plants develop very rapidly, finally reaching three feet in height, and forming perfect globes of green, feathery branches, which turn red after frost. Anyone can grow this plant in almost any situation, and we accordingly recommend it most highly. An annual hedge plant. 3 feet. Native both in Europe and United States.
Childsii—Extraordinarily showy; green; red after frost. Newest, best type. 1 oz. 20 pkt. 5

KUDZU VINE □
Culture 3. Normal germination, 60-180 days
Pueraria Thunbergiana—8-10 feet the first season. When well established, grows 40-50 feet a year. Large beautiful, purple, rose-purple clusters of rose-purple blossoms in warm climates, but seldom flowers north of Washington, D.C. Grows well in poorest soil. Top dies back in Winter.Prefers a sunny, well-drained border. Splendid for cutting. Buttercup yellow, with orange stamens.
IBERS—See Candaufut.

LADYSLIPPER—See Balsam.

LANTANA □
Culture 3 or 4. Normal germination, 30-180 days
Hybrida Mixed—A rapid growing perennial (treat as an annual) bearing verbena-like clusters of crimson, rose, yellow, orange and flame, which are followed by deep blue berries. 2 feet. Better start indoors for best satisfaction. Germination sometimes takes 6 months. First introduced from the West Indies. 1/2 oz. 25 pkt. 10

Small Ornamental Gourds

Small Ornamental Gourds

GYPSOPHILA (Baby's Breath) □
Culture 1 or 2. Normal germination, 6-10 days

Small Ornamental Gourds

GYPSOPHILA (Baby's Breath) □
Culture 1 or 2. Normal germination, 6-10 days

Small Ornamental Gourds

GYPSOPHILA (Baby's Breath) □
Culture 1 or 2. Normal germination, 6-10 days

Small Ornamental Gourds

GYPSOPHILA (Baby's Breath) □
Culture 1 or 2. Normal germination, 6-10 days
LINUM (Flax) □
Culture 3. Set out Sept. Normal germination, 10-15 days

GRANDIFLORUM PERENNIA—Dainty pale blue flowers. Easy to grow. Use much of their used recently, because their graceful, airy habit. 2 feet. Self-sows readily. European native. .......... ½ oz. 20 pkt. 10

LOVE-INA-MIST—See Nigella.
LOVE-INA-PUFF—See Balloon Vine.

LUNARIA (Honesty—St. Peter’s Penny) X
Culture 3. Set out Sept. Normal germination, 15-20 days

BIENNIS—This plant is grown for the seed pods, which are dried for Winter decoration. Self-sows readily. We can thank Asia for Lunaria. .......... ½ oz. 35 pkt. 10

LUPINUS □
Culture 3 or 4. Normal germination, 5-10 days

Beautiful border plants with interesting foliage and large spikes of flowers resembling sweet-peas, set closely together on the stalk. Prefers a well-drained soil. No garden complete without Lupines. 3 feet. Grows wild from Washington to California. The annual form does best when started indoors.

OD Polypyllus Blue □ ½ oz. 25 pkt. 10
OD Polypyllus White □ ½ oz. 25 pkt. 10
OD Polypyllus Roseus □ ½ oz. 30 pkt. 10
OD Polypyllus Regal Hybrids Mixed □ Pastel shades. ½ oz. 20 pkt. 10
Hartwegii Annual Mixed □ ½ oz. 20 pkt. 10

MALLOW—See Hibiscus.

MARIGOLD (Tagetes) □
Culture 1, 4 or 5. Normal germination, 5-10 days

When all other flowers are past their prime, Marigolds will still retain a glory of color. The dwarf varieties are ideal for bedding, while the taller types are valuable for cutting. Marigolds are shallow-rooted, and apt to be blown about unless staked. Easy to grow. In bloom for 90 days. Native from New Mexico to Argentina.

NEW) Gigantea Sunset Giants—A new, large double flower, 5-7 inches across, in shades of vivid orange, dark and light yellow and primrose. Sweet-scented, too. Will be hardy outdoors, but the excellence of the doubles will compensate for this. Long stems for cutting. ....pkt. 15

NEW) Harmony Dwarf Double—Scabiosa-like in formation, with tubular orange center petals, flanked by broad, fringed bracts. Semi-double, self-sown. ½ oz. 25 pkt. 10

NEW) Dixie Sunshine—Award-of-Merit in “All-America” Trials for 1936. This Chrysanthemum-like flower is ball-shaped, and composed of dozens of interlocking five-petaled florets giving a fringed effect. Plants are strong-stemmed and tall, and are smoothered with blooms. Early planting is essential. ....½ oz. 60 pkt. 15

NEW) Giant Double Mixed on Superior—All-America Gold Medal for 1935. Is lemon-yellow counterpart of the famous Guinea Gold, and like it is carnation-flowered and lacks the characteristic Marigold odor. Entirely essential. ....½ oz. 25 pkt. 10

AFRican Orange Ball—2½ feet. ....½ oz. 50 pkt. 10
AFRican Lemon Ball—2½ feet. ....½ oz. 50 pkt. 10
AFRican Tall Double Mixed—2½ feet. ....½ oz. 30 pkt. 5
French Dwarf Double—Orange. 10 inches. ....½ oz. 20 pkt. 10
French Dwarf Double—Lemon. 10 inches. ....½ oz. 20 pkt. 10

NEW) French Dwarf Double Mixed (Monarch Strain)—Dwarf compact growth with tight double flowers, in a large color-range, which includes combinations of orange, brown, yellow, scarlet and mahogany. 10 inches. Better if started indoors. ....¼ oz. 2½ pkt. 10

LEGION of Honor, or Dwarf Brownie—About 9 inches high. Fine for borders or massing. Flowers single, brilliant golden to maroon blending. Is quite late, but remains in bloom until frost. Best started indoors. ....½ oz. 25 pkt. 10
MARIGOLD □ Continued

(New) Tagetes Signata Pumila—"Little Giant"—This is a great improvement over the old strain, and is commonly known as Mexican Marigold. This plant is 4-6 inches tall, has a spread of 8-10 inches, and is covered over a very long period with small single orange flowers, with a darker orange center. Best for edging walks and paths, and for use in the Rock Garden. A favorite with Garden Clubs. .......... ½ oz. 25 pkt. 10

MARVEL-OF-PERU (Mirabilis jalapa) □

Culture 4 or 5. Normal germination, 8-20 days

Or, as it is generally called, Four-o'clock, because its flowers open late each afternoon. Flowers are fragrant, with desirable colors and fine markings. Makes a fine Summer hedge if set in rows a foot apart. Tubers may be lifted in the Fall, and stored like Dalilias, and replanted in Spring making larger plants with more flowers. 2 feet. Habitat is tropical America.

Mixed Colors .................................... ½ lb. 50 1 oz. 15 pkt. 5

MATRICARIA (Feverfew) □

Culture 2, 4 or 5. Normal germination, 10-12 days

Capsensis White—Early sowing will give bloom the first season. The double button-like flowers are ideal for cutting or bedding. June to October. 2 feet. Self-sows readily. A member of the Chrysanthemum group. Native in the Mediterranean region and the Orient. .... ½ oz. 25 pkt. 10

MIGNONETTE (Reseda) □

Culture 1, 4 or 5. Normal germination, 8-10 days

No annual is a more general favorite than the Mignonette. Of the easiest culture, it adapts itself to all situations, but prefers a cool rich soil in a shady position. Sow where wanted to grow, or else handle in pots, as they do not transplant well. Its greatest usefulness is in combination with those cut-flowers which lack the fragrance in which this flower so abounds. Reseda is found in Southern Europe, Northern Africa, the Canary islands, and some species in the U. S.

Allen's Defiance—The florist's favorite. Large spikes, very fragrant, and will keep for days after cutting, holding their fragrance, as the buds open daily. Fine for forcing. 9 inches high. ................. ½ oz. 20 pkt. 10

Goliath, Giant Flowered—Red. Plants pyramidal in form and very strong with exceedingly large flower-spikes. 12 inches .................................. ½ oz. 35 pkt. 10

Golden Yellow—Dwarf growth, highly colored; fragrant. ½ oz. 30 pkt. 10
MYOSOTIS (Forget-me-not)  
Culture 3. Set out Sept. Normal germination, 15-20 days
One of the most satisfactory early Spring flowers. They are perennials and quite hardy, although they do need some protection during very severe weather. Flourish in shady, moist situation. 6 inches. Native to both Europe and America.

DWARF ALPESTRIS BLUE .................................. ½ oz. 20 pkt. 10

CHINESE FORGET-ME-NOT—See Cyanoglossum.

LANDRETHS’ NASTURTIUM □
Culture 1 or 2. Normal germination, 8-10 days
“Black Bugs” may be kept off Nasturtiums by placing an ordinary camphor ball every 6 inches along the row. This should be done when plants are about 2 inches tall.

SPECIAL NOVELTIES
Double Sweet-Scented Nasturtiums
Originator’s Stock Only (Bodger)

Golden Gleam Double—A bouquet of these golden-yellow flowers, distinctly double in form, will fill a room with delightful fragrance, in addition to being a treat to the eye. Flowers are borne on 6 inch stems, held well above the foliage, which adds much to the appearance of the plant. Late planting is best, and this variety needs considerable moisture to bloom really well.

Dwarf Golden Gleam Double—Award of Merit for 1936 from “All-America” Council. Identical in color with the famous Golden Gleam, this new type is round, compact, easy culture. Is effective as the front row of a border, and this variety needs considerable moisture to bloom really well.

Orange Gleam Double—Flowers of a deep glowing orange, with distinct maroon blotch at throat. Fully double, and sweet-scented, too. 1 oz. 25 pkt. 15

Scarlet Gleam Double—Gold Medal Winner for 1935. Flowers of an intense fiery-orange-scarlet, and of very large size, held well above the foliage and of more pronounced fragrance than its parent, Golden Gleam Double. This variety needs a good deal of moisture for best blooming.

Moon Gleam Double—Pale lemon-yellow.

Salmon Gleam Double—Various tones of salmon-pink. 1 oz. 30 pkt. 10

GLORIOUS GLEAM DOUBLE HYBRIDS—Award of Merit for 1935. These Nasturtiums are the result of a “cross” between the famous Golden Gleam Double, and the old-fashioned single. Glorious flowers of salmon, golden-yellow, orange-scarlet, cerise, cream-yellow, orange, crinum, and gold flushed with scarlet combine with the fresh green foliage. Stems are long, and bear the flowers well above the leaves. Sweet scented, too. Like cool nights and considerable water...lb. 1.15 ½ lb. 35 oz. 15 pkt. 10

DWARF SINGLE NASTURTIUMS □
The Dwarf Sorts are adapted for beds and borders 8 to 12 inches.

LANDRETHS’ Dwart Mixed—A mixture of the best dwarf varieties, producing an agreeable effect.

A. 1 oz. 15 pkt. 10

These flowers require next to no care and thrive best in a moderately poor soil, enduring heat and dry weather remarkably well. The flowers are of all colors, from deep chocolate to nearly white. They are very effective when planted in borders and bloom from early summer until killed by frost. Sow where wanted to bloom, and thin out to 4 inches between plants. One ounce laws 30 feet of single row. Native from Mexico to Chile.

TALL SINGLE NASTURTIUMS □
Climbing 4 to 5 feet high

LANDRETHS’ Tall Mixed—A combination of the best tall varieties ..................................... lb. 1.00 ½ lb. 30 oz. 15 pkt. 10

Separate colors of both Dwarf and Tall Nasturtiums supplied on request

NEMESIA □
Culture 1 or 4. Normal germination, 20-30 days

Triumph Mixed (Nana Compacta)—Half-hardy annual. 1 foot tall, with orchid-like flowers in many colors, ranging from rose and yellow-orange to blue, pink, cream, crimson and lavender. Excellent for borders, bedding, and as a pot-plant. We can thank South Africa for Nemesia.

NEMOPHILA □
Culture 1. Normal germination, 10-15 days

Insignis Blue and White Mixed—Hardy annual of very easy culture. Is effective as the front row of a border, where it should be sown in patches where plants to flower. Six inches tall. A California wildflower. ½ oz. 20 pkt. 5

NAPETA (Mauve Catnip) ○
Culture 3. Set out Sept. Normal germination, 15-30 days

Musslnl Nana Compacta—Compact bushy bears terminal spikes of pale lavender-blue blossoms. Sow indoors early in spring and transplant to the garden at least 4 inches apart.

NICOTIANA □
Culture 1. Normal germination, 5-10 days

Alfinis Hybrids Mixed—This sweet-scented tobacco somewhat resembles a Potunia, but has a longer tube, and more pronounced petals. Opening toward evening, they emit a very powerful perfume. Blooms all summer and autumn, and shows shades of blue, red, white, rose and pink. 2 feet. Native of Brazil, Uruguay and Paraguay. ½ oz. 35 pkt. 5

NIGELLA DAMASCENA (Love-in-a-Mist) □
Culture 1 or 2. Normal germination, 10-15 days

Miss Jekyll—One of the best of the old-fashioned blue flowers. A free growing, profuse bloomer native of the North and South Temperate Zones (New crop seed ready July of each year.)
PANSIES □ Continued

**PETUNIAS**

Culture 1 or 4. Normal germination, 8-15 days

Annuals of extraordinary merit and easy culture, producing a fine effect by reason of the beautiful combination of colors. In the garden or green-house they flow'er in great profusion. Will grow in any soil, but the richer the soil the better the effect. They require a sunny position for best results. Fine for window boxes. **Yellows** instructions on packet carefully. As is not generally realized Petunias make excellent cut-flowers for low and flat bowls. Are wildings of southern South America.

**(New) Flaming Velvet—Wall All-America Gold Medal 1936.** Rich, velvety blood-red...

**Giant Tridarseau Mixed—**A distinct class of plants bearing enormous flowers...

**Triumph of the Giants—**This is as fine seed as is possible to procure, producing round bushy plants with long-stemmed flowers of enormous size. Petals are curled, and overlap each other in such a way as to appear almost double. Several new color-tones are met with in this mixture, notably new reds and browns...

Phlox is the showiest and most easily grown of all annuals. All our seed is specially grown for us, and we have the most complete list of colors in America.

Phlox grows well in any soil, requiring only plenty of sun, but is at its best in a rather light, sandy loam. It may be planted either in clumps or in rows, but shows its brilliancy to best advantage when grown in masses.

This charming flower may be sown under glass in March, and the plants set out in late May, or it can be sown where wanted to bloom, as soon as danger from frost is over. Its season is very long, being from early July until killed by frost.

Phloxes resemble zinnias in that they thrive with little or no care, and will stand all sorts of abuse. For best results, do not allow plants to stand closer to each other than 4 inches. Cultivation should be very shallow, as the roots are near the surface. Phlox is indigenous to many parts of the U. S. but particularly so to Texas.

(Perennial Phlox does not come "true" from seed, hence we do not list it.)

**TALL VARIETIES (Grandiflora) 12 to 15 inches**

- **Coccinea**—Brilliant crimson, very floriferous.
- **Alba Oculata**—White with maroon eye. ¼ oz. 35 pkt. 10
- **Atroviolacea**—Pansy violet with deep purple star; a true velvet Phlox. ¼ oz. 35 pkt. 10
- **Chamois Rose**—Newport Pink with deep salmon eye; very fine strain. ¼ oz. 35 pkt. 10
- **Chamois Rose Alba Oculata**—Choice salmon pink with white eye. ¼ oz. 35 pkt. 10
- **Splendens**—Bright scarlet with white eye. ¼ oz. 35 pkt. 10
- **Carnea**—White, suffused with pink, and deeper pink eye; particularly lovely. ¼ oz. 35 pkt. 10
- **Rosea**—Medium rose with red star; heavily flowered. ¼ oz. 35 pkt. 10
- **Kermesina Splendens**—Brilliant lipstick with white star and red eye. ¼ oz. 35 pkt. 10
- **Isabellina**—Coffee-and-cream or yellow; a most unusual color. ¼ oz. 35 pkt. 10
- **Atropurpurea Alba Oculata**—Crimson-purple with white eye. ¼ oz. 35 pkt. 10
- **Cinnabar Scarlet**—Brightest of all scarlets; very vivid. ¼ oz. 35 pkt. 10
- **•Striata Rosca**—Good rose with stripes and eye of white. ¼ oz. 35 pkt. 10
- **Striata Coerulea**—Blue with stripes and eye of white. ¼ oz. 35 pkt. 10
- **Striata Coccinea**—Red with stripes and eye of white. ¼ oz. 35 pkt. 10
- **Bloomsdale Grandiflora Mixed**—Really superb mixture with many light colors. ¼ oz. 30 pkt. 10
- **(New) Gigantea Art Shades Mixed**—All-America Award-of-Merit 1935. Lovely new pastel shades. ¼ oz. 60 pkt. 15
PHOLOX □ Continued

DWARF VARIETIES (Nana Compacta) 6 to 8 inches
□ Nana Cinnabarina—Best brilliant scarlet; unexcelled for edging. ¼ oz. 30 pkt. 10
□ Nana Meteor—Superb dwarf Newport Pink. ¼ oz. 30 pkt. 10
□ Nana Rose Carmine—Carmine rose with red eye; excellent for edging. ¼ oz. 45 pkt. 10

Boulevard Nana Compacta Mixed—Fine mixture of about 12 dwarf types. ¼ oz. 45 pkt. 10

Cupulata Mixed (Star of Queulnburg)—Perfect star-shaped flowers—12 inches tall. ½ oz. 25 pkt. 10

PHYSICALS (Chinese Lantern Plant) □

Culture 1 or 4. Normal germination, 10-15 days

Franchetl—Scarlet balloon-like pods which resemble a miniature lantern appear the second and following years. After cutting, remove leaves, and hang stalks sideways until flowers are fully open when they make interesting winter bouquets. S. E. Europe to Japan. ½ oz. 35 pkt. 10

PINKS—See Dianthus.

POPPY □

Culture 1 or 4. Normal germination, 10-15 days

Every garden should have a supply of Poppies. They fit almost anywhere and the perennial varieties remain for years. Sow seed in open ground in Spring or Fall, or may be sown on top of the snow, and thawing will take them down into the earth in Nature’s own way. Poppies may be used as cut-flowers, if cut just before the bud opens, which will open in water. Poppies in their various forms are found all over the world, but in Europe and the Orient more than anywhere else.

Carnation-flowered Double Mixed ½ oz. 25 pkt. 5
Rev. Wilke’s Selection Shirley Single Mixed ½ oz. 45 pkt. 10
Shirley Double Queen Mixed—Double flowered and very pretty. 1 oz. 35 pkt. 10

Double Scarlet King □—1 oz. 35 pkt. 10

Oriental New Hybrid Art Shades Mixed—Red, orange, salmon, pink, and white singles. ½ oz. 40 pkt. 10

Poaire—Carmine Louise—Delicate salmon-pink in Oriental type. ¼ oz. 45 pkt. 10

Iceland or Nudiea Sunbeam Hybrids Mixed—If sown in February will flower the same year and yield brilliant flowers all the season. Single. Is an early flowering giant strain from Australia. ¼ oz. 30 pkt. 10

CALIFORNIA POPPY—See Eschscholtzia.

PURPURIA THUNBERGIANA—See Kudzu Vine.

PORTULACA □

Culture 1. Normal germination, 8-10 days

One of the most showy and beautiful of border flowers, making a carpet of color. The seed germinates freely and flourishes in almost any situation, and self-sows from year to year. Sow where wanted to bloom. Does not grow over 4 inches high, but each plant spreads 10 inches wide. In the open they make a gorgeous bed, as they love the hot sun and a sandy soil; bloom for 20 days.

Finest Single Mixed ½ oz. 30 pkt. 10

Finest Double Mixed Colors—Resemble beautiful double Roses, though only two inches in diameter. Several colors, very showy, sow in beds. Will produce about 40½ single flowers. ¼ oz. 65 pkt. 10

PRIMROSE—See Evening Primrose.

PYRETHRUM—See Chrysanthemum.

RICHUS—See Castor Beans.

ROCK CRESS—See Arabis.

ST. PETER’S PENNY—See Lunaria.

SALPIGLOSSIS—Painted Tongue □ (Variabilis superbissima)

Culture 1 or 4. Normal germination, 10-15 days

This is a very early blooming annual 24 to 30 inches tall. Although the annual strain is rarely seen in flower, it is one of the very finest annuals. Out mixture covers a very large range of colors. Proves sweet-scented plant and partial shade. Salpiglossis was brought to civilization from the wilds of Chile.

Emperor Gloriosiflora Mixed. ¼ oz. 30 pkt. 10

SALVIA or SAGE □ □

Culture 4. Normal germination, 5-10 days

A half-ounce should raise 1000 plants. Sow seed in hotbed or box in nurse and plant out when ground is warm, or sow outdoors when the Apple is in bloom. In bloom 60 days. Likes full sun. The Sage offered by Landreth will produce, when well-grown, 150-200 spikes to the plant. These spikes are often 14 inches long. The scarlet varieties we owe to Brazil.

Splendeus (Scarlet Sage) □—¼ oz. 85 pkt. 10
Bonfire or Clara Bedman □—A fine variety, 24 inches high: forms a dense compact bush. Brilliant scarlet. ½ oz. 85 pkt. 10

POPPY □

Culture 1 or 4. Normal germination, 5-6 days

These vines grow 8-12 feet, and are covered all season with showy clusters of blossoms of brilliant scarlet. Excellent for covering fences or trellises. The beans which follow the flowers may be eaten while young and tender. A native of tropical American variety. 1 lb. 35 pkt. 10

SHASTA DAISY—See Chrysanthemum.

SNAPPDRAGON—See Antirrhinum.

SWAN RIVER DAISY—See Grevillea.

SWEET SULTAN—See Centaurea Imperialis.

SCABIOSA (Mourning Bride) □

Culture 1 or 4. Normal germination, 10-15 days

Plenishion Flower, known the world over as Mourning Bride. Easy culture; blooms all the season. Fine for cutting. 2 to 3 feet high. Long straight stems. Sow early for earliest flowers. Thrives in any good soil, and will not endure Northern Winters. Ideal in combination with lovely pastel shades in this mixture. 18 inches.

Agreatum Blue □—¾ oz. 20 pkt. 10

Blue Cookade □—¾ oz. 20 pkt. 10

Fire King Scarlet □—¾ oz. 20 pkt. 10

Peach Blossom Pink □—¾ oz. 20 pkt. 10

Loveliness—Salmon rose. ¾ oz. 20 pkt. 10

Shasta White □—¾ oz. 20 pkt. 10

Black Prince □—¾ oz. 20 pkt. 10

Boulevard Mixed. ¼ oz. 20 pkt. 5

SCABIOSA CAUCASICA □

Culture 3. Set out Sept. Normal germination, 10-25 days

Perennial Scabiosa is a most delightful novelty. Originally a native of Siberia, it has made a place for itself in the modern garden. With fine long stems, it keeps a long time in water. Flowers more than 3 inches across, which are produced all Summer on 3 foot stems.

Isaac House Strain Giant Hybrids—Blooms June to October. Large spikes of solid colors. Thrives in any good soil, and will not endure Northern Winters. Ideal in combination with lovely pastel shades in this mixture. 18 inches.

SHIZANTHUS (Poor Man’s Orchid) □

Culture 1 or 4. Normal germination, 5-10 days

Dr. Badger’s Hybrid Mixed—Seed germinates readily, and a very fine annual. The flowers are a mass of bloom. The finely cut foliage adds greatly to the attractiveness of the plant. Mainly pastel shades in this mixture. 18 inches.

STEVIA □

Culture 3. Normal germination, 10 days

Serrata White—Although a beautiful plant, this dainty, sweet-scented plant should be grown as an annual. Will not endure Northern Winters. Ideal in combination with bright colored flowers. Is found in Mexico, Central America and Haiti. ¼ oz. 60 pkt. 10

SNOW-ON-THE-MOUNTAIN—See Euphorbia.
STOCKS (Sometimes called Gilliflower)

Culture 4 or 5. Normal germination, 3-10 days

These are half-hardy annuals, beautiful, fragrant old-fashioned double flowers. Sow under glass or on warm border early in Spring, transplant to rich ground to which lime has been added. As only single Stocks produce seeds, no double strain can be had without a percentage of single flowers. Hot weather is responsible for the blind-growth which often disappoints outdoor growers of this crop, and they thrive best where the nights are cool. Our strain is remarkably well doubled. Stocks are native in Southern Europe and Southern California.

MAMMOTH EARLY BRANCHING DOUBLE NICE

Mont Blanc is the finest and most floriferous white sort. For garden, pot or cut-flower use, it cannot be equaled.

Hoz. 65 pkt. 10

American Beauty—Rose
Hy. 5 oz. 55 pkt. 10

Beauty of Nice—Flesh pink
Hy. 5 oz. 55 pkt. 10

Côte d'Azur—Lavender
Hy. 5 oz. 55 pkt. 10

Monte Carlo—Canary yellow
Hy. 5 oz. 55 pkt. 10

Souvenir de Monaco—Crimson
Hy. 5 oz. 55 pkt. 10

Mammoth Early Branching Mixed
Hy. 5 oz. 45 pkt. 10

STRAW FLOWER—See Helichrysum.

SUNFLOWER (Helianthus)

Culture 1 or 4. Normal germination, 5-10 days

The Sunflower is a well-known old-fashioned favorite, of late years wonderfully improved. The size and brilliancy of its flowers make it worthy of a place in every garden. Sow where wanted to bloom, and thin out to proper distance. Plant to hide unsightly objects. Indigenous to the western hemisphere, mainly North America.

Double Chrysanthemum Flowered—4 feet.
1 oz. 30 pkt. 10

Globosus Double Excelsior—Globe flowered, yellow dahlia-shaped, 6 feet.
1 oz. 30 pkt. 10

1 oz. 30 pkt. 10

Miniature (Cut and Come Again). . . . 1 oz. 30 pkt. 10

Russian Mammoth—For field culture. 8-10 feet.
1 lb. 20 ½ lb. 15 pkt. 5

SUNFLOWER, MEXICAN—See Tithonia.

SWAN RIVER DAISY—See Brachycome.

SWEET SULTAN—See Centaurea.

SWEET ROCKET (Hesperis matronalis)

Culture 3. Set out Sept. Normal germination, 15 days

Mixed—Delightfully fragrant in the evening. Bears spikes of purple and white flowers, very much resembling single Stocks. 18 inches. Desirable for wild garden, among shrubbery or in mixed border. Native of Europe, Asia and North America.

34 oz. 30 pkt. 10

HERBS

The greatly revived interest in Herb Gardening is easy to understand, as many Herbs have definite decorative value. A good assortment of them is listed on page 38.

SWEET WILLIAM (Dianthus barbatus)

Culture 3. Set out Sept. Normal germination, 8-10 days

These sweet scented perennials were favorites in our great-grandfathers' gardens. They bloom early in the Spring and continue in flower a long time. Plants are hardy and will bloom in August the first and second years, and their number may be increased enormously by dividing the roots. Prefer a rich soil. Native from the Pyrenees to Russia to China.

• Pink Beauty or Newport Pink—Exquisite shade of salmon-rose. Single
Hy. 3 oz. 55 pkt. 10

• Scarlet Deliance—Flaming scarlet single, of startling effect when grown in masses
Hy. 3 oz. 25 pkt. 10

• Snowcap—White single
Hy. 3 oz. 30 pkt. 10

• Single Mixed—1 foot
Hy. 3 oz. 29 pkt. 10

• Double Mixed—1 foot
Hy. 3 oz. 25 pkt. 10

• Annual Sweet William (Sweet Wivelsfield)—See Dianthus.

Perhaps the most outstanding novelty in years, is the new "Fantasy" Zinnia. This won an Award of Merit from the All-America Trials Council, and the shaggy and informal flowers (which somewhat resemble a cactus dahlia) are most interesting, and come in the brightest shades of yellow, red, and orange, as well as in the popular pastel pinks and creams. "Star Dust" is the first separate color in this new group.
SWEET PEAS □

Normal germination, 15-20 days

Sow in permanent location, in single row, two seeds to the inch, quarter-ounce of seeds for two yards of row; cover one inch deep

The first Sweet Pea was of the Grandiflora type, and was discovered in Sicily in the year 1095, whence it soon reached England. After years of hybridizing by Henry Eckford, many improvements were noticed. The Grandiflora type has almost passed out of the picture today, having been replaced by the Spencer variety, discovered in 1901 by Silas Cole, gardener to the Earl Spencer of Althorp Park, Northampton, England. This in turn has been improved on and we now have an Early Flowering Spencer which blooms 3-4 weeks earlier than the Late Flowering Type and continues in bloom much longer.

Culture: Sweet Peas are quite hardy, and may be planted very early in the Spring, or late in the Fall. They thrive best in heavily fertilized ground, and need considerable water on warm days.

Best results are obtained by sowing in the Fall, where Winters are not too severe, as with the resulting deep roots, the season of blooming is greatly lengthened. Sweet Peas do best when trained on trellises made of string. They should be thinned to about 8 inches apart in rows, while the rows should be 8 feet apart.

If planting in Spring, and space permits, it is advisable to make several sowings about one week apart, so as to provide for longer flowering season. Sweet Peas develop best only with a rainy season or with extensive watering. Keep seed pods clipped.

Named Varieties of Sweet Peas in Plain Packets Only

EARLY FLOWERING SPENCERS

For outdoor or greenhouse culture. This class should have more attention from home growers who may have been disappointed with the late flowering type. Blooming 3 to 4 weeks earlier, they are in full bloom before the Summer dry-spell arrives, and where nights are cool, they continue to bear for months.

Named Varieties are all 55c. oz., 10c. pkt.

- All White—Largest pure white.
- Ball's Rose—Rose pink.
- Blue Bonnet—Best clear deep blue.
- Harmony—Clear lavender.
- Imperial Pink—Large clear pink.
- Majestic Rose—Brilliant rose-pink, vigorous, long stems.
- Valencia—Sunproof bright orange, long stems.
- Vulcan—Most vivid scarlet and sunproof.

Early Spencer Bloomsdale Mixture 1 lb. 2.00 ½ lb. 60 1 oz. 20 pkt. 10

LATE SPENCERS

Named Varieties are all 25c. oz., 10c. pkt.

Here follow the varieties of Late Spencers which we consider are the best in their class. Please hold to this list in ordering.

- Austin Frederick, Improved—Frilled lavender.
- Barbara—Large orange salmon.
- Campfire—Bright scarlet.
- Commander Godsall—Rich violet-blue.
- Doreen—Bright rose carmine.
- Elfrida Pearson—Best shell pink.
- Flory Cross—Intense orange-scarlet, or military red.
- Glenagles—Very large, pale blue-lavender.
- Hero—A beautiful corise.
- Illuminator—Large rich orange salmon.
- Helen Lewis—Standard orange, wings rose salmon.
- King Edward VII—Rich crimson.
- King White—The best white, gigantic flowers.
- Mary Pickford—Cream pink, suffused salmon.
- Miss California—Deep cream pink.
- Mrs. Tom Jones—Large clear blue.
- Pinkie—Rose pink, immense flowers.
- Rosabelle—Bright rose, wavy large flowers.
- Senator—Claret and chocolate striped, heliotrope ground.
- Welcome—Dazzling scarlet.
- Wembly—Lavender and plumtango-blue.
- Youth—White edge, soft rose pink.

Late Spencers Choice Mixed 1 lb. 1.25 ½ lb. 40 1 oz. 15 pkt. 10

GRANDIFLORA TYPES

Grandifloras are best for use where weather is very hot, but in other respects, they cannot compare with the Spencers.

Landreths' Fine mixed 1 lb. 85 ½ lb. 25 1 oz. 15 pkt. 5

TAGETES—See Marigold.

EARLY SPENCER SWEET PEA VALENCIA

GRANDIFLORA TYPES

Though the development of the Zinnia has been marked since 1798 when David Landreth first brought it back from Mexico, those who are curious to see the type from which the present large flowered forms were developed, may do so by planting Zinnia Haageana Mexicana, for these are nearest to the great-great-grandparents of this most satisfactory and useful flower.
THUNBERGIA (Black-Eyed Susan)

Culture 1, 4 or 5. Normal germination, 10-15 days

Alata Mixed—A trailing and climbing plant with large showy flowers. Colors embrace all shades of yellow, orange, buff and white, almost all with black centers. Makes a good ground-cover, too, on sunny banks. 4 feet. Grows wild in South Africa

TITHONIA □

Culture 4 or 5. Normal germination, 5-10 days

Speciosa (Mexican Sunflower)—Though really a perennial, this plant is best started indoors in the northern states, and treated as an annual. Coming from Mexico, it is a rare and handsome thing and ideal for the background of a wide border. Flowers are a huge dazzling orange-scarlet, 3-4 inches across, and resemble a single Zinnia. 5 feet tall. Native to Mexico and West Indies.

TRITOMA (Torch Lily or Red Hot Poker)

Culture 4 or 5. Normal germination, 30 days

Hybrids—Handsome and showy border subjects, resembling orange spear-heads. Requires protection during Winter. Native of Africa.

TORENI A □

Culture 1 or 4. Normal germination, 10-15 days

Fournieri—Round bushy plants about 10 inches tall, with very attractive flowers somewhat like Snapdragon, of a beautiful sky-blue and violet, with a yellow lip. An excellent border substitute for pansies. Likes plenty of moisture. Native of Cochin-China.

TUFTED PANSY—See Viola Cornuta.

VINCA (Madagascar Periwinkle)

Culture 3, 4, or 5. Normal germination, 10-12 days

Valuable for pot culture or for borders, tender annual. 1 foot. Seed often germinates slowly. Roots may be taken up in the Fall, potted, and flowered indoors during the Winter. Foliage a shiny dark green, somewhat like that of a gardenia. Native of the Island of Madagascar as well as other tropical spots.

Alba Pura—Pure white

Alba Rosea Oculata—Waxy white, with deep rose eye

Rosea—Rose petals, crimson eye

Mixed

VENIDIUM (Monarch of The Veldt)

Culture 4. Normal germination, 30 days

Fastuosum—2-3 feet. Daisylike flowers 4-5 inches across, with a double row of brilliant orange petals with center zone of purple-black. Sow in March or April in a sunny position, or can be started indoors for earlier bloom. Foliage silky gray. Grows wild in South Africa.

Hybrids Mixed

VERBENA □

Culture 4 or 5. Normal germination, 10-15 days

The Verbena is a well-known annual of creeping habit. Partially upright, but when prostrate taking root freely where stems come in contact with the ground. Excellent for bedding. In bloom 90 days.

Sow the seed one-quarter inch deep in a box of light rich soil. Start in February or March under gentle heat of hot-bed or even in sunny window, and after hardening-off transplant the seedlings in May or June in open ground in good rich soil. Verbena are found nearly all over the world. The origin of the garden variety, however, is unknown, as it is believed to be a multiple hybrid.

Gigantea Lavender Glory—All-America 1933.

Gigantea Blue Shades

Gigantea Firefly or Scarlet

Gigantea Pink Shades

Gigantea White

Gigantea Choice Mixed

Beauty of Oxford Hybrids—Shades from rose pink to rose red. Astonishingly brilliant.

VERONICA (Speedwell)

Culture 3. Set out Sept. Normal germination, 15-20 days

Spicata—Bears small spikes of rich blue flowers in July and August. Exceedingly attractive plants 2-3 feet tall. Native in Northern Europe and Asia.

Mixed

VIOLA CORNUTA

Culture 3. Set out Sept. Normal germination, 8-10 days

Tufted Pansy Mixed—This plant is often mistaken for a small-size pansy. It belongs to the same family, but is quite different, for the petals do not overlap nearly so much as in the pansy. The season is longer, and the plants are much more hardy. A gem for rock gardening. Clear colors of yellow, white, terra-cotta, rich purple, lavender, apricot; and rose. Keep flowers cut to promote continuous bloom.

Mixed
WE ARE HEADQUARTERS FOR ZINNIA SEED

**VISCARIA**

Culture 4 or 5. Normal germination, 15-30 days

- **Blue Pearl**—A new introduction from England. Semi-dwarf, and pure lavender-blue, this plant is ideal for mass effects. 1/4 oz. 50 pkt. 15

**WALLFLOWER (Cheiranthus)**

Culture 4 or 5. Normal germination, 5-10 days

Thriving in poor soil, the Wallflower is a half-hardy perennial, producing beautiful fragrant flowers, mostly yellow, orange, and brown. Requires protection during the Winter. Blooms first year if sown early. 18 inches. Excellent for planting against wall with southern exposure Native in many parts of Europe.

- **Large Flowering Single Mixed**
- **Siberian Wallflower**—Brilliant orange. Single. 1/4 oz. 15 pkt. 10

**ZINNIA**

Culture 1 or 4. Normal germination, 5-10 days

Johann Gottfried Zinn, a German, in 1757 published a "Catalogue of the Plants in the Garden of Gottingen" listing this plant for the first time anywhere, and giving it his name.

The Landreths, who introduced the Zinnia to commerce use more than 100 years ago, feel that their strain is unsurpassed by that of any seedman. All our seed is California-grown, under the most careful supervision of experts. Our "Bloomsdale Mixtures" are not "grown-as-mixtures" as is often the case, but are made up only of the very best named varieties, which have been grown as separate colors. This assures a much wider color-range than is possible by the common method.

Blooms from July to frost. Seeds can be planted in the open, or sown indoors and the young plants transplanted if desired. Dwarf varieties should stand about one foot apart, and tall varieties double this distance. Will grow anywhere and stand any amount of rough treatment, and is immune from disease. Very ornamental and satisfactory as a cut flower. Plant in July to get the largest and best flowers.

**DOUBLE GIANTS MIXED—3 ft.**

(Improved Grandiflora Robusta)

3/4 oz. 25 pkt. 5

- **HAAGEANA MEXICANA HYBRIDS DOUBLE MIXED**

More nearly like the true Mexican variety (which was the parent of the large flowered Zinnia) than any other. Flowers small and plentiful, in yellow and mahogany-red and their variations. Excellent for arrangement in low bowls. 12 inches tall. Early planting is best. 1/4 oz. 50 pkt. 10

**GIANT DAHLIA FLOWERED—3 to 4 ft.**

(Awarded a Gold Medal by The Royal Horticultural Society of England)

A new race of this attractive flower. Blooms measure about 4 inches in depth and, under very favorable conditions, will reach 7 inches in diameter. They closely resemble Dahlia in appearance, and are the most popular of all varieties we grow. They are best for bedding purposes.

**Gold Medal Strains**

- **Canary Bird**—Primrose-yellow. 3/4 oz. 40 pkt. 10
- **Celosin Monarch**—Deep crimson. 3/4 oz. 40 pkt. 10
- **Dream**—Deep lavender. 3/4 oz. 40 pkt. 10
- **El Dorado**—Salmon-apricot. 3/4 oz. 40 pkt. 10
- **Exquisite**—Light rose, shading to deep rose. 3/4 oz. 40 pkt. 10
- **Illumination**—Deep rose self. 3/4 oz. 40 pkt. 10
- **Golden Dawn**—Golden yellow. 3/4 oz. 40 pkt. 10
- **Old Rose**—Real old rose shade. 3/4 oz. 40 pkt. 10
- **Orlole**—Golden-orange bicolor. 3/4 oz. 40 pkt. 10
- **Polar Bear**—Pure white. 3/4 oz. 40 pkt. 10
- **Purple Prince**—Deep purple. 3/4 oz. 40 pkt. 10
- **Scarlet Flame**—Bright orange-scarlet. 3/4 oz. 40 pkt. 10
- **Bloomsdale Gold Medal Mixture**
- **Landreths' Pastel Shades Mixed** 3/4 oz. 50 pkt. 10

**CALIFORNIA GIANTS—3 to 4 ft. (Giant Mammoth)**

The symmetrical flowers of this variety are large and very pleasing. The petals are more loosely placed than in the Dahlia type, giving the effect of a neater, flatter center, thus serving to accentuate the great size of the flower. These are better for cutting than the Dahlia Flowered type, as the stems are longer.

- **Grenadier**
- **(New) Daffodil**—Canary yellow. 3/4 oz. 40 pkt. 10
- **Orange Queen**—Golden orange. 3/4 oz. 40 pkt. 10
- **Purity**—Best white of all Zinnias. 3/4 oz. 40 pkt. 10
- **Rose Queen**—Bright rose. 3/4 oz. 40 pkt. 10
- **Miss Willmott**—Soft shrimp-pink. 3/4 oz. 40 pkt. 10
- **Scarlet Gem**—Glowing scarlet. 3/4 oz. 40 pkt. 10
- **Violet Queen**—Deep purple. 3/4 oz. 40 pkt. 10
- **Bloomdale Finest Mixed**
- **Landreths' Pastel Shades Mixed** 3/4 oz. 50 pkt. 10

**NEW DWARF PUMILIA**

- **(New) EARLY WONDER—2 ft.**

- **(New) CROWN O' GOLD—3 to 4 ft.**

**NEW DWARF PUMILIA MIXED—2 ft.**

This type is quite a change from the usual Zinnia, in that the petals are beautifully twisted and curled, giving an appearance of a cactus dahlia. Excellent for bedding and cutting, though the color range is rather limited. 1/4 oz. 40 pkt. 10

**NEW EARLY WONDER—2 ft.**

- **Fandango**—Is a fiery, salmon cerise pink, and is the first of a new race of dwarf, early flowering Zinnias, producing masses of small pumila type flowers on long stems. Ideal for cutting. Other colors are in course of development. 3 feet. 1/4 oz. 70 pkt. 10
- **Gypsy**—Burnt-orange. 1/4 oz. 70 pkt. 10
- **Rose Pink**—Soft clear pink. 1/4 oz. 70 pkt. 10
- **Finest Mixed**—Produces a profusion of medium size flowers on long stems, with very little foliage, in new shades of orange, lavender, reds and pinks. 1/4 oz. 60 pkt. 10

**VICTORY CACTUS FLOWERED MIXED—2 ft.**

This type is quite a change from the usual Zinnia, in that the petals are beautifully twisted and curled, giving an appearance of a cactus dahlia. Excellent for bedding and cutting, though the color range is rather limited. 1/4 oz. 35 pkt. 10

**CROWN O' GOLD—3 to 4 ft.**

Mixed—This aristocrat among Zinnias is an outstanding novelty. Each petal is overlaid with deep golden yellow at the base, while carrying out the individual flower color at the tip. The color range includes the popular shades of old rose, cream, yellow, carmine red, buff, pink, etc. is not yet entirely "fixed" in type. 1/4 oz. 60 pkt. 10

- **(New) Desert Gold**—Yellow and gold shades, in which each petal is overlaid at the base with a deeper golden-yellow, giving a charming bicolor combination. Those who appreciate the finest in Zinnias will welcome Desert Gold. 1/4 oz. 40 pkt. 10

---

Zinnia Dahlia Flowered "Exquisite"
Zinnia Lilliput

**IMPROVED DOUBLE LILLIPUT OR POMPON ZINNIA** — 12 to 15 inches
*(Special Florist's Stain)*

This charming strain is daily becoming more popular. Dwarf and very bushy, it is the ideal bedding variety. Extremely double and almost ball-shaped flowers, in color tones not usually found in other types. The daintiness of its large number of tiny flower-heads (1½ inch) makes it particularly desirable for cutting.

Canary Yellow ..................... ½ oz. 25 pkt. 10
Golden Orange ..................... ½ oz. 25 pkt. 10
Valencia — Burnt-orange ........... ½ oz. 25 pkt. 10
Purple Gem ....................... ½ oz. 25 pkt. 10
Salmon Rose ....................... ½ oz. 25 pkt. 10
Rosebud — Rose-pink .............. ½ oz. 25 pkt. 10
Scarlet Gem ....................... ½ oz. 25 pkt. 10
White Gem ........................ ½ oz. 25 pkt. 10
Bloomsdale Mixed ................. ½ oz. 25 pkt. 10
*Landreths' Pastel Shades Mixed* ½ oz. 50 pkt. 10

**MIXED TOM THUMB MIDGETS** — 6-12 inches

This variety is even smaller and better for bedding than the Lilliput type, and can be used as a pot-plant. Flowers very heavily and blooms are only one-half inch across. Stems long enough for arrangement in small vases or bowls. Unusual color variations ½ oz. 50 pkt. 10

**ISABELLINA (NEW)** — 3 ft.

This variety is a delightful shade of coffee-and-cream yellow. Flowers are quite large, and splendid for cutting. They are of the Grandiflora Robusta type, and resemble Phlox Isabelina in color. ½ oz. 25 pkt. 10

**FANTASY** — 2-2½ ft.

Mixed — "All-America" for 1935. The new selection has flowers composed of a mass of shaggy, ray-like petals, large enough for massing, and small enough to lend themselves gracefully to flower arrangement. Comes in brightest shades of red, yellow and orange, as well as in the popular pastel pinks and creams. ½ oz. 50 pkt. 10

*New* Star Dust — All-America Award of Merit for 1937. Deep golden yellow. First separate color in Fantasy group. ½ oz. 50 pkt. 10

The year 1798 was an important one for floriculture, for in that year David Landreth brought the Zinnia, America's most popular garden flower, to the attention of the gardening public.

Of all flowers grown, the Zinnia is perhaps the easiest to handle. The seeds sprout 5-10 days after sowing, grow very rapidly, and begin to bloom in a little more than 8 weeks. They are very tolerant of soil conditions, and will grow almost anywhere, and though they like best to be in full sun, they do very nicely in semi-shaded positions.

When thinning-out, the surplus seedlings can be easily transplanted elsewhere; in fact, these plants can be moved without injury even when in full flower.

With the exception of Japanese Beetles (which eat the foliage, but not the flowers) Zinnias are not troubled by insect pests, nor are they subject to any plant diseases. These things have contributed to make this already highly popular plant continue to increase in worldwide esteem.

There are variations in color and form to please every taste, from the dazzling scarlets for those who like their colors bright and definite, to the soft pastel shades for those who are more esthetically inclined. They range in size from the huge Dahlia-Flowered and California Giant types, down through the Grandiflora Robustas, Elegans Pumilas, Lilliputs, and finally the tiny Tom Thumbs, which are smaller even than Lilliputs, the flowers being only one-half inch across.

There is also a new early flowering strain adapted particularly to cutting, known as Early Wonder. The flowers are of medium size, the stems straight, long, and almost devoid of any foliage, and this year they may be had in fiery salmon cerise pink, rose pink, burnt-orange, and in mixture. Within a short time it is hoped that a full color range will be available in this new type.
Mr. E. C. Auchter

Washington, D. C.

Dear Sir:

THE D. LANDRETH SEED COMPANY GIVES NO WARRANTY, EXPRESS OR IMPLIED, AS TO DESCRIPTION, QUALITY, PRODUCTIVENESS OR ANY OTHER MATTER OF ANY SEEDS (BULBS OR PLANTS) IT SELLS AND WILL NOT BE RESPONSIBLE FOR THE CROP. ALL SALES SUBJECT TO LOSS OR DAMAGE BY FIRE OR OTHER CONTINGENCIES BEYOND OUR CONTROL.

We are pleased to acknowledge receipt of your circular of the 8th, in regard to our sending you the various catalogues and price lists which we publish. We are naturally happy to comply with this request and are sending under separate cover:

Our 1937 Garden Annual  
Descriptive Booklet of Canners Varieties with Prices.  
Circular on Certified Tomato Seed.  
Circular on Certified Pepper Seed.  
Wholesale Dealers Price Book.  
Large Buyers Yellow Wholesale Price List.  
General Spanish Catalogue (Published in 1927).  
New Spanish Descriptive Catalogue (Published in 1936).

You will note that we have made up our price lists for this year to conform to our understanding of the Robinson-Patman Act. We intend to stick to these quantity prices, but it is becoming increasingly difficult as a majority of wholesale seedsmen do not seem to know that any such law exists.

Please let us know whenever we can be of assistance in any way.

Yours very truly,

[Signature]

LANDRETHS' SWEET CORN SINGLE CROSSES
AND TOP CROSSES
(See Page 24 and Following Pages for Particulars)

Bancross P39 (Golden Bantam Top Cross)—83 Days. We recommend this to all growers since it produces a greater yield per acre than does ordinary Golden Bantam.

Bloomcross P39 (Bloomsdale Golden Top Cross)—89 Days. This is of high yield and high quality. Our own introduction and worthy of trial.

Golden Cross Bantam—86 Days. Our strain of this famous single cross is exceptionally fine compared with some on the market.

Bancross P39 (Golden Bantam Top Cross)—83 Days. We recommend this to all growers since it produces a greater yield per acre than does ordinary Golden Bantam.

Bloomcross P39 (Bloomsdale Golden Top Cross)—89 Days. This is of high yield and high quality. Our own introduction and worthy of trial.

Golden Cross Bantam—86 Days. Our strain of this famous single cross is exceptionally fine compared with some on the market.

Please Pass the Butter! Spancross P39 Ready to Eat

Spancross P39 (Spanish Gold Top Cross)—79 Days. One of the best of the early goldens. Do not confuse our stock with that often sold under this name.

Whipcross P39 (Whipple's Yellow Top Cross)—83 Days. Where open-pollinated Whipple's Yellow cannot be grown profitably, try this Whipcross.

LANDRETHS' NEW SWEET CORN HYBRIDS
Advance Notice—For Sale in 1938 But Not Before

We have developed, on our Bloomsdale Farm, after 8 years of breeding and testing, in addition to the 5 years which our plant breeder, Hal Mills, worked on the Cornell University Research Farm on Long Island, a few single golden crosses or inbred hybrids which should be tried by all gardeners and canners. Besides those described here, we will have a few others for trial in a small way. Keep in touch with D. Landreth Seed Co. for the most up-to-date hybrid sweet corn seed for gardeners and canners. We are the only seedsmen who will have this seed for sale. You must buy it in our specially sealed blue packages.

Millscross A—A single cross between two of our best inbreds from Golden Bantam. Almost 100% 8-rowed ears, with an exceptionally heavy yield of good sized ears. In a test in Connecticut in recent years, Millscross A produced the highest number of ears per acre of any variety in the trial. The ears are uniform and the quality is excellent.

Millscross B—Another single cross of Golden Bantam Inbreds. This hybrid produces practically all 8-rowed ears of very large size for Golden Bantam. Good yield and quality.

OTHER HYBRIDS

We will have other combinations for trial in 1938 of Mills' Golden Inbreds with standard, open-pollinated varieties, and other experiment station inbreds. Write to D. Landreth Seed Co., Bristol, Pa., for particulars.
